Thread: [What is the best C/C++ compiler for Linux?](#)

Weather Man - April 3, 2010, 2:44 am

Can someone tell me a good C/C++ Compiler for Linux, I use Ubuntu, I would prefer the Compiler to have intellisense.

Thanks,
Moterrac.

Xaniar - April 3, 2010, 3:25 am

Search for Code Blocks. that's very reliable ide i've used on linux.

g4143 - April 3, 2010, 3:58 am

I think you mean IDE. Try BlueFish, Code::Blocks

Weather Man - April 3, 2010, 9:42 am

Thanks, I'm using Code::Blocks :).

Nobody uses BlueFish...I think its pretty cool for a Graphical IDE.

I have had nothing but problems with C::B. Nothing seems to compile correctly and I always have problems with it not finding the compiler. Dev-C++(or anything) is better IMO. vim + gcc is good too, I don't write GUI apps though

Dev-C++ is an antique and shouldn't be used.

@OP netbeans and eclipse are worth looking at. also gedit with plugins can be very nice.

r00t_ninja - April 3, 2010, 1:10 pm

IMO: gcc + geany = win.

kOe - April 3, 2010, 3:33 pm

gcc / g++ ... and kate (it has some cool features) or just gedit :D

Psycho - April 3, 2010, 5:00 pm

Well, obviously gcc/g++.

I've changed my opinion on the Dev-C++ slightly due to what lamerlord said (drolremal[cl]). While I still think it's a hideous IDE, the only thing that needs updating is the mingw compiler, which you can just do yourself...and should know how to anyway if you're using it.

I'm liking it a lot...although I don't fully understand how its intellisense-like thing works. Sometimes it pops up showing something, other times not. lol

I'll take a look at it.

©@1cu1@te - April 3, 2010, 5:02 pm

Bluefish, gcc/g++, geany

Hero - April 4, 2010, 6:35 am

Use Code:Blocks with G++

bblokar - April 4, 2010, 7:58 am

You can try tcc. Its lightweight and simple.

Vi-Maker - April 4, 2010, 6:42 pm

Code::Blocks or G++/GCC!

Weather Man - April 4, 2010, 11:39 pm

Thanks for all these responses, it's really helped me. /thread.
