Thread: [How can i split this string and get the url?](#)

CPAManager - April 30, 2013, 4:54 am

Hi, I am trying to split this string and get the url part. But i just cant figure it out... This is the code:

```
Code {
  "data": {
    "url": "http://profile.ak.fbcdn.net/hprofile-ak-snc6/203526_2814507752871_15058207_s.jpg",
    "is_silhouette": false
  }
}
```

How can i do this, thank you

3lit3 - April 30, 2013, 7:01 am

Just need some clarification...This whole code is the string?

Dave85 - April 30, 2013, 8:27 am

So lets get the url:

PHP Code

```
<?php
```

```
$json =
```

```
'{"data":{"url": "http://profile.ak.fbcdn.net/hprofile-ak-snc6/203526_2814507752871_15058207_s.jpg"
,"is_silhouette": false}}';
```

```
$arr = json_decode($json);
```

```
$url = $arr[data][url];
```

json_decode will return an object:

```
$url = $arr->data->url; //this is the url
```

```
$url = $arr->data->url; //this is the url
```

PHP Code

```
<?php
```

```
$arr = json_decode($json, 1);
```

```
$url = $arr['data']['url'];
```

This returns an array ?

```
<?php
```

```
$arr = json_decode($json, 1);
```

```
$url = $arr['data']['url'];
```

This returns an array ?

Of course, because you give the \$assoc to TRUE ?

http://docs.php.net/json_decode

mixed json_decode (string \$json [, bool \$assoc = false ..

By default it's false.

So lets get the url:

PHP Code

```
<?php
```

```
$json =
```

```
'{"data":{"url": "http://profile.ak.fbcdn.net/hprofile-ak-snc6/203526_2814507752871_15058207_s.jpg"
,"is_silhouette": false}}';
```

```
$arr = json_decode($json);
```

```
$url = $arr[data][url];
```

```
echo $url; // http://profile.ak.fbcdn.net/hprofile-ak-snc6/203526_2814507752871_15058207_s.jpg
```

You forgot the quotes around "data" and "url", that will throw an error in strict mode and shit will hit the fan if he ever actually uses constants with those names.

PHP Code

```
<?php
```

```
$arr = json_decode($json);
```

```
$url = $arr['data']['url'];
```
