Thread: [path traversal problem...](#)

cyberbitch - June 3, 2013, 2:04 am

Hi, i try to find the admin page by path traversal. But still without succes.

Url: <http://idb.idebe.hackme.certifiedsecure.com/>

Its from a security challange. Who can help me?

Or is there a tool that its very usefull with Path traversal

Greetz

if its from a security challenge then whats the point in cheating? your only cheating yourself, instead go and learn and then come back and try the challenge again in say a week, equipped with the knowledge of how to complete the task

MajorFail - June 3, 2013, 5:31 am

Target: <http://idb.idebe.hackme.certifiedsecure.com/medewerkersbrief.txt>

Vuln: <http://idb.idebe.hackme.certifiedsecure.com/index.php?c=medewerker&i=1>

Result:

<http://idb.idebe.hackme.certifiedsecure.com/index.php?c=medewerker&i=../medewerkersbrief.txt>

cyberbitch - June 3, 2013, 12:34 pm

Yeah, i know. its not good to ask help. But i tried it many times. and still without succes.

@MajorFail. The "medewerkersbrief" if has already found. I just searching for the admin page

You can use the 'image browser' to view the directory structure, like:

<http://idb-beta-v1337.idebe.hackme.certifiedsecure.com/index.php?c=browse&dir=../../..>

There you'll find the admin dir.

this is a old topic i know, since there is no other topics about this i really need help, i dont need awnsers but i really hope u guys can get me in the right direction.

i have problem with posting a picture on the frontpage because i dont have the right login (id pass) i did found few login information but not the right one, who can help me?

Greetings

Did you resolved issue with Publish an image on the frontpage?

Joeri Jungschlager - *October 3, 2019, 12:23 am*

It seems like this challenge had a minor update which resulted in the OWASP method doesn't work anymore, I assume this through the fact old topics, stating LFI works.
