Thread: [People are getting clever....](#)

Toxic Asshole - April 3, 2010, 1:14 am

Yeah well its almost hard to get people these days on the following

Code Omegle
Java Applet Sites
Freinds on
- Msn
- Yahoo messenger
- Aim
- Google
- Etc...

Idk in my opinion people are getting more and more clever day by day only people i seem that i can get to rat are 12-15 year olds...

post ur thoughts etc..

SIM-209986 - April 3, 2010, 1:18 am

It still Works if you Spread with torrents... I got 50 victims in 20 Mins

Toxic Asshole - April 3, 2010, 1:19 am

yeah yeah stupid ass people will still fall for it I am talking about... the following i listed.

SIM-209986 - April 3, 2010, 1:25 am

Why do u Call me stupid Ass? Yes People are Getting clever and clever and what should we haVe to do? We cant do anything we just have to learn some Social Engineering and get them.

Fallenour - April 3, 2010, 1:26 am

Or develop more powerful tools so we can eliminate needing them 8)

Toxic Asshole - April 3, 2010, 1:43 am

been backdooring any more tools on HF recently? LOL i caught you backdooring cybergate haha noob

919nc - April 3, 2010, 3:09 am

well i use 3 layer protection 1 your sig virus scanner then behavior firewall then a virtual box...

Toxic Asshole - April 3, 2010, 12:54 pm

LOL i caught you backdooring cybergate haha noob

Omg here we go again now V~i~r~u~s is going to go flaming on your a55

averageuser - April 3, 2010, 1:10 pm

1. Learn some serious social engineering skills.
2. Use them to get people with a lot of shit that can be resold to download your server.
3. Take all their shit, and resell it.
4. ???
5. PROFIT!!!

I personally choose quality over quality for RATs. I don't need a ton of shitty computer users on my client, I would rather have a smaller amount of users that can make me some cash. Or at least get me something out of it. Torrents and YouTube man. That is the best way to spread in my opinion. Or MSN auto-spread. Ton's of people blatantly click your drive-by.

Toxic Asshole - April 3, 2010, 1:31 pm

yeah true :P looks like you got it going on.. ?

darc - April 3, 2010, 1:31 pm

Dude just bind shit to every file you send to your msn and other sites ^^ (not hf tho) and youll get shit loads of victims :D

Toxic Asshole - April 3, 2010, 1:32 pm

rofl darc ur such a nub ...

cybr - April 3, 2010, 1:33 pm

Yeah, torrents are easy, but when I spread with torrents, the people I infect end up being boring. They download torrents 24/7, literally.

Yeah, people are either getting smarter, or just too lazy to click links.

jonas - April 3, 2010, 1:33 pm

I personally choose quality over quantity for RATs. I don't need a ton of shitty computer users on my client, I would rather have a smaller amount of users that can make me some cash. Or at least get me something out of it. Torrents and YouTube man. That is the best way to spread in my opinion. Or MSN auto-spread. Ton's of people blatantly click your drive-by.

What MSN auto spreaders? I've tried a few (both free and paid for) and none of them are any good. Only way I found to spread is manually.

Yepp, torrent's are good as fuck.[/QUOTE]

And this, tried torrents but only get about 5 hits in a week or so! After uploading to a load of sites it takes too long for the return.

Only really good way so far is youtube, where I got about 20 videos and around 5-10 downloads a day, with little effort after the vids are set up.

The only other way I got any decent ones is sending files from ratted peoples emails, but not that many!

PinkyPinky - April 3, 2010, 3:13 pm

post ur thoughts etc..

1. They got already rated by someone ? (infected)
2. They know that .exe files are virus 90% ? (my bad they think that every .exe file is virus) all they wanna see is pictures/videos/mp3.

When i send to a friend some setup via msn it was .exe he told me that i tried to infect him, so there you go...

It was no virus.

kitkin15 - April 3, 2010, 4:22 pm

id just send it to people with it being binded to some usefull batch or something =)

bind it to a song, video, then just put it on a site (youtube takes to long for me to upload....so im screwed there)

JAM - April 3, 2010, 4:24 pm

As they improve so do we i hope...

Toxic Asshole - April 3, 2010, 4:26 pm

well put very nicely well put :P

scared - April 3, 2010, 6:51 pm

bind popular software apps, post on all warez blogs and top torrent,trackers, you should have at least 50 of the most popular apps uploaded on the pirate bay or where ever. when getting your files, make sure they are from scene trackers in order not be possibly binding your server to an already infected file, it can happen ,lol. always bind to the installer .exe, and not the keygen or patch, sometimes they are already crypted by the crackers and they can crash or not work proper after binding,

if your interested in getting into ftps, bind your server to a cuteFTP installer, if you want pervy males

for vics, bind with popular Webcam recorders, want credit card and scammers with cash making schemes then bind with apps like mailerKing, coffee cup,stuff for building web pages for phishing, mass mailers etc,

social engineering ftw !

Bad Blood - April 3, 2010, 7:12 pm

What torrent sites do you use? I'm banned from alot of them now so I need to use proxies. Sites like mininova?

scared - April 3, 2010, 7:16 pm

i used pirate bay, demonoid,h33t.com, banned from all of them also, it only takes 1 report,lol

Sh3llc0d3 - April 3, 2010, 7:40 pm

This thread started off with the 'victims' wising up.... If you the person trying to gain access were on top of your game you wouldn't have anything to worry about. I think with alot of people recently spreading has become a case of if you chuck enough grenades onto a battlefield you'll end up eventually coming up with a good hit. Aim for specific targets, it not only increases the amount of time and efforts you can devote to the target but minimalises your chances of being caught. As you don't end up with 100's or 1000's of people with your server and IP in their torrent client. Unless you re-route it with a VPN or proxy.

People need to chillax, learn some SE, and perfect the skills on specific people, it'll teach you alot more in my opinion anyway.

(Apr 3, 2010 07:16 PM)scared Wrote: [\[CITE\]](#) i used pirate bay, demonoid,h33t.com, banned from all of them also, it only takes 1 report,lol

Your going after bigger fish. TPB H33t and Demonoid ban instantly near enough. Don't both using that unless your on someone elses network or u rly have some shit hot FUD skills. :P

Try other torrent sites mentioned in spreading tuts >search bar

Just my thoughts anyway lol ?

Toxic Asshole - April 3, 2010, 8:28 pm

yeah stuff like that its easy to get use to tho

Momiji - April 7, 2010, 8:53 pm

You can also change .exe to .com

Diamond3x - April 8, 2010, 12:21 am

I got banned from Piratebay,kickass,sumo.torrentreactor. I got 50 victims in 3-4 days.The best way to spread is torrents but you get banned on these websites.Can anybody make a list of websites that dont ban people.?

Toxic Asshole - April 8, 2010, 1:44 pm

(Apr 7, 2010 08:53 PM)Lunagron Wrote: [\[CITE\]](#) You can also change .exe to .com
you mean java drive by....

nto the actual extension lol

Icy Wind - April 8, 2010, 2:25 pm

Haven't tried torrents but it seems like i should. Right now i only

spreaded via youtube but getting close to none new connections.

Also, lol

I personally choose quality over quality for RATs.
