Thread: [about stub and call usb spread from stub to downloader or Rat](#)

LastS0ul - May 16, 2013, 3:15 pm

Hi all

i have some Questions need help

first i need to know how to make my stub
External

second how to call or when i add usb spread to Stub then i want make checkbox.check

u know when i check that mean make server have spread if not server dont spread .

thx pls asnwer if u know .

i mean when i add usb spread code to stub

_SLQ - May 16, 2013, 3:21 pm

The majority of people usually just write the instructions into a structure at the end of the file.

Other ways to do it include replacing directly into the program's resources or simply doing a PE injection.

how ?

i want make checkbox.check on the form

to choose apply it or no.

Go learn the language - particularly file IO.

http://www.tutorialspoint.com/vb.net/vb.net_file_handling.htm

i know

i just need to know how to call function from stub to program crypter or rat and combine with the server

So you wish to learn codedom or end of file method?

Go look at file IO for EOF.

You want to build a program inside your program do you not?

LastS0ul - May 16, 2013, 4:10 pm

i dont want build program

look i have downloader and i want make downloader have usb spread with choose it i mean have checkbox to make it work when i want..

where and how add the usb spread code i hope u undrstand me.

Wait - hold on. So you're talking about sending commands over from the remote to your stub in order to make features work?

The keyword is protocol. I normally have a semaphore queue tied to a completion port which - when interrupted by any GUI controls - will cause it to fill with structures. Inside - you find the socket ID of the user selected, the protocol as a hex value, length of the payload... & check-sum. The IO thread will send these packet headers over the wire in a FIFO style.

You need to make something similar and cause the stub to read the length; receive that amount of bytes - parse the protocol and then execute whatever instruction.

[LENGTH][SID][PROTOCOL][PAYLOAD][CHECKSUM]

Use either ASCII/UNICODE representation or Network Byte Order.
