Click the thread to PM me. :)

Swirl - June 27, 2013, 11:29 pm

Vouch for fanta, I'm actually working with him now.

FantaŠec - June 27, 2013, 11:37 pm

Thanks for the vouch, looking forward to it.

MHC - June 27, 2013, 11:39 pm

Vouch for my boi.

Legit programmer.

FantaŠec - June 28, 2013, 12:43 pm

Thank you MHC, for that legit vouch :D.

Myrexie - June 29, 2013, 6:10 pm

Vouch for my good sir Fanta

He is Amazing, HQ and cheap :)

GLWS bro

#Reliant - June 29, 2013, 6:12 pm

Vouch for Fanta, very trustworthy and skilled!

I will soon need a website to advertise my WPA cracking service.

And I will be hiring you for that.

Highly recommend FantaŠec. Vouch for him.

TronX. - June 30, 2013, 6:01 am

Hey bro! I was wondering if you would be able to program a TF2 Scrapbanking bot. I'd like to know the price, and the features it would be able to get.

Mind adding me on skype?

skype: simondeath1

Either that, or PM me for more details about what it is and stuff.

Impuhsive - June 30, 2013, 6:03 am

Vouch for Fanta! He is always trying to make some money.

Good luck with your service.

FantaŠec - June 30, 2013, 1:00 pm

People! Please realize, Javascript != Java!

FantaŠec - July 13, 2013, 12:15 am

Finishing up a site then I am free for the week, when I get my computer back on Sunday/Monday from apple.

Leaving forever - July 13, 2013, 6:05 am

Could you send me some previous work please? (e.g. links to websites you made)

SHADOW REALM - July 13, 2013, 6:07 am

Do you make any PHP/HTML crypters by any chance? Would be paying you with the sales from it if you can. Shoot me a pm if your interested

FantaŠec - July 13, 2013, 11:06 am

Well I don't believe you can crypt in solely PHP, you would need a backend (Not PHP) to process the file and crypt it.

```
<html>
<body>
<crypt darkcomet>
</crypt>
</body>
</html>
```

Just an example

NO! THATS NOT HOW YOU DO IT, I GOOGLED IT ON BING AND IT IS:

PHP Code

```
<?php
```

```
<!DOCTYPE htmlcrypt>
<html>
<head>
<cryptfile>
</head>
<body>
<startcrypt>
<exefile>
</startcrypt>
</body>
</html>
```

No silly Fanta

PHP Code

```
<?php
<!DOCTYPE htmlcrypt>
<html>
<head>
<cryptfile>
<stub>
<aes key="256 BIT GOVERNMENT PROTECTION"><xor><rc4></xor></rc4></aes>
</stub>
</head>

LOL I think you should bootstrap that shit

PHP Code

```
<?php
<html>
<body>
<div class="cryptme"><upload shit here></div>
</crypt>
</body>
</html>
```

Linux. - July 13, 2013, 8:39 pm

Can you code a crypter for me? I need it in complete Android language if that makes sense? Thanks man.

I also need a crypter done in only javascript can you do it? You can only use 3 types of commands, oh and there needs to be a lot of xml.

Thank you, Gorge Zimmerman.

FantaŠec - July 14, 2013, 11:49 pm

Preferred payment option is actually Western Union xD
