Thread: [C++ 11 compiler for Windows](#)

Crake - May 29, 2013, 4:09 pm

I seem to be SOL, any ideas? I need a free (preferably elegant) C++ compiler with C++ 11 support for Windows.

Sajuuk - May 29, 2013, 4:11 pm

CodeBlocks, NetBeans, VC++, there are many options.

You're thinking of a compiler..not IDE. The IDE has nothing to do with C++11 Support. Anyways your options are GCC, Microsoft's Compiler, Intel Compiler.

I'd stick to GCC and you can use Code::Blocks as the IDE.

notsteve - May 29, 2013, 4:18 pm

Visual Studio Express has the best IDE, code::blocks is opensource afaik but isn't quite as elegant.

read: I'm weak and like to have autocompletion in the name of productivity

Yup you just compile with -std=c++0x in the command line.
