Infobesity - June 4, 2013, 12:38 am

Could you explain how this could be done, what exploit, why not put a tutorial so we don't have to use your generator, we can fine our own?

File seems to be password protected, can't debug. Not doing surveys.

Here's where he got me:

Code 1.Fixed all errors

2.Workin on any windows

3.Working on any android version

4.Working on Mac or Linux

5.Working on all countries

Works on windows, android, mac, and linux. With just 1 exe!

Conclusion: Fake, just want to make survey money.

Lie.

Oh okay, yea welcome to HackForums, no one is stupid, no one likes liars. Don't say your .exe works on windows,macs,linux that's 100% a lie. Also we like proof, so a picture and video evidence is nice.

Random Sauce - June 4, 2013, 10:53 am

Lets say this program works.. Why don't you just create accounts, use the tool and sell the accounts to members? = Make money and earn trust? ?

And then sell the program for a high but fair price.

(Jun 4, 2013 12:22 PM)TheSacred Wrote: [\[CITE\]](#) And then sell the program for a high but fair price. Hackforum users won't be willing to download this program due to so many people in the past trying to infect other users.

The only way you can use this program (if it truly does work) is to create accounts - use the program - sell to make profit?

?

roger5280 - December 24, 2013, 3:53 am

no one will download it lol or they must be rilly stupid
