Thread: [problem with victims](#)

zik909 - June 17, 2013, 5:26 pm

Yo guys, im pretty new to this ratting thingy but i think i got a great start,

First day i had around 3-4 ppl on the list.

Second day i wake up and i had like 9-10 ppl on the list connected, then i tryed to get there passwords / checking keylogger logs and stuff, but when i pressed refresh button they vanished from my user list, what could be the problem ?

regards zik

In the beginning i just thought he/she/they might have turned there computer off, but 8-10 victims at same time ? and from different countrys around the world seems wierd to me.

Did you crypt your file. If not that's your problem.

If you did crypt your files they most likely went offline.

PurpL Kush - June 17, 2013, 5:56 pm

What RAT are you using..? Also like Jim Lahey said, if your file wasn't crypted then most likely their AV's detected it and removed it from their PCs.

zik909 - June 17, 2013, 6:15 pm

ive used dark comet server, and i crypted it to 1/35, i wont tell which crypter, but it was almost fully fud, so you guys think they went offline ?

My only guess is your file SOMEHOW became corrupted & caused you to lose all your slaves. I highly doubt every single one of them decided to turn off their computers all at once.. but it's possible, but I don't think that's the case. ?

That was exactly my thinking that it got corrupted, since i had lets say 9 victims on my server, i check 1 by 1 at the time for keylogging logs and stored passwords, when they started to refresh, BAM offline.

Maybe i need to make a new server ?

They might be ghost connects, or slaves that did not discount properly. No worries.
