Thread: [How to spread your keylogger/rat.](#)

DatHacks - June 28, 2013, 9:52 pm

Hello. Today i will be doing a tutorial on how to spread your rat or keylogger or bot or whatever the hell you wanna spread. There are many methods you can use.

Spreading

These are the types of spreading I have used over the past few years, they have worked well for me.

E-Whoring

E-Whoring is pretty much pretending to be a female online in chat rooms, post a download link to your server and say that its your "Nude pics" lots of horny 14 year old idiots will download

Fake videos

A fake video is pretty much making a video of a program then uploading the video to youtube, on the download link underneath the video post your download link to your server instead of a download link to the program. It also helps if you ask friends to post on your video saying that its legitimate.

Heres an example of a fake video made by me, not that it has over 100 likes and a lot of comments even though its fake:

---VIDEO REMOVE BY YOUTUBE---

Torrenting

Torrenting is by far the best way to spread your server but its hard to get started so alot of people stay away from it, to torrent bind your server with the installation to a game or program and upload it to a torrent site, again getting friends to like and comment on the torrent would be helpful

Java Drive by

A java drive by is a site which you can make to automatically run a program (E.g. your RAT server) on a computer when it visits the site

---MORE METHODS---

Torrents: A very common way too spread files over the net

--

P2P: A few very good example is Limewire

--

IM: If you do this mixed with a bit of SE you have a good chance of infecting the victim

--

Warez: If you have a nice account which is trusted, start spreading your RAT

--

Personal Site: Upload a few files which are in your sites category binded with your rat

--

VIP: If you have VIP on a site, either make a fake tool and bind with your RAT, or leech off another VIP site and share with your binded RAT

--

Hacking Sites: Lets say you want too get.. Runescape accounts. Find a autobot or somin And bind your RAT and share on a Runescape hacking site. This way You have more of a chance of getting runescape accounts.

So that is basically it! Have fun. If you have anything to add please say so below. Thanks!

Why do you post a tutorial in the Tools and Programs section? And by the way, your tutorial is very low quality, useless.

jairjils - June 29, 2013, 6:57 am

thanks in advance! this will help me spread my RAT

I was wondering about this too, lol..

T á c o s - July 4, 2013, 9:09 pm

Hey guys. DatHacks here. I moved my account. I now have more detailed and faster and better ways to get bots/zombies/slaves/victims or what ever the hell you want. Just PM me! Thanks ;D
