Thread: [http flood ported to C++ bot source](#)

Marco712 - May 5, 2013, 3:47 pm

I need help or someone to code HTTP GET flood onto this IRC C++ bot source code. I will need GetTickCount so I can specify the duration of the flood as well. Please contact me if you can help. It would be appreciated.

Thanks

You have the source and you need it ported over to C++? What's the current language it is in?

I have the source where I would like the HTTP coded into. It's in C++. I don't have the HTTP flood code. Do you need me to try and look for one that's in C++ or can you make it yourself? I'm also using C++ 6.0

What kind of flood do you want? I know through the HTTP protocol but there are a lot of HTTP floods that could be implemented.

I would like HTTP GET flood for now.

Try looking at Kaitens HTTP flood.

Marco712 - May 5, 2013, 8:41 pm

I'm trying to have it ported onto this source. Can anyone help?

Shihanus - May 6, 2013, 6:28 am

A get request isn't difficult, but dealong with sessions and logging in might be.

Vector Dynamics - May 6, 2013, 7:55 am

I can do it,
hit me up with the source and stuff and I'll sort it out for you.
