Thread: [Need Super Simple Crypter SRC. pls read!](#)

pcpr - July 1, 2013, 12:11 pm

Hello HF

i only need the src of a crypter that makes my exe in decompilers unreadable.

nothing more nothing less :)

tweety - July 1, 2013, 12:15 pm

Something like that does not exist for .NET apart from VirtualNet which is now open source.

pcpr - July 1, 2013, 12:20 pm

wat ? i dont know the latest news please tell me !

Make your own, or search Google, YouTube and HF.

Washi - July 1, 2013, 12:23 pm

You have to understand crypters are not software protectors. If you are looking for a source code that will protect another application from being decompiled, you should search for an obfuscator.

Well, DotNet Resolver might be able to open the protected application, but probably fail to translate the methods into readable Visual Basic or C# source code (you can however read the raw msil). Next to that if you are using runtime based protections such as method encryption, DotNet Resolver wouldn't have a clue what to do. My application is a decompiler and not a deobfuscator, and therefore it would not be able to decrypt protected applications.
