Thread: [Need help port forwarding my port.](#)

DangerousKid - July 3, 2013, 11:27 am

This time I'm gonna ask a question without any info at all because the last time I asked this question in a different category and it was deleted but I don't know why, I never gave out my ip address or personal info, just my port number and that's probably why. This time I'll ask in a different category even though I'll receive a reply 5 hours later or no reply at all since this category is so inactive! ?

So in order for me to receive info from my RAT (Blue Banana) it's gonna need my port. So I went to see if my port was open or not and found out it was closed because the connection kept timing out. But I doubt following the tutorials and going through my router settings will solve this problem because I did it yesterday and came short. So I think it's my firewall blocking my port.

I tried going to my firewall so it can allow my port to go through but it won't let me do anything, all it's doing is giving me a error message. Please help me! How can I adjust my firewall settings and allow my port to go through? I need it for my Blue Banana RAT.

Btw I already have a No-IP account. But the only problem is my bloody port won't open ?

mdjvs13 - July 4, 2013, 1:38 am

i could give it a try add me on skype: mdjvs13

Ebol? - July 4, 2013, 1:39 am

Have you actually gone into the port forwarding page on your router page, and forwarded a different port?

arcticmunki - July 4, 2013, 2:12 am

Deleted 35 character, when will you end, my dear old friend.

OK so I did some research to find out and get to the bottom on why I can't change my firewall settings.... one person had a identical problem I had and many people said he must do a computer scan because it sounds like a virus/malware trying to trick him. So I decided to do a full scan (AVG 2013 Free Edition) and found a total of 17 threats. So I removed all 17 but my problem still remains. I have some pictures to show you.

[img]http://i1223.photobucket.com/albums/dd504/brandonpearson/WindowsFirewall_zps091f123e.png?t=1373254892[/img]

^^ I can't do anything, no matter what options (left side) I click, it keeps telling me to update some sort of recommended settings or something. This shows everytime I go to my firewall settings.

[img]http://i1223.photobucket.com/albums/dd504/brandonpearson/WindowsFirewallsettings_zps2c851a07.png?t=1373254985[/img]

^^ And this is the annoying message that shows up everytime I try to click the "Use the recommended settings".

I really wanna be able to port forward my port but I think this is the reason why my port is blocked. It seems like I can't succeed at anything, there always seems to be something in the way no matter what ?. If you have any assistance or help me figure out how to get by this problem, maybe you can prove me wrong.

And btw, if this really is a virus/malware does this mean my computer protection (AVG 2013 Free) is unable to detect it? And does this mean my computer is vulnerable and anyone can plant a RAT/keylogger on my PC without me knowing? If this is the case that means I'm going to need immediate help because if my parents find out their going to kill me!

I had a similar problem when messing around on a different RAT. My main problem was that the port was closed and the connection was timing out. I had even gone through and made an exception on my router for my IP and forwarding the port I had chose. I had then put my router into DMZ, which instantly worked afterwards. Try that and see if that helps your case at all.

Hwo do I port forward on VM with MULLVAD VPN?

urbandesi - January 18, 2017, 8:00 am

Your router and browser IP is same? If not then You need static IP my frnd. #peaceplayer

Hackism - January 19, 2017, 5:09 am

simply get a vps and install your rat there.

also all vps have open ports already. no need of portforwarding
