Thread: [nmap on a kvm vps running windows](#)

Cakeb\$\$\$ - July 7, 2013, 8:08 am

Ok guys just bought my first Kvm server to run a little rdp bruting on. Installed nmap after a lot of issues and now when i run my batch file to scan for some rdp's it runs and then closes almost instantly without giving any errors. Any ideas? also should this be in the vps section or here ?

c'mon guys i need this to work for me.
