Thread: [havij cant change values ?](#)

**lxl33ch3rz** - June 28, 2013, 4:38 pm

ive been using havij as its alot easier and less time consuming than doing sql injection manually but whenever i access a mysql database that lets say controls the content of a topic whenever i change the value of a column it shows on havij as being changed but not on the website ?

for example-

<https://gyazo.com/d656ed4a286e31a308f330ed53540716>

i changed the text on page id 1 to "leecherz" but as you can see the text on the page has not displayed - <http://terdon.asc-hq.org/knowledgebase/show.php?ID=1>

even though havij says "Query was done"

any ideas ?

**bunnyyears** - June 28, 2013, 6:01 pm

Inb4 you get torn apart young one.

Havij isn't easier as it completely skips any learning process.

i know people generally take a disliking to havij and anyone that uses it but i find it alot easier personally, and even though it does limit you it also saves alot of time and effort :)

could you please link me to a tutorial on how to edit values manually then please ?

**Coded Indisoul** - June 28, 2013, 6:55 pm

No Bro It Does Not change Values Come On skype Will tell You Much more than skype manjot511

I think the video in my signature may be of use to you young padawan ?

The crux of it is that even though you skimmed a few tutorials, that doesn't mean you have learned manual SQLi, because at some point in the process you would realise why you can't necessarily do what you are trying to do. It's a good thing nobody is spoon-feeding you on this one, it will be worth it to learn the stuff properly.

thanks for the advice, i will take a more detailed look into manual injection and go from there :)

the help is much appreciated, dont often see people helping newbies :p

if you use havij, you deserve to have problems, and a lot of them

**amus3d** - June 30, 2013, 10:00 am

i dont think anyone actually explained what was going on to the guy.

basically, well as far as i am aware, havij didnt check if you have perms to alter data in columns, and just guessed (well, just went ahead and said it) you had altered said data.

**?Alexander** - June 30, 2013, 10:19 am

Havij won't do the job for you. Learn how to do it manually, why it works, and know what you're actually doing, then come back.

**Gee4rce** - July 2, 2013, 1:06 am

Seemz u haz insufficient Rights, meaing you can Read the db, but not write into it.

Np Dude ?

but i also highly suggest you look further into manually SQLi, using tools makes you no hacker ;)

LoL yes, i do agree with that ?

**Natalie Portman** - *July 4, 2013, 2:19 am*

HAVIJ?! HOLY FUCK.

HOLY FUCKING FUCK.

HOW ARE PEOPLE THIS BAD AT SQL THAT THEY HAVE TO USE FUCKING SOFTWARE TO DO IT FOR THEM.

YOU CAN ALSO HAVE A NICE BIG FUCKING -3 RIGHT IN YOUR SKIDDY FUCKING FACE.

I WILL FIX THIS FORUM ONE WAY OR ANOTHER.
