Thread: [Does your integrated graphics not show when you get a Graphics card?](#)

Kamina - May 15, 2013, 1:38 pm

So today my Graphics card came in and I installed it and I was wondering if your integrated graphics just doesn't show up anymore on Speccy..

Here is my Speccy reading.

So should my integrated be there or no?
It's a HD 4000 integrated graphics on the CPU :P

Thanks for anyone who can help.

Most of the time, BIOS will disable the on board adapter when ever you add a card to the expansion slot. So the answer is No, your integrated graphics will not show up when you install a vga card

From my personal experience, if a dedicated graphics card is being used, it shows up as the only graphics card in Speccy.

Okay then :)

Thanks very much! ?
