Thread: [Got the Username and Password but Password Inccorret?](#)

No0b3rT - July 5, 2013, 6:05 am

So I'm kind of new to this whole SQLi thing. I would normally do it with BackTrack but I actually wanted to learn for myself lol.

So I got a vulnerable site, go to the Login Password bs and I got this

I found username and password in the table 'users' so after I did the

concat(username,0x3a,password)

it gave me this

then I found the admin page but the password is incorrect.

So now what? lol

webspider - July 5, 2013, 6:08 am

The password seems to be encrypted. You would have to decrypt it to work.

No0b3rT - July 5, 2013, 6:09 am

(Jul 5, 2013 06:08 AM)webspider Wrote: [\[CITE\]](#) The password seems to be encrypted. You would have to decrypt it to work.

That's what I figured too lol.

How do I figure out which way it's encrypted? I figured it'd be MD5 but it wasn't.

The site you injected, what's it running?

No0b3rT - July 5, 2013, 6:13 am

(Jul 5, 2013 06:12 AM)N1T3ST4LK3R Wrote: [\[CITE\]](#) The site you I injected, what's it running? I assume you're talking about the SQL Version?

5.1.68-cll-lve

(Jul 5, 2013 06:13 AM)No0b3rT Wrote: [\[CITE\]](#) I assume you're talking about the SQL Version?

5.1.68-cll-lve

Then it should be SHA-1, I believe.

No0b3rT - July 5, 2013, 6:31 am

(Jul 5, 2013 06:21 AM)N1T3ST4LK3R Wrote: [\[CITE\]](#) Then it should be SHA-1, I believe. When I go to decrypt it, it tells me not found for everything so far lol.

SHA1, MD5, NTLM

N1T3ST4LK3R - July 5, 2013, 6:34 am

(Jul 5, 2013 06:31 AM)No0b3rT Wrote: [\[CITE\]](#) When I go to decrypt it, it tells me not found for everything so far lol.

SHA1, MD5, NTLM

Then that particular hash hasn't been cracked yet.

No0b3rT - July 5, 2013, 6:35 am

(Jul 5, 2013 06:34 AM)N1T3ST4LK3R Wrote: [\[CITE\]](#) Then that particular hash hasn't been cracked yet.

So now what do I do? Should I just forget the site and try another?

You could ask around the Crypto section, and see if someone will brute force it for you. Or even better, read some tuts and learn to do it yourself. (Not trying to sound mean or anything, just a suggestion. If you learn to do it yourself, you'd be better off down the road.)

Meaps - July 5, 2013, 7:04 am

It's encrypted OP, google to decrypt it ;)

Hey, so i see you needed help, can you try this pass to use with the logon?:

Code 19830713

I forgot the website now lmao.

Greeaatt

Just out of curiosity, what did you do to decode it?

Dark4Hack - October 24, 2018, 2:12 pm

It's seems you are tired after trying All Methods Let's Try this one May Be It ll work For You decrypt it With Base64

krlo-s - October 24, 2018, 3:38 pm

Wow, that was a rough necroposting

vimtox - November 9, 2018, 10:58 am

Was encrypted in md5 password is: p@55w0rddv1
