Thread: [Spreading with Torrents, What Files to Target](#)

itsmemario - April 27, 2013, 5:23 am

Hello hackforums.

I have been trying to spread with torrents, I realized you can only bind your RAT to Another .exe, You can Bind to Mp3, Or application which require an installation.

Well i cant do it anyway and every good program requires to install the program, Only way to bypass is to just chuck your rat in there and name it Password, And lock the other files, Which makes is look fishy as fuck.

Anyone know good exe's i can target to bind to my rat. Torrents work pretty good, I want to do them right.

D4rKn3s5 - April 27, 2013, 7:06 am

Download something like photoshop and just bind your server or a downloader to it. As for trying to spread with music, movies, and books I never really tried cause any type of executable that included in a download for one of those types of files is way to fishy.

itsmemario - April 27, 2013, 7:30 am

How can i download photoshop and bind my rat onto it, Do you mean Bind my rat onto the .exe of photoshop itself, And thats a big Folder to spread with photo shop is couple of Gb

D4rKn3s5 - April 27, 2013, 7:55 am

Yes that's what I mean. Granted it's a large file to spread with, but think about it, a lot of people like and download photoshop. Most people don't expect something that large to be infected with a virus. You could also just try spreading as a patch to a game or another program. Pretty much just use your imagination when it comes to spreading.

I was going to do Photoshop, But its going to take too long, Any suggestion on Files, Like i need a exe to bind, its gay you cant bind nothing else.

I want something legit that actually opens :(Any help is awesome

InspectorGadget - May 4, 2013, 4:52 am

Just upload the legit file and bind your RAT to a fake crack. It's pretty simple :)

Do Winrar, everybody looks for winrar.

Examine - May 4, 2013, 5:17 am

I recommend using photoshop as a torrent spreading method.

But, If you want gamers (for their CD Keys, to either sell or keep them, keep in mind you can NOT sell CD Keys on hackforums.) I'd suggest Star Craft3, Dead Island Riptide, and The Walking Dead: Survival Instinct. Just bind your RaT to the executable of either of those (or all of them, either one.) and upload it. Then, if the RaT you're using supports the "Torrent Seeding" function, the slaves you

get, force them to seed your torrent.

You would wonder how good this works...

Put the actual file(s) in an archive and secure it with a password.

Make your RAT give out a message like "Password: XX", and name it Password Generator

Put your locked archive and the fake password gen in an archive without a password ;)

Sounds fishy, but actually 80-90% of the internet users are just dumb and dont think that far

itsmemario - May 5, 2013, 3:00 am

I have tried the password trick it dosent work when you Archieve folder then leave the password out, it fucks it up.

I have Downloaded 3 Photoshops, Microsoft word nothing is working ! everything is Complied there is not startup then a sperate EXE so i can bind my file its starting to piss me off i have been trying for 3 days, You cant bind it to anything its bullshit

I tried Cd keys i got banned btw lol

Alright so i Binded a keygen and the bitches ran through sandboxie -_-

itsmemario - May 10, 2013, 3:33 am

Hey again, I have tried so many sites, its fully Binded, And Fully FUD, They must have Mods/admins on those torrents sites 24/7 checking files.

Torrents are not working for me :(

Effexion - May 10, 2013, 3:37 am

I used to do well with 'keygens' for brand new games:

<https://hackforums.net/showthread.php?tid=693661>

itsmemario - May 10, 2013, 3:51 am

Thanks for that, Any other soultion my Torrrrents keep getting removed there FUD and Binded like wtf?

- __ - Thanks.
