Thread: [H-Keylogger || FUD || 8\\$ || Limited Copies || Vouched ||](#)

stdio - July 3, 2013, 11:38 am

Introduction

H-Keylogger is the cheapest and simplest keylogger on HF, it has specially been designed for beginners. A very detailed and noob friendly tutorial is also provided.

I sell limited copies of H-Keylogger to keep it FUD for a long time and to provide excellent service to my customers.

It has been around for 8 months and has 50+ vouches (see my reputation or past threads regarding H-Keylogger).

Razorgecko - July 9, 2013, 9:19 am

This crypter is great and is really worth the money, I mean it is ridiculously cheap and it's FUD, the file pumper is also quite cool! Also Homi is always happy to help if you have any problems.

Conclusion - July 9, 2013, 9:20 am

I'm seriously disliking the design of it, which is making me not want to purchase.

Anyhow, good luck with your sales, sir.

May I ask, what is the output when people backspace?

Does it actually show a backspace or remove that character?
