Can I ask how you managed to get the latest dash on a jtag?

Ask Rodent Modz from TheTechGame.
He's the person I purchased it from.

I think he sold you a RGH. Ever pop the case open and look inside?

No, I've never opened it myself.
Not sure if it is a RGH, or a JTAG.

Im fairly sure its a RGH. Im pretty sure its impossible to get that recent of a dash on a Jtag. Either way it can run unsigned code and is on the latest dash, good luck with the sales!

Alright, thanks for the kind words.
I appreciate you clearing that up. :)

This is a JTAG as Xenons aren't reliable for RGH.
It's on the latest dash because you can use an "Modified" version of the new dash on a JTAG/RGH.

People complaining about the price don't realize that most JTAG'd Xboxes are sold with the bare minimum accessories, and usually no HDD at all. I think it's a fair price. Good luck with sales OP.

Percocet - June 27, 2013, 8:00 am

I would definitely buy this if I had that kind of money on PP. Unfortunately, I don't. :(

How much are you willing to pay for them?

Fredo Santana - June 27, 2013, 1:11 pm

The prices you have listed next to them if that is okay.

Arkansas - June 27, 2013, 3:27 pm

Eh, your XENON is a little out of date buddy. The console itself should be around 110\$ max.

Sorry it's just the truth.

Try reading the topic.

This includes the cables, a controller, and several storage units.

The 110\$ price is for a console, and no accessories, or storage units.
