Thread: [HTML ComboBox Generator\[Tool\]](#)

SIM-1456245 - May 11, 2013, 5:30 pm

I made a pretty (stupid for some people, but whatever) useless tool. I made this because I needed to put something like 30 elements in a ComboBox for a HTML WebApp, so I said , lets make an application for this.It takes a list of elements and it converts it to HTML code, more specifically to select(ComboBox) element. It has many features. It doesn't use any theme, just the regular Microsoft Framework v4.0.

Features:

Add and remove items to the list manually

Load a file in the list(line by line)

Add HTML tags(html, head, body)

Add an ID to the select(ComboBox) element

Preview the ComboBox

Copy the HTML code to the clipboard

Screenshot:

Operation:

Download:

VirusScan[VT](0/46):

I loled.

I'm going to pmub this for some people just for your sake - I pity you.

Can you please explain this sentence, I cant understand it.
What does pmub mean, and why is this silly/ridiculous. I just needed a tool, I developed it and I posted it here. Nothing really lolly there, true ?

I can't spell b- um -p because the threads will automatically filter it.

Thus, more people will be able to see your thread - 14 downloads and no posts made me feel sorry for you.
