Thread: [\[TuT \] Any Windows Faster and better.](#)

Policies - May 16, 2013, 2:36 am

About this Tutorial: With this tutorial it will help your computer start up faster, things will run a lot smoother prevent those lags you really hate that just come out of no where. You don't have to worry about it anymore! This guide will help you make your computer run a lot faster! If you have any questions just send me a PM I will help you though the process if you are stuck.

Step 1: Click on Start search 'Msconfig'

Step 2: Go to 'Services' click on hide all 'Microsoft Services' (you do not want to mess with that.) Turn off the things you don't use. It will ask you to restart, but this is part of the process.

Step 3: You will be see that your computer is going a lot fast. Okay so now you are going to go to your task manager. (Ctrl + Alt + Delete)

Step 4: Go to the start up disable the things you don't want to be hidden from you. (This is to make start up faster.) You also can check how fast it will boot up which is your 'BIO time'.

Step 5: Go to 'control panel' after that you go to 'Programs' in there 'turn off Windows Features'

Step 6: Reset your laptop/desktop and enjoy!

I hoped this helped, please PM me if you need any assistance! If I should add pictures please tell me I will add it on.

Nice tutorial and it works. Just make sure that you do not disable any required programs or drivers.

Decompiler - May 16, 2013, 3:28 am

This is a very old trick but definitely does the trick ^_^

Not a bad little guide here. Though an old trick, I'm sure it'll help out a lot of people! Just want to let everyone know that this will disable a lot of programs from checking for updates on boot (java, flash being two of the ones you need to keep up to date with).

So if you do, do this - Please keep in mind to check for Java and Flash updates regularly.
