Thread: [Tutorial: Ardamax Keylogger 2.8 \(Heavy on images!\)](#)

Stamgren - December 31, 2007, 9:44 am

Hello everyone. In this tutorial I will explain how to create a keylogger in Ardamax Keylogger 2.8.

First download Ardamax at http://ardamax.com/downloads/setup_akl.exe .

Then install it.

[img]http://img299.imageshack.us/img299/8364/reinstalllev4.jpg[/img]

Then click Remote Installation.

[img]http://img171.imageshack.us/img171/8499/welcomedr5.jpg[/img]

First you'll come to the Welcome screen, just click next.

[img]http://img217.imageshack.us/img217/3606/appearancewe9.jpg[/img]

Now here at the appearance you can select if you would like to bind your keylogger with another file. You can also select where you want the keylogger to install.

[img]http://img147.imageshack.us/img147/2816/invisibilityrx6.jpg[/img]

Here at the Invisibility screen I recommend you've all boxes ticked if you want your keylogger to be truly undetectable.

[img]http://img113.imageshack.us/img113/3303/securityel6.jpg[/img]

Here at the security screen you can create a password for your keylogger by just clicking enable. I made my password 12345.

[img]http://img212.imageshack.us/img212/6412/webupdatedy1.jpg[/img]

Now here you can choose if you want your keylogger to update itself from time to time. I recommend that you untick the update box as that will make it even more invisible.

Stamgren - December 31, 2007, 9:45 am

[img]http://img167.imageshack.us/img167/5215/optionsaz3.jpg[/img]

Now here you can choose if you want your keylogger to start on startup (recommended). You can also select keys to press to get up the invisible menu. CTRL+ALT+SHIFT+O for example. You also have the option to make your keylogger self destruct on a certain date.

[img]http://img134.imageshack.us/img134/3760/controlfl5.jpg[/img]

Here you can choose how often you want the keylogger to send you the captured info. You can also choose the delivery method. I'll use email for this tutorial.

[img]http://img70.imageshack.us/img70/7928/emailtq3.jpg[/img]

Now to make the keylogger send you the info you'll need to fill in your email information. (Send to/from). Then click the "Find" button to make the keylogger find your email host. Click next when you're done.

[img]http://img70.imageshack.us/img70/1121/control2qt9.jpg[/img]

Here you'll choose what you want the keylogger to capture. Web-logs for example.

[img]http://img406.imageshack.us/img406/8530/destinationxp9.jpg[/img]

Now you can select where you want the keylogger to be created. You can also select what icon you want for the keylogger.

[img]http://img184.imageshack.us/img184/9016/finishka0.jpg[/img]

Now you've almost finished creating your keylogger just press Complete to finish. Also here you can see what options your keylogger has.

[img]http://img225.imageshack.us/img225/7206/compeltedom5.jpg[/img]

Congratulations. You did it!

Now some tips how to spread your keylogger. Disguise it as a game or perhaps a picture. You can also disguise it as somekind of program or hacking software. (but remember hackers shouldn't hack hackers)!

-Stamgren

Google - December 31, 2007, 9:45 am

Go sweden

Stamgren - December 31, 2007, 9:50 am

Go Sweden indeed! :P

Google - December 31, 2007, 9:50 am

gott nytt ÅfÆ'Å,Å¥r!

ywudigiveumyusername - December 31, 2007, 9:52 am

So how do we get this onto another persons PC if we don't have access to it?=-

Google - December 31, 2007, 9:53 am

ywudigiveumyusername Wrote:So how do we get this onto another persons PC if we don't have access to it?=-

you bind it with a picture

caZZuTo - December 31, 2007, 9:54 am

yea google, it's that easy...pfft gain knowledge then give out information.

Stamgren - December 31, 2007, 9:55 am

Google Wrote:gott nytt ÅfÆ'Å,Å¥r!

Fy fan vad full man ska bli ikvÅfÆ'Å,Å¥r!! xD

ywudigiveumyusername - December 31, 2007, 9:55 am

But how can I send it through the internet? Like he clicks that, or that and gets this keylogger...

Google - December 31, 2007, 10:00 am

stf man you no name

Stamgren - December 31, 2007, 10:02 am

Let's say you bind it with a JPG file. Then you could just take alot of other pictures and then put them all into an .rar file. Now MSN and most antivirus software will not detect it. But there's a chance that the antivirus software will detect the keylogger when the victim extracts the JPG files.

Stamgren - December 31, 2007, 10:03 am

what? isn't it that if you bind it dosent that in is in the bakround and there for make it 100% undetectable

quickmoneytoday - January 1, 2008, 6:05 am

Very nice! I hope to start. Need to learn how to disguise it now. This is the first time that I finally learned something on this forum.

girindahouse - January 1, 2008, 6:16 am

helped me alot:) disguised as cheats codes for pc games

quickmoneytoday - January 1, 2008, 6:20 am

But lets say the person downloads the file that has a bunch of pictures. And he clicks on the keylogger file, and the keylogger would get installed. Wouldn't there be also no picture?

girindahouse - January 1, 2008, 6:36 am

the pic will be shown to the victim whilst the keylogger gets installed

as far as i know :)

quickmoneytoday - January 1, 2008, 6:38 am

Is it possible to create a keylogger where the person just visits a site, and gets it into his computer?

quickmoneytoday - January 1, 2008, 8:16 am

I just created one. But I had a problem entering my email address, when I would press send, it

would give me an error.

I just tried it on myself, and when I opened the picture, my antivirus software told me that there is a keylogger.

Stamgren - January 1, 2008, 9:14 am

Here's the thing with Antivirus software. It will always go one step further and alert you when it might...be an possible virus situation. Meaning most antivirus software will block and delete hacker tools on your computer. Such as Ardamax.

So always turn of your antivirus software when you're going to be handeling with hacker tools.

When I made my keyloggers I used my school email to send the info to. As I couldn't use hotmail. Try using a Gmail, Yahoo email account or other and it might work.

girindahouse Wrote:the pic will be shown to the victim whilst the keylogger gets installed

as far as i know :)

That's correct the binded file will execute and the keylogger will be silently installed.

quickmoneytoday - January 1, 2008, 10:28 am

I installed Ardamax, and I cannot find it on my computer, so I could create another one. How can I find it on my computer?

Tonka - January 1, 2008, 7:28 pm

Great tutorial. ;)

Can we speak English here because I would like to be able to read it.

Trogg - January 2, 2008, 10:34 am

Would it be possible to copy this program directly to the computer you want to spy on? and make it send the details to my computer.

Thanks

Trogg

Google - January 2, 2008, 10:45 am

this should be a sticky

alboG - January 2, 2008, 12:08 pm

umm why is my remote installation feature gone when i right click it there is no remote installation

flobbit25 - January 2, 2008, 1:08 pm

hi every 1 sorry if this anoys youse but i am a complete noob to hacking just now, but i installd the programe and did every thing it said for remote instaliation, and i sent it over msn and in a email to my friend to see if it workd but no joy. any 1 have any ideas where i could be going rong?

alboG - January 3, 2008, 2:44 am

you probably did the email thing wrong

flobbit25 - January 3, 2008, 3:05 am

yea i thought it mite be the email part, cos when i press test it comes up an error msg, how is it you do it properly?

Tonka - January 3, 2008, 4:32 pm

Watch Tutorials and learn how I'm sure there is one posted.

alboG - January 4, 2008, 3:58 am

use an ftp its better

Kuroda_Shun - January 4, 2008, 6:30 am

if your not using an ftp server remember to check your router settings.

calicokroll - January 7, 2008, 1:47 pm

DO NOT DOWNload

Skittles- - January 7, 2008, 5:38 pm

If your looking to get something to run the file, make a sfx file with your keylogger exe in, preferably undetectable. and in the comment add example:

```
;???????????????
```

```
Path=%SYSTEMROOT%\system\  
SavePath  
Setup=1.vbs  
Silent=1  
Overwrite=1
```

changing the Setup=1.vbs to your exe like.. Setup=server.exe

change the icon of it, and then add it to a .rar file as a setup file and you should be good to go.

alboG - January 8, 2008, 2:35 am

why is my remote installation gone????

Aeterno - January 8, 2008, 5:25 am

when i downloaded it it said TROJOUN ALEART does it still do that?

Tonka - January 8, 2008, 7:15 pm

Maybe because its a hacking tool its classed as a virus.

Download at your own risk!!

Gedasss - January 9, 2008, 4:43 am

And what i can do when i send it to other computer?

alboG - January 9, 2008, 4:56 am

u can view what keys they press on the computer what websites they visit etc

Gedasss - January 9, 2008, 6:36 am

If i send it to other computer antivirus can find it?

In appearance i don't see File path. Why?

I think i added keylogger to screen. Now i can send it to someone? If computer admin not open screen he don't get key logger?

Tonka - January 9, 2008, 5:11 pm

alboG Wrote:u can view what keys they press on the computer what websites they visit etc

Yes also the main one usernames and passwords.

ken50 - March 1, 2008, 11:00 am

Thanks for the tut !

JonathanCGS - March 1, 2008, 2:00 pm

Thanks for this i am tryin to do a remote install but on the Appearances page it does not give me an option to attach the keylogger to a file.. it just looks like this:

[img]<http://img90.imageshack.us/img90/4607/asdfasdfwk0.jpg>[/img]

Useless - April 21, 2008, 8:21 pm

nice, nice.. only suggestion I would give you would be to explain furthermore some stages.. but except of that.. it was excellent good job

dark-shaddow - April 21, 2008, 9:30 pm

Nice

Good Job!!!

Helping us Noobs!

Useless - April 21, 2008, 9:44 pm

JonathanCGS Wrote:Thanks for this i am tryin to do a remote install but on the Appearances page it does not give me an option to attach the keylogger to a file.. it just looks like this:

hmm are you sure u have ardamax 2.8 and not 2.9 ?

asmir_cracker - April 22, 2008, 5:21 am

thanks for this :D

Blackrosex - April 22, 2008, 6:50 am

Sweet work i'm going to try it out for myself :P

Trouncing - April 22, 2008, 9:23 am

Okay. I installed and done everything, as prompted by the tutorial, but when I right click on the icon in the toolbar, it doesn't have "Remote Installation" in the menu at all. Anyone that knows what the problem is, please send me a PM, as I am about to go to work and I have no clue when I'll be home. Thanks. :)

kidude16 - April 22, 2008, 4:30 pm

can anyone tell me where to download ardamax v2.8? ive searched everywhere, and its either a virus or v2.9

Hacker2008 - April 22, 2008, 5:26 pm

"it doesn't have "Remote Installation" in the menu at all"

just downloaded it, and the remote installation doesn't show up on my either, is it due to the fact i dont have this product registered?

twinsin82 - April 22, 2008, 6:41 pm

This keylogger was pretty good. But now its detected by pretty much every anti-virus. I tested it on my computer and it got detected instantly and when i disabled my anti-virus to further test it the FTP delivery didn't work at all.

twinsin82 - April 22, 2008, 6:43 pm

as for the people who need the full version with the keygen its right here

<http://#.com/files/51914284/Ardamax.Keylogger.v2.8.rar.html>

Inevitable1337 - April 25, 2008, 1:00 am

Quote:Now to make the keylogger send you the info you'll need to fill in your email information. (Send to/from). Then click the "Find" button to make the keylogger find your email host. Click next when you're done.

Wait! In the "send to" do I put my email or the victim's? And vice versa regarding "send from" ?? Or are they both for my email?

I think Send to = my email // send from = victim's email , but I'm not sure!! HELP

sangederomin - April 25, 2008, 1:03 am

in the send to and from information it shouldnt really matter. its just asking which e-mail you want to use to send the logs, and which e-mail you want to use to recieve them..... at least thats the impression i get when i first hear this (didnt read the entire thread)

Inevitable1337 - April 25, 2008, 1:06 am

Google Wrote:gott nytt ÅfÆ'Å,Å¥r!
msn or icq transfer it.

super_noob - April 25, 2008, 1:09 am

ok now after i send the keylogger to someone

when he click on it will install itself but is he going to notice its installing ?

sangederomin - April 25, 2008, 1:13 am

if he's smart he will notice something fishy is going on with cpu, or something simmilar. you should test it on yourself before you send it out

Inevitable1337 - April 25, 2008, 1:22 am

sangederomin Wrote:if he's smart he will notice something fishy is going on with cpu, or something simmilar. you should test it on yourself before you send it out
Check my post again :P need your help ^^again

zickyjacks - September 21, 2008, 6:51 am

ok i followed the tut word for word when i get to the email i hit test and it says "Failed to connect to SMTP server" can someone help me on that?

Soldier of Fortune - September 21, 2008, 7:12 am

Yes, your e-mail address has to be made/hosted in your country. Example, I tried to receive the logs using the yahoo e-mail but it just wouldn't go-

kode-x - September 21, 2008, 7:17 am

The security with e-mails now a days makes it a better choice to use ftp for log delivery. People still prefer e-mail though.

coolgirl - September 22, 2008, 6:03 am

I did everything. On my backup-computer, where I stopped AV-program.

Installed winrar

installed .net framwork
Installed ardamax 2.8
installed easy binder
made an icon with favicon

and started to use it:
created a ftp account with drivehq
created a remote installation called Install.exe

then I "binded" it with easy binder, using a photo.

The output is an .exe file. There is no way to chose another file extension.

Unfortunately this exe file can't be mailed, neither by hotmail nor by gmail. My target (double cheating hubby) has hotmail-address.

Tried Msn. It was possible to send it but unpossible for my other msn account (on main computer) to receive it.

Because obviously on main computer I need a "real" environment with Avast very much active.

So I put it on an SD-card and tried to open it on main computer (I could give the card to hubby and tell him there are som nice photos).

BUT Avast goes completely crazy. And me too!

What am I going to do now?

So please, is there anyone out there that can help me?

How on earth do I hide the engine so that AV doesn't find it?

?

? to anyone can help me out

JMobile - September 22, 2008, 2:13 pm

coolgirl Wrote:My target (double cheating hubby) has hotmail-address.

If you wanna get even...you can PM me. ? wink, wink ?

Does this tutorial still work by the way? Its kind of old...

coolgirl - September 23, 2008, 2:38 am

JMobile Wrote:If you wanna get even...you can PM me. ? wink, wink ?

No I just want to know what he's up to, so I can end semi-relation or continue without getting emotional or continue the old-fashioned way.

JMobile Wrote:Does this tutorial still work by the way? Its kind of old...

No. Too old, but I didn't know that. Anyway, learned lots of new stuff, mostly terminology though.

Ç?poÉ"Ä± icode - September 23, 2008, 3:03 am

coolgirl I think maybe in your case a RAT (remote administration tool) might be a better way forward than just a keylogger. one I would suggest is optix pro. feel free to pm me if ya want any help

coolgirl - September 23, 2008, 4:09 am

iCode Wrote:one I would suggest is optix pro.

But symantec says both prorot and optix pro are easy to contain and remove. So I don't want to lose another two days on those. AND he's got a Vista system, and both of these RATs don't infect Vista-computers, or am I wrong?

Ç?poÉ"Ä± icode - September 23, 2008, 4:36 am

yes as they are old an relatively widely used, a lot of av will pick them up. I don't know about vista compatibility as iv only ever tested them on xp systems. do you have access to your targets computer? as u may be able to create an exception for the rat/keyloggers process so the anti virus just ignores it

JMobile - September 23, 2008, 11:32 am

coolgirl Wrote:JMobile Wrote:If you wanna get even...you can PM me. ? wink, wink ?

No I just want to know what he's up to, so I can end semi-relation or continue without getting emotional or continue the old-fashioned way.

Darn....?

haha, anyways if you guys are still living together and sharing a network for internet and all you want is his passwords and usernames, get Cain and Able.

Works like a charm.

coolgirl - September 24, 2008, 12:07 am

OT!

JMobile Wrote:Darn....?

sorry about that. but I don't believe in virtualisation in these cases. There must be chicks closer to where you live, rather than getting on a transatlantic plane.

JMobile Wrote:get Cain and Able.

Works like a charm.No we don't live togheter, he wants to marry me though (!), but I'm pretty sure he's another girlfriend too.

So it seems I need a home-programmed rat/keylogger. Which I'll never be able to do, since learning programming would be much fun, but too taxing what with job and house and kids.

Soldier of Fortune - September 24, 2008, 2:12 am

Just plant one when you get to his house. Trojan, I mean.

Vaqxine - September 24, 2008, 2:32 pm

What's the "Username" and "Password" options for where you fill in your email? You left them blank.

-(PYR0T3CHNICS)- - September 24, 2008, 2:50 pm

I don't know if anyone noticed this, but on one of his pictures, he has his IP.....

Soldier of Fortune - September 24, 2008, 3:18 pm

.Ryoushi Wrote:What's the "Username" and "Password" options for where you fill in your email? You left them blank.

Not needed, only if you insist put what you want.

Quote: don't know if anyone noticed this, but on one of his pictures, he has his IP.....

So??

Mo.Ckba - September 24, 2008, 3:28 pm

nice tutorial

Rally the Bulls - September 24, 2008, 4:08 pm

what language are the pictures in?

Herrict - September 24, 2008, 9:32 pm

When I get to the end where it is creating the remotekeylogger.exe it says that it could not make it, to make sure my AV is disabled, and that it cannot find the specific file.

I've disabled my AV yet it will still not create the .exe. Is it because of Vista?

JMobile - September 24, 2008, 11:11 pm

coolgirl Wrote:OT!

JMobile Wrote:Darn....?

sorry about that. but I don't believe in virtualisation in these cases. There must be chicks closer to where you live, rather than getting on a transatlantic plane.Haha, I don't like anything that has to do with cyber or virtual either when actual physical activities can feel alot better. ?

coolgirl Wrote:JMobile Wrote:get Cain and Able.
