Thread: [PyPaste - Simple pastebin client](#)

__init__ - June 4, 2013, 12:27 pm

Hey! Today I am releasing my latest program that I have been developing today. It doesn't really do anything special, it just uploads stuff to pastebin.

Maybe tomorrow I'll expand this so that you can download existing pastes etc.

Anyway, here's a screenshot:

Here's a link to the source, feel free to do whatever you want with it!:

<https://github.com/JakeHorsfield/PyPaste>

antigrav - June 4, 2013, 1:35 pm

Here's an idea - how about implementing file reading? It's not too hard - the real challenge will be (in my opinion) having the user select the file they want to use in some way. When it comes to actually reading the file, that's a simple enough task that should only take a couple lines of code.

Just a thought.

That's a good idea, and very easy to add too! I'll do that in the morning and then update the thread.

Thanks for the suggestion ?

Hannah Montana - June 4, 2013, 10:44 pm

I might work on a python backend of pastebin. Not sure yet.

Sounds good! Let me know once you've finished so I can check out the code :)

Just a thought.

I've just added that feature now. The updated code is on Github and here's a screenshot:

Damn, that's awesome! Nice job. Question - when typing in the text box, does tab move over four spaces, or does it switch to the 'Paste' button (or does it do something besides those two)?

I could see that being a little annoying for a user, but that's really the only thing I can think of that you might wanna look at or add.

Great job!

Great job!

Just tested it now and it inserts spaces, it doesn't switch to the button :)

Very nice job, i've seen some of your work and i have to say that i'm quite impressed.

MountainLion - June 8, 2013, 9:03 am

Amazing :)

Your not the real Richard Stallman are you? ;)

WreckfullTM - June 8, 2013, 9:05 am

Looks cool and awesome man I am just looking into the source code ?

Hannah Montana - June 8, 2013, 1:00 pm

If he was real RMS it wouldn't have a GUI and he wouldn't be using proprietary programs like Skype.

__init__ - June 9, 2013, 12:59 am

Thanks for all the replies people :)

And no I'm not the real Richard Stallman. Unfortunately I don't have a 2 foot beard :(

Bljek - June 9, 2013, 10:45 am

This is a very clean program and useful as well.

MadHunteR - June 12, 2013, 9:40 am

Good has been application. Thank you for share brother.

BlueMelon - June 12, 2013, 4:47 pm

Hm, from your github page I can see your sublime text 2 is not registered... check your PMs ;)

feudin - June 13, 2013, 5:08 am

Looks fresh (The GUI), shame i cant say the same about the *buntu dist :p

Regards brother

Regards brother

Yeah I usually use Arch but when Ubuntu 13.04 came out I gave it a try and never changed back :/

I've removed most Ubuntu crapware though :P

? Richard Stallman wouldn't use a forum like this because it is privative ??

DpzFAsq4UEK8 - June 16, 2013, 5:43 am

Is this for python2 or for python3?

__init__ - June 16, 2013, 11:55 am

(Jun 16, 2013 05:43 AM)korn36 Wrote: [\[CITE\]](#) Is this for python2 or for python3?

I believe this only works in python 3 for now

Feminist - June 16, 2013, 1:35 pm

Good job. Do you use any kind of GUI builder for python? (If so what) Or did you manually map everything yourself?

Emylbus - June 16, 2013, 2:28 pm

Thank god you're not him. I went to one of his talks, once he began the question answer section, he sat down on a chair, pulled out a bottle of lotion, took off his shoes and socks, then started rubbing his feet... on stage... while we asked him questions.

Regardless, nice release!

BlueMelon - June 16, 2013, 7:02 pm

Yes hes using the QT UI designer.

<http://qt-project.org/>

(Or building it from scratch, but there really isnt a point in doing that anymore)

jazzycool - June 16, 2013, 10:01 pm

That is an awesome work there, I really liked it. Nice work.

Lucky83 - July 19, 2018, 1:08 am

hello.

link is down

can you pls reup??
