Thread: [Looking to find a program that copys the hard drive](#)

OutKastMiner - July 4, 2013, 6:30 pm

Like the title says i am in search of or wanting to learn how to get a program on a portable hard drive and when i plug it into a computer it will start copying everything on that computer HD (my own spare computer i use just for testing) also more info in what i am looking for is for when or if there is a program that once i plug it into the computer , that it will auto start the copy while hiding in the background so you cant even tell its there?

is there any program like that?
can it be made like that?

denisthemanice - July 4, 2013, 6:32 pm

It can be maded in Visual Basic 2010/ C++ or something like that .
But it will be really hard.

'hard'

This can be done in batch...

Code xcopy /s c:\ 'Your Drive Here':\

Check this program out if you can install it on your windows computer. They also mention a program called System Recovery something-or-other that may be more helpful. Make sure you do the raw copying, it'll make things easier when you want to write the image later.
