Thread: [How to secure your Skype\(For the most part\)](#)

#Reliant - July 9, 2013, 4:10 pm

How to secure your Skype, by #Reliant.

First you want to make sure you disconnect your Skype and Facebook accounts -

Then you want to sign into Skype and go to your profile settings and set everything to be blank as seen below -

[img]http://img689.imageshack.us/img689/9418/csgx.png[/img]

Hope I helped you guys,and remember,this wont make your Skype impossible to jack,but it should make it a lot harder.

Mr. T - July 9, 2013, 4:14 pm

Seem like a helpful tut,

But i don't understand why the profile would be private. the harmful thing there is to skype is if someone resolves it.

Setting all the info to private helps keep people from jacking it.

Spac? - July 9, 2013, 11:21 pm

I know a lot of people who's Skypes get hacked, This should help! Thanks for the tut!

Edit: Everyone should do this, It is WAY to easy to take Skypes now.

OhMaMa - July 10, 2013, 4:42 am

Ill contact you i have few questions regarding this one...

Vexane - July 10, 2013, 5:19 am

Awesome, really simple, but never really thought of it, thanks!

Rymax99 - July 10, 2013, 5:23 am

Most chat applications are peer to peer. Skype patched the resolving thing, just enable the option in advanced connections.

DDoS - Use a VPN if you're worried. (A VPS is perfect to create your own VPN)

Skype stealing - Always a risk, IMO. The little amount of knowledge you need of a person to 'recover' their account is just retarded.

Good tutorial though.

? Ace of Spades ? - July 10, 2013, 5:42 am

simple tutorial but really use full information. thanks for share ..

I'm not trying to fight you, I'm just offering some of my knowledge, but I did just find this Skype resolver that works most of the time (sometimes the servers are down) here's the thread link <https://hackforums.net/showthread.php?tid=3604423>

I???I??¢? - July 10, 2013, 7:31 am

Skype is improving there security question and most people already knew about this.

This is for the people that didn't.

?

hejsan95 - July 10, 2013, 9:03 am

Thanks for the simple tutorial now i can fix my skype ;)

Good tutorial though.That won't be enough, send a file or call the person and they have your IP.

#R00T~ - July 10, 2013, 9:07 am

great tutorial thank you for this. :) :) :)

SilverNET - July 10, 2013, 9:33 am

most of us knew this, but thanks for sharing it. It is a really good tutorial tho. :)

Alex© - July 10, 2013, 9:55 am

Really simple yet useful tutorial. Thanks for the post.

#Reliant - July 12, 2013, 2:44 pm

I am glad I helped you guys.

If you need help with anything PM me.

Neteros - July 12, 2013, 5:05 pm

This is something i didn't think of. Thanks for reminding me
