Thread: [How to add shells to a booter?](#)

CreepyPasta - April 22, 2013, 8:04 am

I have JeeJee's booter, as mentioned earlier with a problem.
But I think I have found the problem, as I don't have any shells.

I need to know how and where to put shells though.
And I also need some if anyone has or knows where to get them.

Thanks.

Numinous - April 22, 2013, 8:05 am

you have to find the shells from google but google results gives you only public shells otherwise buy private shells.

What's the difference in Public Shells and Private Shells?

The shells which are publically available for everyone are called as public shells.
and the shells which are private in nature are called as private shells means no body uses that shells .

?????? - April 22, 2013, 8:12 am

public shells are used by other people. most are weak and die out quickly. private shells mean only you, or a select few are using them and they are often much stronger and last longer. also it depends on what server the shell is on. a "shell" is basically a script installed on a server that allows you to send a command to the server to ddos. one good private shell can do the job of 100 public shells.

CreepyPasta - April 22, 2013, 8:14 am

Ok, I added shells. Not sure if they're public or private, but I still got this error when Initiating an attack:

No data received

Unable to load the webpage because the server sent no data.

Here are some suggestions:

Reload this webpage later.

Error 324 (net::ERR_EMPTY_RESPONSE): The server closed the connection without sending any data.

Contact the owner or JeeJee and ask him/her

I keep getting the error as well. Have you fixed it? And if you have could you pm me the way to fix it?

Flaaffy - June 7, 2013, 12:13 pm

its because the server is closing the connection early, possibly due to recognising a malicious command
