Thread: [My ISP is blocking HF's CDN !?](#)

**xitoxic** - May 12, 2013, 12:08 pm

From 5-6 days , I am not able to browse HF via my Laptop over Wifi ( just keeps on loading or loads with a white background and no images) , It works well on my iphone and whenever i make a portable hotspot with it on my laptop.

I tried contacting a staff member , he said that My ISP is blocking the HF cdn server, can anyone help me with this issue? :(

**Hexicidal** - May 12, 2013, 12:11 pm

Have you cleared your browser cache?

**xitoxic** - May 12, 2013, 12:14 pm

yes, I have cleared the cache many times, used a different browser and flushed the DNS too, still no solution.

**iElement** - May 12, 2013, 12:16 pm

I know it may sound redundant but have you tried resetting your router? Turn it off and leave it off for 5 minutes then turn back on.

**Hexicidal** - May 12, 2013, 12:16 pm

When your phone is on your home's wifi, HF loads, correct?

**ifconfig** - May 12, 2013, 12:18 pm

I'm in Canada, and I'm firewalled on my other network. It seems the sites beenhaving a bit of trouble lately.

No Its not loading on the WIFI on phone also.

and i have reset the router several times too.

Wondering what ISP you are using?

I would contact them if you can't get it resolved.

I would contact them if you can't get it resolved.

Its called "National Internet Backbone"

figured it out via whatsmyip.com

**Diamond ?** - May 12, 2013, 12:35 pm

I was having the same issues the other day.

It may not be on your end.

**Zumoto** - May 12, 2013, 3:33 pm

Maybe try using a different web browser? See if that resolves the problem?

**iHaX™** - May 12, 2013, 3:35 pm

Have you checked your hosts file to make sure something you downloaded didn't block your PC from accessing it?

C:\Windows\System32\drivers\etc\hosts

**Hexicidal** - May 13, 2013, 8:07 pm

Any solution yet? Has it resolved?

**xitoxic** - May 13, 2013, 9:15 pm

Nope, still using it with my phone.

Its a problem on my end , so you may close the thread if you like.

Thanks
