Thread: [Seeing vbulletin user passwords in plain text?](#)

Taru - May 31, 2013, 9:44 pm

I got access to a vbulletin forum's database.

How would i go about getting the actual passwords for the users?

How would i go about getting the actual passwords for the users?

You need to crack the password for the selected user which is going to be hashed.

Ok I mistook the hash method for vBulletin it is actually:

PHP Code

```
<?php
```

```
md5(md5($password).$salt);
```

PHP Code

```
<?php
```

```
md5(md5($password).$salt);
```

I honestly have no clue how I would go about cracking it.

Would you mind assisting me?

Future refrence, just keep this bookmarked:

PHP Code

```
<?php
```

```
hackforums.net/showthread.php?tid=1393830
```

Also for cracking:

PHP Code

```
<?php
```

```
https://hackforums.net/showthread.php?tid=3007635
```

Give me an example password hash, and the salt associated with it, which should be found in the database and I'll see what I can do.

Kerberos - *May 31, 2013, 10:27 pm*

Ill take a crack at it too. You can PM me the admins or high ranking members hashes/salts and ill run it thru my bruter.

that was easy :P
