Thread: [\[FUD source\]Source code of keylogger.\[FUD source\]](#)

Wh?tey - May 5, 2013, 11:43 am

I'll be selling source code of custom-coded keylogger in py. Syntax is clear, self-explainable and pretty neat, under 200 lines of code only! He is plain FUD, it means you can take 100s of measures more to bring it back to FUD after and if it becomes non-FUD sometimes. It is non-aggressive program, without any melting and similar things.

Main features:Independent of net framework

Email reports

Adaptable time of reports

Screenshoot reports

Lightweight

Startup

I have done testings in Win XP environment, works like a charm, basic testing made on windows 7, looked fine. It should be working properly both on Windows 7/Windows 8, there is no reason to be different. Code is easy to customize and ideal for more implementations, if you are innovative :)

I am selling this source code to MAXIMUM OF 2 PEOPLE. As it is fair that this source keeps FUD a while. :) I won't be using it, so some lucky guys of yours will have 2 (I believe you will be innovative:)) different modifications of this code.

Paying will be done by PayPal, and for more info, you are free to post here or PM me :)
Good luck with shopping in or out of this thread!

Does it use GetAsyncKeyState, or does it use a SetWindowsHookEx call?

pOiSoNeR - May 8, 2013, 12:42 pm

Want to trade with for this account?

And you expect this to be FUD? lol

I can only imagine the nightmare of changing the hooks every few days and having to re spread once it gets detected if its not already.
