Thread: [\[VB6 & VB.NET!\] Cyrum 1.3 \[Junk Code Gen Coded In VB6 \[FOR VB6 & VB.NET!\]\]](#)

LethalNET - June 3, 2013, 2:07 am

First of i know people will try to flame me, but this is mainly aimed to the beginner coder who has just started out with eof, >I WOULD NOT RECOMMEND THIS WITH CODEDOM!<

+ About +

Generate functions
Generate subs
If/Then
Strings in sub declarations
Load a form or module and add code directly [VB6 Only]
Enable XOR Encryption [Strings and string values]
Byte Code =""
GoTo
Split
Random dims
Random integers
Random / Encrypted comments
Set generate loops

Ok Thank you where is scan ? . . .

log dot zip - June 3, 2013, 12:06 pm

If you're not gonna release the source, you might aswell put it in the hacking tools section, meh.

Ace of Spades - June 3, 2013, 10:09 pm

You should make this a sub-feature of something larger, like an obfuscator, then it'd be badass, or release the source :b

Still, nice work ?

nuk - June 4, 2013, 7:07 am

Looks promising... just a question (and excuse my noobness on this, as I don't have much experience in RATS/Cryptors, etc..) but my question is: would something like this still work anymore? I was lead to believe that these types of things no longer work (for the most part) ???
Thanks for release and share homie :)
