Thread: [Setting up your mining operation \(Bitcoin Litecoin Mining Stratum Proxy\)](#)

**juancarlos** - May 31, 2013, 10:23 am

Hello,

I have spent the last weeks and months to prepare for a botnet mining operation.

In the last days, I decided to sell my knowledge to people who do the same.

What I can offer:

Setting up your VPS or Dedicated Server for the perfect mining operation.

You will be using the stratum mining proxy which is modified by me.

I used the stratum mining proxy forked by invl ([github.com/invl/stratum-mining-proxy](https://github.com/invl/stratum-mining-proxy))

That version has the 255 Peer limit removed, but does not fix the bug at 1012 Peers.

I had to modify the code and adjust server settings to remove the 1012 peer problem. It has been tested and working on slush pool, 50btc, btcguild and eligius pool.

This is not public. You will not be able to run a proxy with more than 1012 peers when you use any available proxy software.

The price for a setup on your VPS or Debian is 1.5BTC.

I only accept BTC, nothing else.

**Budweiser** - May 31, 2013, 10:32 am

1.5BTC your crazy. No one will buy this that is \$130 your asking for .

Rethink your prices

Rethink your prices

Hi,

everyone who is serious about the mining will pay 1.5. If you are not ready to pay 1.5BTC, you probably arent going to have more than 1000 peers anyway.

First setup done for Termi. Thanks for using my service!

**T3rm1** - June 5, 2013, 6:31 am

Perfect work. He understand his job :)

**juancarlos** - June 8, 2013, 2:10 am

Service still up. Providing HQ service!
