I hope you people like it. And yea, I know the "Connection Limit" thing sucks, but yea, I will be shortly releasing a private version of this booter, which will have no connection limit and having more features like Password Stealer, Adding friend List and Enemy List, option to change the background image and more...

Suggestions are always welcome. I will increase the connection limit a bit when I release the 1.2 version of this. It will have a few SURPRISE options in it! Please kindly report ANY kind of bugs that you may find.

While it is unfair - it happens to everyone

especially since you just took the source and basically re-released it after changing a few codes - change the gui and make it more your own and then do a release - you'll get a lot more replies...

To have someone review it would also be a plus to you.
