Thread: [RAT problems with xp](#)

Arkadiy - April 7, 2010, 6:30 am

Hi all guys...i have a problem with infecting users with xp...

So,lets start from the beggining,i have created one server with cybergate, i tested on myself,it worked...i tested on my friends pc,it worked perfectly...

Then i crypted my server,i tested it on me it worked,so its crypted,i tested on my friend,but it didnt worked...

The main problem is that my friend has xp,i have tested to run crypted server on vista and it worked,so the problem is with xp,after that my friend installed .NET framework, but it didnt worked again..

Where could be the problem??If its going to be these way i lose victims that have installed xp...can anyone post me any answer with the solution...

Plz help...

Thnx advance

P.S can anyone help me to set up Java drive-by plz,it sounds cool...Thnx

Hello, Arkadiy.

What crypter are you using?

Also, after you learn how to make a RAT and create your own server. I recommend you learn how to make a

Java drive by. A Java drive by is where when you go to a site and a java error comes up saying "run" or "cancel"

when they press "run" they download your rat and there now infected. You must learn how to create a RAT first though.

Java drive by Tutorial: <https://hackforums.net/showthread.php?tid=303855>

If you need help on this PM ME ?! Note: Please try to do it on your own first before pming me.

Cheers,
Peek

Hi Peek,

Thnx for your quick reply...I am using Apex crypter,i dont know why,its the only crypter that works for me...

Thnx in advance...

E-Cig Smoker - *April 7, 2010, 7:13 am*

it. Could be the crypter, your portforwarding or you're using your local ip as the ip or the hexname when u create the server is the same as the one already on his computer only one will work so if you fixed it and resent it with the same hex name it wouldn't run anyways
