Thread: [\[100% FUD\] ProCrypter - StubGen \[100% FUD\]](#)

DZEAGLE - April 6, 2010, 12:56 pm

Hello Guys !

First, There are 3 main sub-projects for this project, resulting in 2 binaries.

TUTORIAL :

1. Compile the stub.
2. Open up stubgen project and replace the existing resource with your compiled stub
3. Compile stubgen
4. Compile GUI
5. Now you should have 2 binaries, one for gui and one for stubgen.

Additionally:

If you want to change the embedded XORed strings, just use the included XOR-project and generate new strings,
and remeber to use correct password for the encryption.
