Thread: [\[FREE\]GeoGen Simple Keylogger v.3 - FF 3.5+ Stealer inside - No Drops \[FUD\]](#)

Albertino - April 7, 2010, 5:00 am

[img]http://img193.imageshack.us/img193/7356/askt.jpg[/img]

Hi guys,

My closest friend GeoGen just created simple keylogger from my sources for your use.

Features:

Send to Gmail with a backup FTP upload (that mean you can pick FTP as backup upload source, so if Gmail fails to send the logs it will be sent to FTP).

Smart logs (Smart backspace, Shift, Caps Lock, NumLock and etc...)

Improved data sending from v.1

FireFox 3.5+ passwords stealer

(no drops at all for stealer and keylogger)

The program is written in VB.NET, that mean the client must have Net Framework 2.0 installed.

Enjoy!!!!

Albertino,

I'm glad you switched over to SC. It's a decent way to make a small amount of money for the free programs you share. I really like the gui btw.

It not me, its my close friend, who starting to learn languages and he writing FUD programs from my old sources I gave him.

I just share it form him, because he don't have account here.

About the quality of programs nothing to say, because its my old sources :)

After you've loaded it and got what you were looking for, how do you remove it? Does it reside in memory and a reboot clears it?
