Information: Project Vibes is designed for people who enjoy this-type of genre of music. I, for one, am quite fond of it and I thought I'd share it with those who haven't yet heard it. Mostly (on Sweet Vibes) just spin-offs of actually songs and produced independently, these various artist create this music and share it with the world. Hopefully, you'll be able to find some type that you like and soon, contribute your own to the cause. Currently, you can go from song to playing it, but we're in more of a beta stage where there are indeed kinks that we need sorted out. However you should be able to play them no problem. If you have a smartphone (e.g. iPhone) you're able to access the site and easily just play the music off your phone and enjoy no problem or questions asked.

Future plans:

Enable active sharing, rating, and maybe even comments?

Create a rating system to enable the users to pick and choose which they like best

Create a list with all authors featured on the site to be able to search via author

Create a search bar as well

Create a recommend page for the users to recommend a song

Add moderators to go through the recommendations

Just seems like a cluster-fuck of mp3's.
