Thread: [Is there a way to steal emails from a newsletter website?:blink:](#)

nothxbro - June 27, 2013, 4:01 am

It's basically one of those websites that has a text box asking for your email and then after that they send you emails about their products or services. Can someone point me to the right direction? please and thank you!?

Sommmen - June 27, 2013, 4:03 am

yes, hack their database. or rat the owner to get acces :)

This, how should he just RAT.. The owner?

Op i can find you all emails for the website, but not the password .

Op i can find you all emails for the website, but not the password .

Can you teach me how to do it? I need to do it myself in order to make sure i'm getting those emails and not some random set of emails someone sells to me claiming to have gotten it from their db. (No offence and i appreciate your help, it's just very crucial that i get those emails.) Thanks

nothxbro - July 1, 2013, 6:15 pm

Anyone else know how to do this? Please help people

Spetnaz23 - July 1, 2013, 6:47 pm

Could you pm me the url? I could see if the site is vulnerable to a sql injection. If so i'll walk you though the steps on how to hack in to the database, therefore possibly optaining the email addresses, that is if they are stored the database. (They may or may not be)

won't let me pm but as soon as i'm able to do it, i'll send it to you. But from what i see i couldn't find a page with .php and id= etc so i don't know if it's possible

These e-mails get automatically sent to a (most likely secured) database or server owned by the company collecting the emails.

So if you'd want to have access to those e-mails you'd need to do one of the following:

Hack the website and get access to the database

Social engineer your way into the servers or database
Intercept the e-mails when they get sent to the server. (Most likely requires access to their network or website, and if you have access to that it's easier to do option 1).
Other irrelevant methods that are not worth the time.

Appreciate your reply, WiQQeh! Can you give me a little bit more detail on what methods i should look into in order to hack their website?
