Thread: [Any possible way to hide tasks in process manger \(CPU HIDE\)](#)

KingRaider - July 4, 2013, 12:17 am

Alright so if anyone has sent something that really use's a lot of there CPU. Is there something that can mask it over so it makes the computer think its not using it? (Or display that the CPU is really at 100% idle instead of like 50%. Then also make it disappear in the process manager.

If anyone needs help help understanding let me know.

PatSec - July 4, 2013, 12:49 am

I also would like help with this. Thank you in advanced.

tux1 - July 4, 2013, 5:47 am

Yes you can use a tool called a rootkit, this will help hide things from the task manager.

However why is the CPU at a 100%, are you running a BTC miner? Even if you hide the process the pc will still be slow and the fan will be going.

Sky - July 4, 2013, 7:16 am

Getting into rootkits may be a bit advanced for him. Buy a Crypter with good injection & persistence/protected process.

~Arcane ?

Im using LTC miner, when people see there pc idle at 25% they freak out. (I know I would) sooo, if I hide it and make it look normal ;) ill be set. I found a crypter that can do it >:D
