Thread: [I need help decrypting Facebook UDF2 - udf2 hash](#)

TheDevastator - July 1, 2013, 9:37 pm

Can some please help me decrypting this UFD2 hash, it is very important to me.

Please PM me.

mohit - July 1, 2013, 11:33 pm

"UDF2 is just a scam really. UDF2 is not a hashing method, it's just an MD5 of some ones email and you can sometimes find them on <http://md5decrypter.co.uk> . You most probably went on one of those free facebook hacking sites and this scenario happened:

You: I need a facebook hacked

Random Website: Sure bro, it will take a couple of hours

You: Oh sweet, never knew people would be so kind

....

Random Website: I found the hash for the users password... here it is...

You: Thanks but how do I decrypt this?

Random Website: We can do it for you on our special decrypter but it will cost you

You: BRB to hackforums to get it decrypted for free.

Does that sound about right :P?

Ufd2 doesn't exist. Ufd2 is just an MD5 hashed email that those Facebook camming sites use. They happily retrieve this lovely UFD2 hash for free but then you have to pay for the 'decryption'. It's not going to be any password, and if you want your Facebook account back then contact Facebook support or try use a recovery method on the account."

Thanks for your input, that helps a lot.

Yes this is a facebook account.
