y try it y - June 5, 2013, 12:24 pm

I heard alot aswell about these crypters, good thing i dont buy em.

Bat™ - June 5, 2013, 12:26 pm

Heads up guys 'N3o' is a real scammer!

dylanups - June 5, 2013, 1:26 pm

Any crypter that gets semi-big on hackforums just turns to shit cause the owners get lazy/can't refud.

N3wb Gamer - June 5, 2013, 1:27 pm

Actually when I had this crypter there are different encryption methods so that it can stay FUD. I used one that started with a R and it was FUD for awhile

debug - June 5, 2013, 8:33 pm

Sish!~ - June 6, 2013, 1:45 pm

Hmm well this seems quite interesting that review looks legit ?

N3wb Gamer - June 7, 2013, 8:14 am

(Jun 5, 2013 08:33 PM)debug Wrote: [\[CITE\]](#) Encryption method has little to no difference on keeping the output FUD. Actually yes it does. When I used AES it was ALWAYS unfud

DeadAccount123 - June 7, 2013, 12:40 pm

i have 2012 crypter and it works great.

DarkSec - June 7, 2013, 12:45 pm

I want this, looks better then all the rest tbh

The Guardian warrior - June 12, 2013, 5:20 am

Bumping this up for the sake of people to be aware.

Myrion - June 12, 2013, 3:32 pm

(Jun 7, 2013 08:14 AM)N3wb Hacker Wrote: [\[CITE\]](#) Actually yes it does. When I used AES it was ALWAYS unfud

You're wrong. Encrypting the encoded string will rarely change the output detection rate.

Ad?m - June 13, 2013, 7:58 am

Haven't read this, But will later.

OT - If you pm me or evo. We could of sorted this out for you. No need to make a thread about it.

skatobi - June 13, 2013, 8:19 am

(Jun 12, 2013 05:20 AM)@@ The Guardian @@ Wrote: [\[CITE\]](#) Bumping this up for the sake of people to be aware.Thanks for your post!!!

I was talking with him about coding me a private crypter source.(a lot money.)

Thanks for your help!

dexec - June 13, 2013, 9:08 am

can anybody tell me auto-spreads work or no ? i want to buy thise cryptor only for auto-spreads

Mr. Sultan - June 13, 2013, 10:24 am

Where is n3onight??? I can't find him on HF anymore.

2012 Crypter Sucks - June 13, 2013, 6:34 pm

(Jun 13, 2013 09:08 AM)dexec Wrote: [\[CITE\]](#) can anybody tell me auto-spreads work or no ? i want to buy thise cryptor only for auto-spreads

No it doesn't work, that was the main reason I chose it over other crypters. Don't be fooled. This is clearly false advertising on their part because more than 75% of their features DO NOT EVEN WORK! If you use any of the so called "encryptions" it will only make your output file MORE detected. I've gone through them ALL and seen the results first hand.

THIS CRYPTER WILL NOT FUD A NETWIRE SERVER COMPLETELY, so if you're planning on using netwire, choose another crypter! I sincerely think that this crypter does absolutely nothing for runtime fudging.

Also there was an update TODAY for the crypter and its not even FUD for any of the three stubs! It corrupts the server 3 out of 5 times and you have to keep hitting crypt to get a until it actually makes a decent file without spouting errors. This crypter is a joke.

Let it be known that this update that was released today took 3-4 days to come out after the last update became FUD. Whenever EVO says that "there will be an update today" in his thread, it takes another 2 days for that to even happen. The owners tell people that updates will come 1 day after a stub is detected. This is a flat out lie, and they should not ever be believed.

FYI I'm the guy who is quoted in the original post. Netwire + reverse proxy + too many hacked gmails = win

Thank you @@ The Guardian @@ for spreading awareness about these scammers and their shitty crypter. Their thread should be closed for false advertising and they should be banned for scamming people.

Here's some proof pics that I actually have the crypter and its detected even though there was an update today. Crypt was done on a bare DarkComet server since this crypter can never FUD netwire. It's even worse when crypting blackshades.

Stub1 = 7/35

Stub2= 5/35

Stub3= 6/35

Darkwin - June 13, 2013, 6:46 pm

I would never use such product, judging from the screen caps above me it looks like shit. At the user above me, Maybe you should've chosen much more carefully... If there's anything i learned is when it comes to crypters never buy them from HF.

Iron m@n - June 13, 2013, 8:29 pm

I am using this crypter since 1 month. and it works great.

iRtehLeet™ - June 13, 2013, 9:24 pm

Oh god the GUI should give it away that a retarded 13 year old coded it..

Iron m@n Wrote: [\[CITE\]](#) I am using this crypter since 1 month. and it works great.
The amount of obviousness that someone asked you to post this...

jaisyxxx - June 14, 2013, 6:26 am

shit crypter, and something else i learned in my life, dont call me racist, cuz its a fact: never trust an indian....

deezjee19 - June 15, 2013, 3:03 pm

I am having issues with updates too. Giving it one last try to get it solved, or I will share some details on what happened. Future customers should be aware.

JuicyProgramming - June 16, 2013, 8:54 am

I got lifetime licence. NEVER got any problems with FUD. Longer FUD time then Infinity, Chronic, Cube. Great crypter. My opinion. I love it. Crypted this 4/5 days ago and its still fud:

It was a IPKiller server binded to a Blackshades rat :)

RawringKevin - June 16, 2013, 10:34 am

I reading how people got their lifetime subscription canceled and then people saying they bought lifetime. Halp.

2012 Crypter Sucks - June 16, 2013, 11:02 am

Go back to riding their dick and stop promoting lies to the public about this terrible crypter.

The lowest detection rate I could get was 5/37 using stub 3 with insidious miner. The rats all gave more than 7/37 detections. And when it said AVG free was okay, I uploaded a server to a slave and watched AVG pop up detecting it while on remote desktop.

Good job on showing a date in the pic also. It hasn't been FUD for 2.5 days now. And who knows what the rest of your scan says because you only have the top portion showing. Looking at their track record for updates, we'll probably see an update in 5 more days.

Just this morning I've extensively tested this crypter and tried fudding:

Insidious Miner
Blackshades
Darkcomet

Netwire
Cryptocurrency wallet stealer

None were FUD using many different icons and assemblies that I've used in the past with this crypter or currently with other crypters that work great it making the servers FUD. I tested all 3 stubs for each crypt with many different combinations of settings and still no luck. I've tested and seen that the runPE settings have no effect what so ever.

Also when you try and crypt a file, you usually see the stupid dialog box saying "you got a problem buddy" even though there shouldn't be any errors. After pressing crypt again and again it will finally successfully crypt the file even though no settings were changed since it gave the error. Another thing is after you crypt your file, on the "install" tab, the "Process Persistent" check box becomes unchecked every time, and you aren't even sure if the setting is being used for your crypt.

In the official thread, you can also see that the support for this crypter is getting less and less support every week. My prediction is that it won't be long until the crypter is not supported at all and they run with everyone's money. If I could post on the official thread with this account, believe me I'd post all my results there to show people just how bad this crypter is.

N3onight said about 1-2 weeks ago that USG was coming, but we'll probably never see it. If he does add it on, he'll probably rename the crypter and fuck over the old customers like he did last time.

•**ANONYMOUS**™ - June 17, 2013, 3:53 am

AFAIK, the only good crypter on HF right now is Dark EyE...

Also, omni should ban all .net-based crypters!

willit - June 19, 2013, 1:46 am

RIGHT !

I have the crypter 5 days, and not ONE day was it FUD !

Reptilian - June 19, 2013, 3:46 am

I also reported him before you did, here is the link to my report (He took a vacation break because of me):

<https://hackforums.net/showthread.php?tid=3524530>

Bull™ - June 19, 2013, 4:32 am

I have read lot and found all .net Crypter is suck and its selling on hf Only. let me correct if i was wrong .

Paradoxmoney - June 19, 2013, 4:34 am

i have 2012 crypter and it works great for me

Ad?m - June 19, 2013, 4:37 am

Could you guys not include evo or me in this? Evo is just the re-sell of it. N3o is the one meant to be doing updates for it to be fud.

willit - June 20, 2013, 3:08 am

<https://hackforums.net/showthread.php?tid=3563946>

kalandershihabrock - June 20, 2013, 7:04 am

most of the crypters here at hf shitty when they become a hit.
not sure if it's that the owner is lazy or if he can't maintain it anymore.
