Thread: [\[TuT\] How to dos attack your steam friends tutorial](#)

xSwitchx - April 21, 2013, 8:38 am

In this tutorial i will show you how to obtain the IP addresses of any of your steam friends.

This is my first thread/tutorial btw.

[Video: <http://www.youtube.com/watch?v=oCTQw16LtZo>]

1. You will need Wireshark and a program to make a dos-attack with
2. You open Wireshark and choose your network adapter
3. Then apply classicstun to filters
4. Open a chat with someone on steam and call the person (let the calling be 3 sec or so)
5. In Wireshark you will see a bunch of IP's now, you can use <http://whatismyipaddress.com/> to determine what your victims IP is
6. Now just open a booter/a dos-program and attack the ip on port 80

PM me for any questions.

andq1 - April 21, 2013, 12:57 pm

actually a pretty smart method, thanks for the tip:)

KaranMohadkar - April 21, 2013, 1:40 pm

Better Use CommView that will be more easy :/

xSwitchx - April 21, 2013, 1:56 pm

Well CommView only works for windows, Wireshark works for several OS's

aw123 - April 21, 2013, 6:47 pm

I tried using it with a VPN and i experience. My friend did not go offline, My PC lag And my Steam goes offline.

I did get the correct IP because there is only two ip and 198.XXX.XXX.1 is obviously mine and the another is your friend IP.

Hi are you using a online booter or dos-program that's using your own network? Cuz right now it's sounds like your using your own, and if so i think the problem is that his network download/upload is greater than yours, and therefore you can't take him down.

the problem is that his network download/upload is greater than yours, and therefore you can't take him down.

I did use OverDos, I only have 1mb download per sec and 0.52 upload per sec.

Well there you have your problem, you either need a better connection, a bootnet you can boot with, or a online booter :)

(Apr 22, 2013 03:05 AM)xSwitchx Wrote: [\[CITE\]](#) Well there you have your problem, you either need a better connection, a bootnet you can boot with, or a online booter :)

Can 10mbps download per sec fix the problem?

xSwitchx - April 22, 2013, 8:52 am

<http://bootdem.co.uk/login.php> is a good booter ;)

A botnet is most often something you make yourself, by gathering a lot of slaves/bots

Gewaldo - April 23, 2013, 6:04 am

Very nice and useful tutorial. Thanks for sharing!

Or just use a steam resolver that works to! ;)

xSwitchx - April 23, 2013, 11:44 am

Lol Steam resolvers don't work at all, they can only give you the IP your victim had at some point,

but commenly they can't give you the one he or she have have right now :D

BossKiddo - *April 23, 2013, 11:45 am*

Seems like a fairly good method! I'll for sure use this.
