For Firefox get [GreaseMonkey](#).
 For Chrome get [TamperMonkey](#).
 For other browsers: Get [Chrome](#).

What it does:

It adds any award you like to your profile! Client side of course, so it only works on your screen, and not others.

When you go to <https://hackforums.net/myawards.php> you simply press on the image of each award you want, then it will add it to your profile. You can also find that link at the bottom of the page. The text says "Awards".

This only works on people who has NOT set their browsing experience to "Display posts in classic mode." - You can change that [here](#), but if you didn't change it, then it should work. Classic mode is ticked, you need to untick it.

Thanks to my good friend [The Don Killuminati](#) for giving me this idea!

-

==-----==

Known bugs:

When you post a new reply, the awards won't get added. Deal with it. Refresh the page and they're there.

Another "bug" - You can add multiple awards by clicking on them more than once. For people who want to be a bigger whore!

Haha, that's actually pretty cool. Thanks for sharing and making this! :)

I think this may be a bug: I cannot edit my post. But I can when I right click and open it on a new tab.

Just kidding, but I love the idea of making a script which allows you to edit the awards ?

Nah, that would require too much work, and I'm not really into making a server and load external site stuff.

But yeah, what do you mean with edit? Like it is now, or add custom ones? ?

Possibly. I'm pretty sure that's why my userbar changer thing wouldn't work either. I enjoy classic mode so I guess I'll go without it.

This userscript prevents the small dialogue box from coming up when you hit "Edit" on one of your posts. (I'm on Firefox and I'm using Greasemonkey. I used the process of elimination to figure that out.)

Good hearted people should thank me with a post, instead of giving me reputation. I would appreciate that more than some numbers.

As I said a few posts back.. That would require too much from me. It would require a server or peer-to-peer connections between each user, and then this script would be very big, as it would have to host it's own network somehow..

Sorry, but I can't do that :(

For Firefox get [GreaseMonkey](#).

For Chrome get [TamperMonkey](#).

For other browsers: Get [Chrome](#).

What it does:

It adds any award you like to your profile! Client side of course, so it only works on your screen, and not others.

When you go to <https://hackforums.net/myawards.php> you simply press on the image of each award you want, then it will add it to your profile. You can also find that link at the bottom of the page. The text says "Awards".

This only works on people who has NOT set their browsing experience to "Display posts in classic mode." - You can change that [here](#), but if you didn't change it, then it should work. Classic mode is ticked, you need to untick it.

Thanks to my good friend [The Don Killuminati](#) for giving me this idea!

-

==-----==

Known bugs:

When you post a new reply, the awards won't get added. Deal with it. Refresh the page and they're there.

Another "bug" - You can add multiple awards by clicking on them more than once. For people who want to be a bigger whore!

Is this what you did lol. Pretty clever that you got it working for others :)

Why you guys are all so jealous about his awards?

Since Omni wanted to do this let him do it , even though Snorlax deserves all this (not all the awards atleast but nvm).

Let it be and continue your HF life lol.
