Thread: [*~~*How To Get Peoples IPs*~~* \(Link/Skype/Skype Beta/Hamachi\)](#)

ikyogre1 - July 3, 2013, 3:39 pm

This is my first tutorial, please post what I can do better so I can fix it.

Get them to click a link:

Step 1: Go to <http://whatstheirip.com/>

Step 2: Enter your email

Step 3: Give out the links to the people you want to snag their IP.

Step 4: Check your email!

? So Happy! ?

Skype:

You MUST know their skype name. If you don't know it, right click their name, view profile, and it will be there.

Step 1: Go to a skype resolver, I like #, as it shows if they are on a proxy or not.

Step 2: Enter their skype name into the resolver.

Step 3: Their you go :)

Skype beta:

Follow the directions in the regular skype tutorial if you don't know their skype name, then follow these.

Step 1: Go to a skype resolver that says it works with Skype Beta. I like GrabThatIP, <http://www.grabthatip.com/>

Step 2: Enter their skype name into the resolver.

Step 3: Enjoy the IP ;)

Hamachi:

Step 1: Join a room, or convince the person to join a room you are in. Depending on the person, this step can be the easiest part, or the hardest part.

Step 2: Right click their name, click details.

Step 3: Click details that is to the right of summary.

Step 4: A box should pop up showing their IP.

If you need tutorials for any other programs, or need help with these, Post below!

? Blow off fireworks, and have a great 4th of July! ?

? Do NOT use this tutorial to do horrible things to people or super man will get you! ?

Wow! Thanks, I'm doing this on all of my skype friends :D

EDIT:

I'm actually not getting the email :(

This now made impossible by Microsoft. They finally patched the method.
