Thread: [\[.NET\] Port Checker - Using CYSM \[Source Download\]](#)

Troxin - April 1, 2010, 11:23 pm

Well most of you probably came to this thread wondering what CYSM was, it is just CanYouSeeMe. So you can leave now.

Let me clear some things up real quick before someone start to freak out just like they do on all my threads. If it doesn't benefit you, don't post. I do not care how you already know how to do this. I did not leach this from anyone. I did use some code that someone posted on one of my other threads, it really helped because I never got to one that didn't have an ID. So thanks to duckroll.

Source(With DOTNETBAR) - <http://www.mediafire.com/?ziyityoiyjo>

Source(Without DOTNETBAR) - <http://www.mediafire.com/?z2nmvtymljn>

If there's a problem, I apologize now. I am just trying to give code to others who actually appreciate these.

Oxycodone - April 1, 2010, 11:45 pm

Gonna test it. Looks good though, thanks for releasign it,

Troxin - April 1, 2010, 11:46 pm

Tell me if it works for you.

I made in like a half an hour from being bored.
Just post errors/suggestions if you have any. :P

BNBDN - April 1, 2010, 11:49 pm

awesome dude, good job...

PS -- im bored as hell too, i just started f***ing with one guy on my RAT (so funny dude).

Troxin - April 1, 2010, 11:58 pm

Yeah dude, I always want to fuck with my victims, but I don't want to lose :(.

Then when I lose a victim, I am pissed at myself for not fucking with them.

Oxycodone - April 1, 2010, 11:58 pm

Can't get it to work. it keeps stopping.

I tried opening source, and i dont have DevComponets. Can you make one without Devcomponets just regular vb.net toolbox xD

Troxin - April 2, 2010, 12:00 am

Oh yeah I can do haha, sorry for that.

You could also just copy and paste code :P

brb

This should work :P

Oxycodone - April 2, 2010, 12:12 am

Thanks ill test and review now :)

Review:

Doesn't seem to work, every port I try:

37

-IRL: Closed

-In program: closed

87

-IRL: Open (Rat cnnection)

-In program: closed

I think you may want to review the code.

BUT

This is a great source, it can be used more then just checking ports and all. you can easily mod it and make it for other programs and anti-leaks.

Or better yet you can add his to your rat project and fix the code for your rat to make sure the RC connection port is open.

I checked on site and it also says port is closed.

So it isnt your code. its the site.

Good job +rep you deserve it!

Thanks a lot mate!

CanYouSeeMe doesn't work a majority of the time.

:D ?

Oxycodone - April 2, 2010, 1:11 am

Well good job anyways, the source provides info on:

- Sending data to the site (sending port #)
- Retriving data from the site (reciving IP + if port is open or closed)
- Proof if the port is open or closed (Searching document text)

and can help alot :)

I do that sometimes, :P

Gino90 - April 2, 2010, 2:45 pm

looks awesome I'll give it a try!
thanks for sharing buddy!

Your welcome ?

:P

WinA - April 19, 2011, 11:20 pm

Sorry for digging up old post
but could we do something like this for another ip>?

JohnnyChrist - April 19, 2011, 11:23 pm

(Apr 19, 2011 11:20 PM)Transaction Wrote: [\[CITE\]](#) Sorry for digging up old post

Yes, I made one a while ago. Use the Socket class and send something to each port. If it returns successfully, the port is open. If not, its closed. I'll see if I can dig up the code.

WinA - April 19, 2011, 11:26 pm

thanks

but if we use a timer can it check ports eash time?
so like when a port is opened it will say online? without use pressing every second?
