Thread: [GRE Tunneling alternatives?](#)

Loomaanaatii - July 8, 2013, 9:49 pm

Hi.

I have a Dedicated server running Ubuntu 12.04 with minecraft on it. It keeps getting hit with ddos so i picked up a ddos protected VPS (Centos). I was wondering is there any way to route mine craft through the VPS to the Dedi? Since the VPS has ddos protection this would be good.

I found a guide on how to do GRE tunneling but they say it only works on centos and the dedi is ubuntu. Is there any other something like gre that works on both oses?

Thanks.

A simple SSH tunnel should do the work i guess...

<http://www.debianadmin.com/howto-use-ssh-local-and-remote-port-forwarding.html>
<http://www.revsys.com/writings/quicktips/ssh-tunnel.html>
