Thread: [\[PICS\] How to set up IStealer 6.0](#)

FrenchcoreRadio - April 3, 2010, 3:54 am

Hello all, this is my first tutorial, and this tutorial is about IStealer 6.0 and how to set it up.

What you'll need:IStealer 6.0 - [download](#)

free hosting - [register here](#)

email - [hotmail](#)

Step 1:

Download iStealer 6.0

Open the rar file, extract it to a place you want.

Spoiler [\(Click to View\)](#)http://img197.imageshack.us/img197/8291/pic1an.png[/img]

Step 2:

[Create a free account on justfree](#)

Spoiler [\(Click to View\)](#)http://img203.imageshack.us/img203/6301/pic2j.png[/img]

Step 3:

Confirm your registration.

Spoiler [\(Click to View\)](#)http://img191.imageshack.us/img191/1889/pic3v.png[/img]

Step 4:

Log in, and go to [here](#)

Step 5:

[Click on Create/delete MySQL database](#)

Spoiler [\(Click to View\)](#)http://img693.imageshack.us/img693/9477/pic4c.png[/img]

Step 6:

Create a database.

Spoiler [\(Click to View\)](#)http://img30.imageshack.us/img30/3646/pic5x.png[/img]

Step 7:

Create a user.

Spoiler [\(Click to View\)](#)http://img191.imageshack.us/img191/4853/pic6k.png[/img]

Step 8:

Assign Privileges.

Spoiler [\(Click to View\)](#)http://img33.imageshack.us/img33/1865/pic7u.png[/img]

Step 9:

[Go to your File manager.](#)

Step 10:

Go back to your istealer folder and open the folder "PHP Logger".

Open index.php

Step 11:

This is my information, but if you made yours exactly the same, you could follow this (with exactly the same, i mean the same database name "database" and the same username "users")

Spoiler ([Click to View](#))

Save it with the same name!

Step 12:

Upload index.php and style.css to your site.

Spoiler ([Click to View](#))

Step 13:

Now you can go to your own site: <http://username.justfree.com/index.php>

Put in username your Justfree account username. not the database username. (so the username you use to log in at www.justfree.com)

You should see something like this:

Spoiler ([Click to View](#))[Click here for picture.](#)

Log in with your details you entered in step 11

Step 14:

Go back to your folder (on your pc, not on internet) and now open up iStealer
enter your url in the url text box. and if you want it to bind, bind it. and if you want to change the icon, change the icon.

If you want to melt it or something different then usual, click Options and tick or untick the things you want or not.

Spoiler ([Click to View](#))[click here for picture](#)

After you have done the right settings you want, click build. and save it to somewhere you like to.

Step 15: ALMOST DONE!!

Open up the file you just build. (you can safely open it, but it will show all your passwords in the justfree site you have. but it has no further damage on your pc if you open it!)

if you ticked the Melt option, it would dissappear. (you have to make the file again so you can spread it)

Step 16:

Go to your Justfree site (<http://username.justfree.com/index.php>) and log in.

You should see your password list right now!!!

Step 17:

You are done right now. Spread the file and gain passwords!!

If it did not work for you, check every step again, because you might've done something wrong!

Credits to:

Armanistar (For writing this tutorial)

And the original programmers. (you can check them out in the iStealer 6.0 program under "About")

Justfree for the hosting.

did i forget someone? PM me and i will put it there!

If you think i should add something to make it even a better tutorial, leave a message here.

Enjoy the tutorial, it took me 1 and a half hour to write. Please dont flame me if i did not have the perfect grammar you wished for.

If you get the Database could not be found error this will be only because of JustFree that only updates their databases once a week or something.

FrenchcoreRadio - April 5, 2010, 4:32 am

46 views, and not even 1 comment? Shame you hackforums members.. shame you!

Kuuba - April 5, 2010, 8:18 am

Very nice guide, has everything :)

OGstatus! - April 5, 2010, 11:41 am

Nice thanks for the tutorial!

Kuuba - April 5, 2010, 12:31 pm

If I bind something into it, Then people who download it can't open it... Whats the problem ?

FrenchcoreRadio - April 5, 2010, 12:39 pm

(Apr 5, 2010 12:31 PM)Rsauths Wrote: [\[CITE\]](#) If I bind something into it, Then people who download it can't open it... Whats the problem ?

Get another binder, since the binder you have possibly makes the file corrupt.

theycallmek - April 5, 2010, 3:51 pm

nvm i answered my own question :) delete?

zgherlos - April 6, 2010, 5:53 am

How to get rid of istealer v6 ?

FrenchcoreRadio - April 6, 2010, 6:10 am

(Apr 6, 2010 05:53 AM)zgherlos Wrote: [\[CITE\]](#) How to get rid of istealer v6 ?

You can't. its not installed on your pc, since its only when you open it, it just once gets all your passwords and sends them to the website. its not installed.

snowfox64 - April 6, 2010, 8:51 am

Wow Really good tut. You did a great job, thanks.

Odayleet - April 6, 2010, 9:15 am

But thanks for the tutorial ;D
Dude, maybe thats because its a virus? It is an istealer which should not be 0/24 xD

coolsparking - April 6, 2010, 11:23 am

i love you siggy mate and thanks for the tut!!!

maon92 - April 6, 2010, 11:27 am

thanks great tut!! really helpd me

_[THUNDER] - April 6, 2010, 11:47 am

nice tutorial , but i have my hacked domain ;) i put all my files on it BTW well explained steps

Gero - April 6, 2010, 1:37 pm

It says error while uploading index.php

Gangstahpy - April 7, 2010, 1:21 pm

for some reason on my index.php page it says

Can not connect to database, please check the configuration.

help pleaseE?

xTiNgUiSh - April 7, 2010, 1:23 pm

Really nice Tut. good job.

c0nd0r - h4ck3r - April 7, 2010, 2:13 pm

Nice TuToriaLs :) ...Good Job ..Bravo !

Bitwin - April 8, 2010, 12:20 pm

Thanks, though its alot of tuts out there :D

manndi - April 8, 2010, 1:04 pm

nice tutorial mate but there are many of them and many of us knows how to setup istealer,anyway

good work and thank you for your time

Royal Flush - April 8, 2010, 2:02 pm

Omg very nice tut. Love it
Thank you very much +rep

FrenchcoreRadio - April 8, 2010, 11:05 pm

I know there are alot out there, but i thought another one could not hurt:P
Since this one is very easy and understandable, people have more advantage of this one than others.

vietballs - April 10, 2010, 12:49 am

this one actually worked for finally

MazTrojan - April 10, 2010, 3:29 am

It all worked by when i try to check my logs it says "cannot connect to the database, please check the configuration". I have no idea what i did wrong...

When i try to test the URL it says logger not found as well.

nurain - April 10, 2010, 3:50 pm

I cant run istealer.exe..why?

NFLballa156 - April 10, 2010, 3:52 pm

Thank you, nice and simple :) helped lots.

FrenchcoreRadio - April 10, 2010, 6:04 pm

Are there any more questions?

Nuz - April 10, 2010, 6:08 pm

Nice, clean tutorial. I subbed thread so I can do this later when I have time.

benny boy - April 13, 2010, 11:21 pm

Great guide, thanks to this guy i can use iStealer. ;)

blue balls - April 14, 2010, 12:08 am

on what OS does the iStealer server infect?

FrenchcoreRadio - April 14, 2010, 2:09 am

(Apr 14, 2010 12:08 AM)blue balls Wrote: [\[CITE\]](#) on what OS does the iStealer server infect?
Every OS of windows i thought :)

nurain - April 14, 2010, 6:26 am

It doesn't work for me..://

EDIT:

SING error
DOMAIN error
R6028

- unable to initialize heap
R6027
- not enough space for lowio initialization
R6026
- not enough space for stdio initialization
R6025
- pure virtual function call
R6024
- not enough space for _onexit/atexit table
R6019
- unable to open console device
R6018
- unexpected heap error
R6017
- unexpected multithread lock error
R6016
- not enough space for thread data

abnormal program termination

- R6009
- not enough space for environment
R6008
- not enough space for arguments
R6002
- floating point not loaded

I found these lines almost in the end if the .exe file. Can anyone tell me why are they in the file? ://

Sorry for my bad english.

popu - April 16, 2010, 9:48 am

Very nice tut , that's great already tested .

But , now i set a java drive by on SPAM . And i ran it . And now the index.php don't want to connect me :(.

Why ? :S

But very nice tut =D

J1nx - April 16, 2010, 9:59 am

Thx for the tutorial!!

I guess iStealer is not UD at all...do you have an easy way to make it UD ?

??

coolsparking - April 17, 2010, 1:47 am

Thanks a lot and wesome bro!!!!!!

hacker1g - April 17, 2010, 3:07 am

whats up the thing that i cant register at the freesites-.-

Durial_321 - April 17, 2010, 6:28 am

nice tut and keep up the good work , thanks =]

maglc_seeKer - May 27, 2010, 8:47 am

hello !

it keeps giving me a error : "Logger not found, check the url"

any help?

KillAdinFTW - May 27, 2010, 2:34 pm

wtf?!i cant reg on spam.com -,-

Da Saint - May 27, 2010, 2:41 pm

Wow very detailed tutorial, thankz

usernm123 - May 27, 2010, 3:02 pm

i get Run-time error '6': overflow when i build the server somebody know hot to solve this error

Sk0rpi0n - July 27, 2010, 5:10 pm

For me it works perfectly, but there is nothing of the steam

xMi - July 27, 2010, 7:59 pm

damn nice! really helped me! vouch 4 this guy :]

zerocoolxtreme - July 27, 2010, 11:49 pm

?~ iSTEALER 6.3 has been detected by avast with update 27-6-2010~[color=#FF0000]

[img]http://www.[censored].net/uploads/c096725850.jpg[/img]

xMi - July 28, 2010, 5:22 am

Eyy why does it stand on my index.php page = Can not connect to database, please check the configuration.

PLZZ HELP! :]

Mintee - July 28, 2010, 9:03 am

Spam.com? you sure? something wrong happened there... :P

Crypt3r - July 28, 2010, 6:33 pm

thanks man very good tut helped me

mehim - August 2, 2010, 4:22 am

it works yay

thanks a lot i couldn't work it out

i'm wondering what do you think is better stealers of loggers??

godsp33d - August 2, 2010, 7:37 pm

people... the link was messed up- its just(removethis)space(dot)com

i registered and everything worked fine! except after about 30 mins my page redirects to dynamichosting.com - they must not be "free" anymore :/

Thereisnowinner - August 2, 2010, 11:38 pm

when i click Test URL, it says logger not found, check the url...what does it mean, i put the exact url. also, when i log into the site it says "Can not connect to database, please check the configuration."

ThE-iNFILTrATOr - August 2, 2010, 11:54 pm

J.ustfree have started blocking accounts with istealer .

(Aug 2, 2010 11:38 PM)Thereisnowinner Wrote: [\[CITE\]](#) when i click Test URL, it says logger not found, check the url...what does it mean, i put the exact url. also, when i log into the site it says "Can not connect to database, please check the configuration."

check your database configuration

check you have correctly edited index.php

sumit8510 - August 3, 2010, 12:08 am

Thanks for this nice tutorial.

Em0c0rE - August 3, 2010, 9:10 am

Is there any other hosting? because SPAM doesnt works anymore :/

Threadlocks - August 3, 2010, 10:59 am

is MySQL host meant to be 127.0.0.1 ??

godsp33d - August 3, 2010, 4:18 pm

use zymic.com its relatively the same.

mehim - August 4, 2010, 3:43 am

(Aug 2, 2010 07:37 PM)godsp33d Wrote: [\[CITE\]](#) people... the link was messed up- its just(removethis)space(dot)com

i registered and everything worked fine! except after about 30 mins my page redirects to dynamichosting.com - they must not be "free" anymore :/

yea i just sent the stealer to some one and then this website came up when i refreshed the page ?

FatPeopleLagIRL - August 5, 2010, 7:34 am

Thanks very usefull. Good Job !

iamnotHacker - August 5, 2010, 7:48 am

thx man it is very nicee.. thank u very much

nikhil1996 - August 5, 2010, 8:13 am

Thanks for this noob friendly tut :)

chrisdenkule - August 7, 2010, 4:54 am

Logger not found, check the url ! :(what ??

hemescool - September 3, 2010, 8:24 pm

wow awesome tutorial bro :)

#Daniel - September 3, 2010, 8:31 pm

WOW Its a grate tut!!!

Did you copied the tut?

Mashimaro - September 3, 2010, 9:09 pm

Wow Really good tut. You did a great job, thanks.

Grudgeee - September 3, 2010, 9:21 pm

Man I have to use Stealer more... Nice tutorial man.

ShadowForge - September 7, 2010, 9:30 am

GIVE THIS THREAD STARS cant believe such a helpful tut had 1 star i ed it up to 3 for you by giving you a 5 :3

sunman619 - September 7, 2010, 9:58 am

hey dude nice tutorial sahiye...!

djkapo - September 8, 2010, 7:40 am

jsutfree.com and spam.com dont work :@

any other site to do the registration ?

EPWND - September 8, 2010, 9:49 am

nice virus in there thanks ;)

Brigade - September 17, 2010, 3:44 pm

This is the only tutorial on iStealer that actually worked for me, thank you sir :)

noid - September 17, 2010, 10:37 pm

congrats! another fucking istealer tutorial.

h4xer - October 26, 2010, 12:29 am

really helped me thanks a lot

Z?us - October 26, 2010, 12:31 am

Well its at least descent.

Connectivity - October 26, 2010, 6:23 am

Very well done mate. Thanks very much for the share, has helped me hugely! Want any Webdesign, graphics done give me a call.

skiddyexterminator - October 26, 2010, 7:00 am

Great tutorial man, keep up the good work.

BOND007 - October 26, 2010, 7:04 am

Nice tut trying it right now, thanks!

^Hybrid - November 24, 2010, 3:16 pm

Very very good tutorial tn timer for share :)

Chris.. - January 17, 2011, 4:33 pm

Thanks

Going to try this now.

iZan - January 17, 2011, 5:32 pm

Very detailed guide. Thanks for this mate! I needed it xP

Methanifty - January 18, 2011, 2:43 am

Haven't been using iStealer for a long time, might use it again. Thanks for the guide.

- Butterfly

xJLR - February 4, 2011, 10:03 am

I always get this

Please Help =)

babloo - February 9, 2011, 10:55 pm

lol you binded your virus with the IStealer 6.0 :P

crobak1 - September 14, 2011, 11:00 am

Thanks works like a charm :")

-character limit bypass-

z3roh4x1337 - October 2, 2011, 3:22 pm

(Feb 4, 2011 11:03 AM)Ja?e Wrote: [\[CITE\]](#) I always get this

Please Help =)

Im not sure though but i think you have to disable your AV to let it execute the program

Regards
