Ah nice to see people that are helping the new ones:)

josimc - July 17, 2013, 5:16 pm

So I go to try and rat myself with my rat (I use dark comet) and it isn't showing up in my user section of dark comet.

Understalker - July 17, 2013, 6:13 pm

(Jul 17, 2013 05:16 PM)josimc Wrote: [\[CITE\]](#) So I go to try and rat myself with my rat (I use dark comet) and it isn't showing up in my user section of dark comet.

Are you using your localhost? Being 127.0.0.1

Cellulosic - July 17, 2013, 6:31 pm

(Jul 17, 2013 05:16 PM)josimc Wrote: [\[CITE\]](#) So I go to try and rat myself with my rat (I use dark comet) and it isn't showing up in my user section of dark comet.

If you are not trying to use localhost, make sure you have this check list down.

Port the RAT is pointing to forwarded

Pointing to your correct IP or no-ip link

Tzesi - July 17, 2013, 6:40 pm

Do you think DarkComet 5.3 is the "best"(in your standards) free RAT?

Understalker - July 17, 2013, 6:41 pm

(Jul 17, 2013 06:40 PM)Tzesi Wrote: [\[CITE\]](#) Do you think DarkComet 5.3 is the "best"(in your standards) free RAT?

DarkComet is indeed the best free and reliable rat I would say. The version I'd recommend getting is 5.3.1F as after that the owner had stopped creating malicious programs.

josimc - July 17, 2013, 7:30 pm

(Jul 17, 2013 06:13 PM)Understalker Wrote: [\[CITE\]](#) Are you using your localhost? Being 127.0.0.1
No I am using no-ip. Not using local host.

Understalker - July 17, 2013, 7:35 pm

(Jul 17, 2013 07:30 PM)josimc Wrote: [\[CITE\]](#) No I am using no-ip. Not using local host.
Switch to your localhost, then run it on yourself.

Tzesi - July 17, 2013, 8:29 pm

(Jul 17, 2013 07:35 PM)Understalker Wrote: [\[CITE\]](#) Switch to your localhost, then run it on yourself.
Just to make sure, localhost works only on yourself, right?

Understalker - July 17, 2013, 8:30 pm

(Jul 17, 2013 08:29 PM)Tzesi Wrote: [\[CITE\]](#) Just to make sure, localhost works only on yourself, right?

Correct, to infect others you'd need to use your no-ip host.

Tzesi - July 17, 2013, 8:56 pm

(Jul 17, 2013 08:30 PM)Understalker Wrote: [\[CITE\]](#) Correct, to infect others you'd need to use your no-ip host.

So No-IP allows you to have a Dynamic IP since you're using their "domain".Will I have any problems to consider If I'm using a VPN?

Edit: You gotta love my newbie questions :D

Understalker - July 17, 2013, 8:58 pm

(Jul 17, 2013 08:56 PM)Tzesi Wrote: [\[CITE\]](#) So No-IP allows you to have a Dynamic IP since you're using their "domain".Will I have any problems to consider If I'm using a VPN?

Edit: You gotta love my newbie questions :D

What? No-IP doesn't make you have a Dynamic IP, it is just your host, and no you will not have any issues if you're using a VPN as long as it supports portforwarding.

If you plan on using a VPN I'd suggest Anonymous' VPN which costs \$5/M as it allows portforwarding.

times558 - July 17, 2013, 11:32 pm

Great thread Understalker! I will be trying to help as many people as possible too.

Just some stuff you need to remember:

1. Use your No-IP Hostname in the IP/DNS section when building your server
2. After you port forward, make sure that you are listening on the port in your RAT and remember to check if it is working whilst listening at <http://canyouseeme.org/>.
3. If you are using a crypter, only use the minimum settings that you can in your RAT like adding the port and No-IP and do the rest of the settings in your crypter like Startup.

josimc - July 18, 2013, 8:01 am

I found out why it isn't working, it's Norton. If your familiar with Norton how can I turn off Norton without having to uninstall it.

Understalker - July 18, 2013, 8:05 am

(Jul 18, 2013 08:01 AM)josimc Wrote: [\[CITE\]](#) I found out why it isn't working, it's Norton. If your familiar with Norton how can I turn off Norton without having to uninstall it.

You should always turn off your AV's if you plan on infecting yourself. After this, I'd recommend switching from Norton to MalwareBytes as it is much better in my opinion.

How to turn off Norton:

http://www.ehow.com/how_4809406_turn-off-norton-antivirus-program.html

times558 - July 18, 2013, 8:07 am

Thank you for adding my post to the OP! Also remember to disabled your Anti-Virus and Firewall. Also Josimc, I would help but I have never used Norton, but this may help:

http://www.youtube.com/watch?v=gl_kMnB7ISl

josimc - July 18, 2013, 8:19 am

Alright, both guides were outdated/didn't really help sadly. I will not bother ratting myself I can just see if a friend will do it, or if I can find an easy slave.

So not I need a crypter. Do you guys know of a \$1 or low priced crypter or free crypter. I will admit I'm pretty poor. Thanks, I know these kind of crypters won't be that good, but it's better than nothing.

Understalker - July 18, 2013, 8:21 am

(Jul 18, 2013 08:19 AM)josimc Wrote: [\[CITE\]](#) Alright, both guides were outdated/didn't really help sadly. I will not bother ratting myself I can just see if a friend will do it, or if I can find an easy slave.

There are no \$1 crypters sadly, although you may be able to find someone selling you a single crypt for \$1, go make a thread for it in Buyers Bay.

The free crypters have a high detection rate and wouldn't do much.

Impress. - July 18, 2013, 8:21 am

(Jul 18, 2013 08:19 AM)josimc Wrote: [\[CITE\]](#) Alright, both guides were outdated/didn't really help sadly. I will not bother ratting myself I can just see if a friend will do it, or if I can find an easy slave.

nothing.

for like 1\$ you can get someone to crypt it for you (if he/she does it then always look in TV because he/she can give u her RAT or other malware.) and a free crypter is not good they are most of the time UD(undetected) and not FUD(Fully undetected)

-Sorry if I answered his question XD

times558 - July 18, 2013, 8:22 am

(Jul 18, 2013 08:19 AM)josimc Wrote: [\[CITE\]](#) Alright, both guides were outdated/didn't really help sadly. I will not bother ratting myself I can just see if a friend will do it, or if I can find an easy slave.

You cant get a crypter for so cheap like \$1. There is also some free crypters but they are not recommended since they still have about 10 Anti-Viruses detect them and it goes up fast so the creator needs to keep updating.

josimc - July 18, 2013, 8:31 am

(Jul 17, 2013 07:35 PM)Understalker Wrote: [\[CITE\]](#) Switch to your localhost, then run it on yourself. I did that, Norton still blocked it....

Understalker - July 18, 2013, 8:32 am

(Jul 18, 2013 08:31 AM)josimc Wrote: [\[CITE\]](#) I did that, Norton still blocked it....

As it should, I had no idea you still had any AV's running. To test if you have setup everything correctly, use an unencrypted server on anubis and see if you get a slave.

Tzesi - July 18, 2013, 8:34 am

I should port forward my router to "Listen on Port" value?
I'm using DarkComet.

josimc - July 18, 2013, 8:35 am

Dang.. What is the normal price range for a good crypter, I just looked in my paypal and I have \$5.

Understalker - July 18, 2013, 8:35 am

(Jul 18, 2013 08:34 AM)Tzesi Wrote: [\[CITE\]](#) I should port forward my router to "Listen on Port" value? I'm using DarkComet.

Yes, for example if I want to portforward the port 1604, I'd do so on my router, then listen to it on DC.

(Jul 18, 2013 08:35 AM)josimc Wrote: [\[CITE\]](#) Dang.. What is the normal price range for a good crypter, I just looked in my paypal and I have \$5.

The lowest I can think of is RazorCrypt which costs \$10/M.

josimc - July 18, 2013, 8:36 am

Per month??? Isn't a crypter just something you need to use once per stub you make? Or am I noobier than I thought haha.

times558 - July 18, 2013, 8:39 am

(Jul 18, 2013 08:36 AM)josimc Wrote: [\[CITE\]](#) Per month??? Isn't a crypter just something you need to use once per stub you make? Or am I noobier than I thought haha.

Yes you do only need to use it once, but it will slowly become detected so if you want to keep it always detected you will need it longer so you can keep updating your clients to keep it undetected.

If you get a long lasting crypter like CryptME, you may only need to build once in a long time. When I used to use RATs, I never updated my slaves and only made one server. Maybe this was a stupid thing to do, but I still barely ever lost slaves.

josimc - July 18, 2013, 8:47 am

(Jul 18, 2013 08:39 AM)?ETRO Wrote: [\[CITE\]](#) Yes you do only need to use it once, but it will slowly become detected so if you want to keep it always detected you will need it longer so you can keep updating your clients to keep it undetected. Maybe this was a stupid thing to do, but I still barely ever lost slaves.

Okay, well since I sadly won't be able to pay \$10 per month, what do I do? I know their are settings in dark comet before building the stub to help but is that even worth it... I don't think I'll be able to rat because of the payments sadly..?

times558 - July 18, 2013, 8:49 am

(Jul 18, 2013 08:47 AM)josimc Wrote: [\[CITE\]](#) Okay, well since I sadly won't be able to pay \$10 per month, what do I do? I know their are settings in dark comet before building the stub to help but is that even worth it... I don't think I'll be able to rat because of the payments sadly..?

You really wont have to pay every month for a crypter. Just buy it for one month. You only really need it FUD for when they first run it. Also \$10 is really cheap.

josimc - July 18, 2013, 8:51 am

(Jul 18, 2013 08:49 AM)?ETRO Wrote: [\[CITE\]](#) You really wont have to pay every month for a crypter. Just buy it for one month. You only really need it FUD for when they first run it. Also \$10 is really cheap.

I know \$10 isn't that much, but I have no income of money since I'm only 15.

Nope it really doesnt matter what the port is.

Understalker - July 18, 2013, 10:01 am

(Jul 18, 2013 09:46 AM)Tzesi Wrote: [\[CITE\]](#) So basically it doesn't matter what port it is as long as I make DC listen to it?

Not exactly, but the most common ports that I have seen used are 200 & 1604.

tylerpaul - July 18, 2013, 1:50 pm

hey man im having some huge dificultys port forwarding i have spent about 2 hours on this and still nothing when i go to canyouseeme.org it says the port isent open? IDK please skype me frzca1

times558 - July 18, 2013, 1:54 pm

(Jul 18, 2013 01:50 PM)tylerpaul Wrote: [\[CITE\]](#) hey man im having some huge dificultys port forwarding i have spent about 2 hours on this and still nothing when i go to canyouseeme.org it says the port isent open? IDK please skype me frzca1

1. Are you listening on the port in your RAT?
2. Make sure that you use the protocol UDP when port forwarding.

tylerpaul - July 18, 2013, 2:07 pm

i was under the impression i was supposed to use TCP/UDP i will try just UDP but yes i am listening to the correct port

Tutelary - July 18, 2013, 2:28 pm

How do we receive this service? Post here and PM? Post here or PM you? What?

Understalker - July 18, 2013, 3:11 pm

(Jul 18, 2013 02:28 PM)Lakai Wrote: [\[CITE\]](#) How do we receive this service? Post here and PM? Post here or PM you? What?

Just post on the thread with what you're having issues with.

Tutelary - July 18, 2013, 3:22 pm

(Jul 18, 2013 03:11 PM)Understalker Wrote: [\[CITE\]](#) Just post on the thread with what you're having issues with.

Then what? You will PM the user? You're not being clear.

Understalker - July 18, 2013, 3:23 pm

(Jul 18, 2013 03:22 PM)Lakai Wrote: [\[CITE\]](#) Then what? You will PM the user? You're not being clear.

Not sure why you're doing this, if you read the past few posts you can obviously see we are replying via the thread.

FairTrader - July 18, 2013, 3:32 pm

Hello Understalker, I have a problem with DarkComet.

When I make a new file without crypting it the file works fine and i pop up on Darkcomet when i open it.

But when I crypt the file with "EasyCrypter" that makes it fud i don't pop up on Darkcomet any longer.

I have checked my ports and they are open.

Understalker - July 18, 2013, 3:35 pm

(Jul 18, 2013 03:32 PM)Theo walcott Wrote: [\[CITE\]](#) Hello Understalker, I have a problem with DarkComet.

I have checked my ports and they are open.

That is because you've corrupted your server. Use the minimalist option on DC and check off the options you want on your crypter, instead of DarkComet.

To make sure, is EasyCrypter compatible with DC?

Bluffer - July 18, 2013, 3:39 pm

Not sure if you answered this before but you say that if you want to run a rat on yourself, use localhost, can you use no-ip, and still run it on yourself, or will this cause a problem?

FairTrader - July 18, 2013, 3:42 pm

I'm not sure if EasyCrypter is compatible with DC I got the crypter from a giveaway on HF, their official website is EasyCrypter.com.

I have also checked off almost every option in DarkComet but it still didn't work.

Understalker - July 18, 2013, 3:48 pm

(Jul 18, 2013 03:42 PM)Theo walcott Wrote: [\[CITE\]](#) I'm not sure if EasyCrypter is compatible with DC I got the crypter from a giveaway on HF, their official website is EasyCrypter.com.

Confirm with the owner that is indeed compatible with DC. The crypter isn't doing it's job and is corrupting your server.

r3d3msion - July 18, 2013, 4:48 pm

Hi Understalker, I'm having a problem with DC and I tried to infect my own PC the slave is showing. However, when I try to infect someone outside the network, the slave is not showing. my av is off, my firewall is off, and I believe that my RAT set up is right, my port 200 is open. I'm using Windows 8, I heard that all RAT is running horrible on win8. is it true? heres my First scan on my server (Uncrypted)

http://anubis.iseclab.org/?action=result&task_id=122ce30c2e063d21471bb29f71f25a609&format=pdf

Tzesi - July 18, 2013, 7:20 pm

So in theory I did everything right,
Portforwarded router to 1604

Used No-Ip host

Tried both Fast and Expert server builds

I sent the file to a friend of mine (He was willing to help, so no AVs etc.) and it didn't work.
Any ideas of where I'm wrong?

tylerpaul - July 18, 2013, 7:37 pm

stillnot working have been trying dif things for about another hour please add me on skype to help me --> frzca1 <--

Understalker - July 18, 2013, 8:23 pm

Your anubis link isn't working, as I have no experience with Windows8 I personally have no idea if it matters. If there is a slave popping up, you have correctly set it up, if not something is wrong whether it be with your setup or just Win8 in general, wait for another support member to help you out.

(Jul 18, 2013 07:20 PM)Tzesi Wrote: [\[CITE\]](#) So in theory I did everything right,

Have you tested your file on anubis first? If not, please head to anubis and enter an UNCRYPTED server to be analyzed. If all is well, a temp slave will pop up.

hey man in your opinion what is the over all best RAT! or rat/crypt combination? free suggestions only please

Understalker - July 18, 2013, 9:15 pm

(Jul 18, 2013 09:13 PM)tylerpaul Wrote: [\[CITE\]](#) hey man in your opinion what is the over all best RAT! or rat/crypt combination? free suggestions only please
Best FREE RAT, Darkcomet. Best free RAT/Crypt combination in my opinion would be none. There is simply no good free crypter.

I'd suggest Darkcomet/RazorCrypt(\$10/M) if you have a small budget.

tylerpaul - July 18, 2013, 9:18 pm

(Jul 18, 2013 09:15 PM)Understalker Wrote: [\[CITE\]](#) Best FREE RAT, Darkcomet. Best free RAT/Crypt combination in my opinion would be none. There is simply no good free crypter.

Darkcomet-RAT >> Server Module >> Full Editor (expert) - is the right direction, can't tell you the exact settings as of right now.

If you plan on using a crypter, do the following instead :

Darkcomet-RAT >> Server Module >> Minimalist >> enter the information required >> Normal

After that has been done, while crypting your server be sure to check off all options you want via the crypter.

forsaken13126 - July 18, 2013, 10:21 pm

(Jul 18, 2013 10:17 PM)Understalker Wrote: [\[CITE\]](#) Darkcomet-RAT >> Server Module >> Full Editor (expert) - is the right direction, can't tell you the exact settings as of right now.

Can I ask why you're using your own new host/domain/site that you built if it's not working properly? We currently are not offering JDB services but we may soon. There are many tutorials on JDB's on the forums, just search for them and see if you have set it up properly.

Are you using a JDB that you purchased or a free one? If its free, for the highest quality you need to purchase one and if you purchase one then you can also set it up very very easily. Also, you may get banned from wherever you host the website from. Also, if the JDB is silent, then the warning message should not come up.

daniel44 - July 19, 2013, 3:16 pm

hmm hi.

i bought a crypting service in the marketplace.
then i sent the file via skype and the rat worked.
i saw that the cpu usage of the computer was 100% by the process vbc.
it was the process of the rat.
now i don't see a connection anymore.

how can i re-establish a connection?

if the computer will restart i will get a connection again?

please i need help.

Did the person turn off their computer? If so, then you will get the person back when they restart their computer. Also, keep in mind that when buying a crypting service it can always have some problem with it depending on how the person has crypted the file as they could of done certain things with it but you never know. It really depends on how the connection was lost but you should get the person back when they next restart their computer.

Ok it should come back when the computer is turned back on if it is added to startup and it is 95% likely that it is. Also, depending on what RAT and crypter was used, you may be able to make it so it

cannot be ended in Task Manager, but you probably wont really need that.

Understalker - July 19, 2013, 9:01 pm

(Jul 19, 2013 03:26 PM)?ETRO Wrote: [\[CITE\]](#) Ok it should come back when the computer is turned back on if it is added to startup and it is 95% likely that it is. As Retro has said, you will be fine as long as you ticked off the "start-up" feature on either your RAT or Crypter, if you were using one.

AgelessChief - July 19, 2013, 9:23 pm

Okay, none of my tests are showing up on the server.

I used to use this RAT a lot and was very successful, but I can't get back into it.

Usually people say the portforwarding should be checked because that's usually why people don't show up. In this case I've tested it on canyouseeme and PFPortChecker. Both display results that the port is working and everything.

I've tried running the file on myself and a friend (which of course disabled firewall, AV, and so on, since I didn't crypt it yet) and neither pop up. The .exe is running under task manager though.

My only issue MIGHT be the no-ip updater says "Can't join remote server, trying later" I don't think that's the problem though because my no-ip host is working and I included it when setting up the server.

Understalker - July 19, 2013, 9:25 pm

Something is set up wrong, are you using your localhost(127.0.0.1) or your xxx.no-ip.___ host?

Are you using a crypter of some sort? If so, that may be corrupting your server. If you're 3. If you are using a crypter, only use the minimum settings that you can in your RAT like adding the port and No-IP and do the rest of the settings in your crypter like Startup.

AgelessChief - July 19, 2013, 9:52 pm

I just looked over it for awhile and gained a better sense of what everything is. Still I cannot diagnose the problem.

The only possible thing I can think of is that I'm running on port 1605 with it portforwarded, and I'm wondering if it has to be 1604

Switch to 1604, the most common ports used for RAT's are 200/1604.

AgelessChief - July 19, 2013, 10:37 pm

(Jul 19, 2013 10:24 PM)Understalker Wrote: [\[CITE\]](#) Switch to 1604, the most common ports used for RAT's are 200/1604.

Just tried as you said. I portforwarded 1604 and made a new .exe and still no results. Tried anubis and didn't get a test slave.

No luck.

Are you listening to your port on Darkcomet?

Kenjataimu - July 20, 2013, 12:31 am

(Jul 20, 2013 12:29 AM)Understalker Wrote: [\[CITE\]](#) Are you listening to your port on Darkcomet? Yes I am, but no luck.

I'm listening on two ports.

1604 and 200.

But canyouseeme.org says that they're not open.

Understalker - July 20, 2013, 12:31 am

If I see you're lazy and just want me to set things up for you, I will not even bother. Please make an EFFORT before trying to get me on TV.

daniel44 - July 20, 2013, 2:13 am

i bought crypting services here on hf.

now the name of the server file is software.exe and it's on the desktop.

the server location in dc is in framework-vbc.exe (that is also the process in task manager).

i hid software.exe but what will happen if he will delete software.exe from the desktop?

Understalker - July 20, 2013, 2:15 am

I am not quite understanding what you are asking but I will try to answer your question. Lets say you send your server over to him, he opens it now depending if the feature was checked or not it will either DISAPPEAR from the desktop or stay there and copy itself to where you made it copy itself to, such as temp or appdata.

times558 - July 20, 2013, 2:16 am

i hid software.exe but what will happen if he will delete software.exe from the desktop?

It doesnt matter. After the person runs software.exe, it copies itself to another location (probably AppData) where its hard to find and usually hides the folder that its in depending on the settings that have been used. Then it ends itself, and runs from the files that was copied into the other place.

If in the settings, 'Melt File after first execution' is on, then the same thing will happen but the file on the desktop will disappear.

(Jul 20, 2013 12:31 AM)Thiizic Wrote: [\[CITE\]](#) Yes I am, but no luck.

I'm listening on two ports.

1604 and 200.

But canyouseeme.org says that they're not open.

Then you have not correctly port forwarded. Go to your router, add the ports and make sure the protocol is UDP. Also put the port as anything. Try using 9003 as the port. Then, disable your firewall and anti-virus if you havent already.

awayandover - July 20, 2013, 3:24 am

Hi ! Pretty new in the RAT Section and i got some problems from the beginning.

I build my DC Server. Port forwarding 1604 and 200 (both worked at CanYouSeeMe.org). Started the Server on my own pc. Won't show up in the "Users" Section of DC..

Sitting here for like 2 hours and it just won't work lol..

Any suggestion why?

Thanks for the help i really appreciate it!

naxx - July 20, 2013, 3:29 am

Can RAT work on this port, only there is open because I don't have router.

1720/tcp open H.323/Q.931

1723/tcp open pptp

2000/tcp open cisco-sccp

If can't is there any RAT without Poort Foward??

If it is a paid crypter then the crypter should have recommended settings.

If not, I wouldn't recommend using a free crypter at all, they are useless.

If you have a small budget, I'd recommend getting RazorCrypt which costs \$10/M.

times558 - July 20, 2013, 5:47 am

(Jul 20, 2013 05:43 AM)AdamWaatson Wrote: [\[CITE\]](#) I can use DarkComet to set up everything and make the server, but what crypter should I use? (If I am not Legion can I still help?)

OP: You can put the server onto a USB and manually put it on their PC by inserting your USB containing the RAT server, and double clicking it to open.

daniel44 - July 20, 2013, 10:02 am

btw what i the "best" crypter here on hf?

i want a FUD crypter that has the following options:

file spoofer/extension changer.

custom process injection.

persistance process (comes back after closing without having to do a restart to the computer).

protected process.

on startup.

file pumper.

melt file.

and all the regular options.

there are a lot of crypters and i don't know what to choose.

the price is not really a problem.

any suggestions?

ohh another question:

what is the update server option in dc?

i tired it on my laptop and then the slave disappeared.

Understalker - July 20, 2013, 10:08 am

You might be facing the situation that your router doesn't allow port forwarding.

If I am right, I am sure you can buy VPN's that support port opening. I use Royal VPN, and it does open ports. Never tried any others though.

Understalker - July 20, 2013, 11:14 am

(Jul 20, 2013 05:22 PM)daniel44 Wrote: [\[CITE\]](#) thanks.

what is the option update server in dc?

If you want to change the options that your RAT has on, you can make a new server and use the Update Server option. Then pick the new RAT file and it will use that one instead of the last one. You can also do this if you want to transfer all of your clients to a new RAT if you switch to another one.

Parahdox - July 21, 2013, 12:05 am

Ok so I have a DarkComet Question, When i go to finalize my stub I click build stub and name it right? But underneath where you type in the name it says save as I try to click it but it doesnt come up how can I fix that?

Second Question is now when I skip the save as part and just name it and save it, when building it gets stuck on Finalizing and stays there for ages...

Port open as in it shows success on canyouseeme.org? If so, what seems to exactly be your issue?

Test an unencrypted version of your server on Anubis to make sure you set everything up, if all goes well you will get a temporary slave.

zakrib - July 22, 2013, 2:51 pm

I have a crypter and i crypted it sendd it to a person but still cant get him to popup on my darcomet. Also, what is anubis?

Understalker - July 22, 2013, 2:52 pm

Anubis analyzes your file, it can be found here > <http://anubis.iseclab.org/>

Make sure you use the minimalist option and tick the features you want on your crypter instead.

Light9159 - July 22, 2013, 2:52 pm

I have set everything up properly port forward no ip everything however the server only works on my computer i wasn't able to get any slaves so i asked my friend to test it he turned of firewall and av but nothing comes up on my end.

Supmahu2 - July 22, 2013, 2:52 pm

I need a link to a free crypter, doesn't have to be fud! Add me on skype : supmahu2 or reply to this :!

No free one, they are all garbage.

Spread using YT videos, or make a JDB and spread it to a certain group of people that would be interested by it.

Such as a Runescape JDB to people who play RS.

Light9159 - July 22, 2013, 4:06 pm

Understalker - July 23, 2013, 2:10 am

(Jul 23, 2013 02:09 AM)Wortex Wrote: [\[CITE\]](#) Do you provide with support to get slaves or infect people whatever you like to say it?

Yes we do, if you would like to infect a specific group of people, for example a Runescape member then you can either create a fake YT video on a "gold hack" or simply create a JDB and infect them

through it.

Parkwaaay - July 23, 2013, 3:02 am

Okay, I got two questions.

1st question. Why do I get a heap of failed connections on my CyberGate viewer? I have the correct password as it is the default one 'cybergate' and my ports are fully functional. Also I set it up with the same settings as I used a long time ago (I used a screenshot to make sure).

2nd question.

With my CyberGate Keylogger I only get random gibberish as a result. For instance, I am watching them type in a Facebook post and I look at the Keylogger results and it's all random letters.

If you could help I would be greatly appreciative.

-Parkwaaay

-Parkwaaay

1st Q&A - I don't exactly get what you're saying? What do you mean by failed connections on the Cybergate viewer?

2nd Q&A - Does the person you ratted have a keyboard in a different language? That may be it OR he has a keyboard scrambler to prevent people like you be able to read what they're doing and so on but I highly doubt that is the issue here. It is most likely he has a keyboard in a different language.

Parkwaaay - July 23, 2013, 3:13 am

Okay my explanation was a bit poor. I keep on getting Failed Connections, like it's up to 1348 and is still going up every now and again, and I'm not sure on how to stop it. I've searched up some solutions but they've all said that it's just an incorrect password for the server but i know i've put in the right one.

I'm confident it's not in a different language as I have previously ratted this person and the keylogger worked fine, could it be the crypter?

Understalker - July 23, 2013, 3:18 am

I am not a fan of CyberGate and cannot help you on that quite frankly.

No, it isn't your crypter. It is one of the two options I have mentioned before, maybe he got a keyboard scrambler after he found out he was ratted the first time?

Parkwaaay - July 23, 2013, 3:20 am

Ah okay, what would you recommend?

No, this person is extremely stupid, they wouldn't know that they are available, I had this individual infected for a good 4 months before I kind of fell out of the RAtIng scene.

Depravity - July 23, 2013, 3:23 am

-Parkwaaay

1.) If you're receiving a heap amount of failure to connect logs, it is most likely due to latency from ping, or you and/or your slave's intermittent, slow internet connection.

2.) I believe you have infected foreign connections (e.g. Arabic language). The keystroke logger wasn't developed to decode foreign language, apart from English.

Understalker - July 23, 2013, 3:24 am

Darkcomet, it's free and reliable.

Mhm, is the keylogger only fucked up for that specific person? If so, I do believe he has a keyboard in another language like I have mentioned before.

Parkwaaay - July 23, 2013, 3:27 am

Hmm okay, I will look into it. Do you know any decent guides that are available that would help setting it up?

I just crypted another server and ran it sandboxed and infected myself, I checked the keylogger and it showed previous results from a previous time I infected myself to test.

Although I have another infect and the keylogger was fine.

I would be able to help you set it up via Teamviewer.

If it works on others, then it is just him being semi-smart or just being lucky by having a keyboard in another language.

Parkwaaay - July 23, 2013, 3:33 am

I will see about getting team viewer.

It's weird because it is only working on one infect, my test on myself and this certain infect are just stuffing up.

Thankyou for the help :)

EDIT: Also, could I PM you or post again on here if I need help with DarkComet? I'll give it a go myself first then ask you if I can't get it running.

Understalker - July 23, 2013, 3:36 am

Gotcha.

I'd rather you post here, but if it's regarding your TV information feel free to PM me it. Also, sounds good to me!

Parkwaaay - July 23, 2013, 4:49 am

Okay I'm back. I got DarkComet and set it up following Plutonium's thread (<https://hackforums.net/showthread.php?tid=2698687&highlight=darkcomet+setup>)

I've been looking around on it and infected myself (through sandboxie ofc) and I can't seem to get the keylogger to work, I click on today's log and it's just an empty box and it's enabled. also, I found the 'Fun Functions' option and then clicked 'Fun Manager' and I clicked Hide Desktop and nothing changed. All on my self infect btw.

and so that's all I can think of at the moment but no doubt i'll be back. :)

TempSwe - July 23, 2013, 4:55 am

Do you think DarkComet 5.3 is the "best"(in your standards) free RAT?

Understalker - July 23, 2013, 4:57 am

Sadly, no. You will need a router in order to port forward.

There are indeed RAT's that do not need portforwarding, they are known as web-based RATs. An example of a web-based RAT would be iControl, but they are NOT free.

Brawler HF - July 23, 2013, 5:52 am

I have a few questions;

Do you set up RATs?

I'm sure I've done everything correct but I can't seem to infect people, maybe 1/50 people I have managed to infect.

Is it worth buying RATs? If so, any idea on what the prices would be?

Last but not least... Where exactly could I go about buying RATs?

Sorry for the amount of questions, I'm a beginner who's curious ha.

steve3aus - July 23, 2013, 6:50 am

Hey there, Ive been doing some reading about using a VPN , can you recommend a good one, and whether free ones are ok? or should I buy one? also are there any good tutorials as to how to set it up and how to use it, and can u explain simply how it works?

Understalker - July 23, 2013, 7:13 pm

i made the server -

I have cybergate turned on - and gone to can you see me -

add the port number and says - error: can not see you

Step one to portforwarding, which will now be referred to PF, is heading over to CMD and typing ipconfig.

Step two would be using the default gateway, copying it and pasting it to your web browser.

Step three, now what you will have to do is log in using your credentials. If you do not know it, then simply use admin/pass , admin/admin or user/pass which should be the default login information.

Step four, you should head over to "Applications & Gaming" then "PFing"

Step five, enter your port, which I would recommend being 200 although it can nearly be anything.
After that, confirm the settings.

Step six, head over to Cybergate and listen to the port you've chosen, in this case 200. After that go to canyouseeme.org and see if you've portforwarded successfully.

Understalker - July 23, 2013, 11:59 pm

Hm, you will have to contact the owner of the VPN as I am not familiar with it.

How are you connected to HF with a public VPN? That might be your issue, you're not connected to the VPN itself.

(Jul 24, 2013 12:21 AM)ninjadex Wrote: [\[CITE\]](#) Okay i has a new problem when my friend opens the rat it doent come up on my darkcommet plz help

Test out your UNCRYPTED server on Anubis, if all goes well, you should have a temporary slave meaning you have set everything up correctly. If you do not receive a temporary slave, you've set up your RAT incorrectly.

Blad3 - July 24, 2013, 12:34 am

hi.

i have been serching for a solve my problome like 3 days and didnt found yet.

my big issue is about port forwarding.

i need to open port to listen in dc.

so first im using 3g Cellular network, after i realased that i cant open port with that network cuz i doesnt have acces to NAT.

OK i tried VPN i thought ill had better results

and still doesnt , i tried UDP , and TCP - and it say's "NO ACCES TO THE INTERNET"

and when im try PTPP its has acces but the ports does not open at all. all are blocked.

so what i am doing wrong please help me

i wanna start rating with my cell phone wireless and dont find any way !

Understalker - July 24, 2013, 12:36 am

I am kind of confused but seems to me that you cannot portforward on your actual router.

Your only other option would to get a paid VPN that supports portforwarding, my recommendation would be to get Anonymous' VPN as it is \$5 per month, hosted offshore, no logs, & allows portforwarding.

ninjadex - July 24, 2013, 12:38 am

(Jul 24, 2013 01:44 AM)Matty1 Wrote: [\[CITE\]](#) How do i infect people with darkcomet 5.4? i was using 5.3...

You're supposed to be using 5.3.1F after that the only Darkcomet would be Darkcomet Legacy which isn't intended to be used for ratting, more like a teamviewer.

Mula B - July 24, 2013, 1:47 am

Thats what i was on before and when i installed it my firewall was disabled so they was no error, i was told its because of the encryption or somet

Understalker - July 24, 2013, 1:47 am

(Jul 24, 2013 01:28 AM)___FREE YOU TUBE VIEWS___ Wrote: [\[CITE\]](#) what is the easiest way to test for my self with a server if things are working?.

using cybergate 1.075

to see if i show on cybergate myself

Run it on Anubis or you can run it via Sandboxie.

(Jul 24, 2013 01:47 AM)Matty1 Wrote: [\[CITE\]](#) Thats what i was on before and when i installed it my firewall was disabled so they was no error, i was told its because of the encryption or somet

That's what you should be on. Not sure what you mean by because of some type of "encryption", lol. Your firewall was disabled, but your AV may have not been. If I may ask, where did you get your DC download from?

Mula B - July 24, 2013, 1:50 am

(Jul 24, 2013 01:47 AM)Understalker Wrote: [\[CITE\]](#) Run it on Anubis or you can run it via Sandboxie.

Please look a bit yourself, instead of asking for links to everything.

(Jul 24, 2013 02:27 AM)Sledro Wrote: [\[CITE\]](#) Im just about to buy a new RAT. What do you think is the best and is there any RATs that have FUD servers 24/7 ?

There will never be a RAT that will have FUD servers 24/7. I recommend NOT buying a RAT instead use Darkcomet and buy a crypter.

d3t0x - July 24, 2013, 2:32 am

I might just buy Imminent RAT and a crypter, would that not be better then darkcomet, i use cybergate atm and it sucks lol ? Are these paid crypters FUD all the time ? or will it only last for a few days then have to buy another one ?

Understalker - July 24, 2013, 2:37 am

Imminent RAT sounds good. It has good reviews so why not. Although I would never personally spend money on a RAT itself, only a crypter. If you're looking for something that is FUD nearly 99% of the time you will have to hire your own coder to build you a private crypter. Most crypters on HF work something like this: Owner FUD's crypter -> becomes detected 1 week later -> REFUD's -> rinse and repeat.

d3t0x - July 24, 2013, 2:45 am

(Jul 24, 2013 02:37 AM)Understalker Wrote: [\[CITE\]](#) Imminent RAT sounds good. It has good reviews so why not. Although I would never personally spend money on a RAT itself, only a crypter. Not sure what you mean, that slave is useless.

Sadly, I cannot. I do not have any crypters due to the fact I have stopped ratting a while ago.

br0ck - July 24, 2013, 7:27 am

Hello,

I have a problem with portforwading. Yes, I know it may sound stupid, but I know how to open my ports, but I have a problem. So when I portforwarded my port (5505), and went to canyouseeme.org it says that:

Error: I could not see your service on *IP* on port (5505)
Reason: Connection timed out

Why is that? I already disabled my firewall, also went to router settings and disabled the router firewall and the same result! I tried with another ports and it is still the same!

Understalker - July 24, 2013, 7:34 am

(Jul 24, 2013 08:53 AM)IAmDarkRaTter Wrote: [\[CITE\]](#) Understalker, do you know where i can encrypt my one small RAT? without buying a full encrypter and stuff just for one rat

Go to the "Buyers Bay" section and request a crypt for your RAT. It will be around \$1.50-2.00. Make sure to TV them when they're crypting your server to make sure it will not be backdoored.

IAmDarkRaTter - July 24, 2013, 8:56 am

fuck, it had to be when i spent \$6 for 10slaves

WuTangClan - July 24, 2013, 9:11 am

To test if your RAT was correctly setup run your UNCRYPTED server on anubis.iseclab.org. If you setup everything correctly, you will receive a temporary slave.

Hedwig - July 24, 2013, 4:31 pm

What will happen if I test my crypted RAT on Anubis?

Understalker - July 24, 2013, 4:54 pm

(Jul 24, 2013 04:31 PM)Hedwig Wrote: [\[CITE\]](#) What will happen if I test my crypted RAT on Anubis?

If you test your crypted version on Anubis it will be distributed to other AV companies and become more detected.

Hedwig - July 24, 2013, 5:00 pm

NOOO Can I just make another stub and crypt it?

Variumzky - July 24, 2013, 5:32 pm

What exactly are crypters and which one would you recommend?

And where do i get a clean link for DC Rat?

Hedwig - July 24, 2013, 7:00 pm

Crypters are programs (I think) that make your stub created by your RAT UD (undetectable) or FUD (fully undetectable). The best ones are paid and I think CryptMe is pretty good. I have a good free one, pm me if you want one. And if you want a link for a clean DC RAT then you can pm for that too.

Understalker - July 24, 2013, 7:17 pm

(Jul 24, 2013 05:32 PM)Variumzky Wrote: [\[CITE\]](#) What exactly are crypters and which one would you recommend?

And where do i get a clean link for DC Rat?

To put it in simple words, crypters make your file FUD/UD. My recommendation would be to

purchase RazorCrypt or CryptME.

<https://hackforums.net/showthread.php?tid=2632776>

(Jul 24, 2013 05:00 PM)Hedwig Wrote: [\[CITE\]](#) NOOO Can I just make another stub and crypt it? No, sadly it will not matter. Next time be sure to not scan your CRYPTED file on Anubis.

Brawler HF - July 25, 2013, 6:10 am

I'm looking to portforward anonymous VPN, I am using DarkComet. Could you tell me/link me to a guide on how to portforward the VPN?

Hedwig - July 25, 2013, 8:51 am

So since I ran my crypted stub on Anubis, anything crypted with that crypter will be detected by more antivirus softwares?

EDIT: By the way, can you try to help me set up BlackShades today?

times558 - July 25, 2013, 1:04 pm

(Jul 25, 2013 08:51 AM)Hedwig Wrote: [\[CITE\]](#) So since I ran my crypted stub on Anubis, anything crypted with that crypter will be detected by more antivirus softwares?

EDIT: By the way, can you try to help me set up BlackShades today?

If you ran your crypted file on Anubis, it will quickly become detected and the creator will have to make it his crypter undetected again which must be annoying for him and the rest of his customers so try to remember to not do that again. Also, I have never used BlackShades so I cant, but maybe Understalker can help you with BlackShades when he comes online, but have you tried yourself first?

Hedwig - July 25, 2013, 1:08 pm

Yup I've tried it myself; however, I cannot find the stub I created or it won't infect anyone (been a while; forgot).

I do not add people on Skype for help, although I offer TV assistance.

Variumzky - July 26, 2013, 7:42 am

No i did not. Trying now. Will report back.

Understalker - July 26, 2013, 7:43 am

(Jul 26, 2013 07:42 AM)Variumzky Wrote: [\[CITE\]](#) No i did not. Trying now. Will report back.

That is the issue then, re-download a SAFE link with your AV disabled and you will be fine.

Variumzky - July 26, 2013, 7:46 am

Still not working, i got the link from: <https://hackforums.net/showthread.php?tid=2698687>. AV Disabled and Firewall Disabled. Still closed.

Understalker - July 26, 2013, 7:50 am

(Jul 26, 2013 07:46 AM)Variumzky Wrote: [\[CITE\]](#) Still not working, i got the link from: <https://hackforums.net/showthread.php?tid=2698687>. AV Disabled and Firewall Disabled. Still closed.

<https://hackforums.net/showthread.php?tid=2632776>

Download the 5.3.1F (ge.tt one).

Variumzky - July 26, 2013, 7:50 am

Wait, the one i downloaded is not clean?

Understalker - July 26, 2013, 7:52 am

(Jul 26, 2013 07:50 AM)Variumzky Wrote: [\[CITE\]](#) Wait, the one i downloaded is not clean?

It most likely is as the member has tons of vouches/replies, but I'd rather you download from there and report back.

Brawler HF - July 26, 2013, 8:26 am

Using the DarkComet DDoS function, How many people will it take to take down a home connection? Using UDP.

Understalker - July 26, 2013, 8:35 am

(Jul 26, 2013 08:26 AM)Brawler HF Wrote: [\[CITE\]](#) Using the DarkComet DDoS function, How many people will it take to take down a home connection? Using UDP.

If you plan on using your slaves to DDoS I'd recommend making a Botnet.

For questions regarding Botnets, take a look here:

<https://hackforums.net/showthread.php?tid=3627212>.

Cellulosic - July 26, 2013, 9:11 am

(Jul 26, 2013 08:26 AM)Brawler HF Wrote: [\[CITE\]](#) Using the DarkComet DDoS function, How many people will it take to take down a home connection? Using UDP.

Dark comet DDOS function sucks.

Get, athena or IP killer, something around those lines.

WillTheThrill - July 26, 2013, 9:48 am

Hey, i bought anon vpn and for some reason port 1604 or any other port wont open. Anything i can do?

Understalker - July 26, 2013, 9:54 am

(Jul 26, 2013 09:48 AM)WillTheThrill Wrote: [\[CITE\]](#) Hey, i bought anon vpn and for some reason port 1604 or any other port wont open. Anything i can do?

Wrong place to ask, but have you portforwarded via the site? And are you sure you're connected to the VPN itself? You shouldn't be allowed on HF if you were connected.

Be sure that you're opening OpenVPN with Admin rights.

WillTheThrill - July 26, 2013, 9:55 am

Yes, im doing literally all of that and i disconnected from the vpn to come here.

Understalker - July 26, 2013, 9:56 am

Hey UnderStalker, you think you could try helping me with BlackShades today?

Brawler HF - July 26, 2013, 11:35 am

do you know of any sites/chatrooms that I could get gamers/female victims? I'm sick of old men now haha.

Understalker - July 26, 2013, 11:37 am

(Jul 26, 2013 11:35 AM)Brawler HF Wrote: [\[CITE\]](#) do you know of any sites/chatrooms that I could get gamers/female victims? I'm sick of old men now haha.

I do not spread anymore but if I did and it actually worked I wouldn't give it out haha.

I would recommend creating a YT video based on a game such as WoW or something and include an infected download link in the description or whatever. That should bring gamers.

(Jul 26, 2013 11:18 AM)Hedwig Wrote: [\[CITE\]](#) Hey UnderStalker, you think you could try helping me with BlackShades today?

What exactly is it with BS that isn't working?

Brawler HF - July 26, 2013, 11:52 am

Instead of trying to bind it, use a spoofer. There are many spoofers on HF, there will also be one

upon the purchase of your crypter.

TheWaifuHunter - August 4, 2013, 5:42 pm

I see i see Spoofers so when i buy a crypter one will come with it sorry for asking so much and if so whats the best one ?

Understalker - August 4, 2013, 5:44 pm

(Aug 4, 2013 05:42 PM)natas665 Wrote: [\[CITE\]](#) I see i see Spoofers so when i buy a crypter one will come with it sorry for asking so much and if so whats the best one ?

It is fine, and if you have a small budget go with RazorCrypt if you have a high budget, go for CryptME or DataProtector.

TheWaifuHunter - August 4, 2013, 5:55 pm

(Aug 4, 2013 05:44 PM)Understalker Wrote: [\[CITE\]](#) It is fine, and if you have a small budget go with RazorCrypt if you have a high budget, go for CryptME or DataProtector.

RazorCrypt i think i will go with that for now. I must find and buy it thank you very very much for all your help.

Understalker - August 4, 2013, 5:57 pm

Sounds good. Enjoy your ratting experience. ?

Feel free to come back to the thread if you have anymore questions.

Rayyy - August 4, 2013, 7:55 pm

Hey man..I need your help with something. I just bound a file with another file, and when I press the final file (which has both of the files bound to them, the infected one and pic that I have bound in it. When I press on the final file, it creates the 2 files again. So let's say I have the final file on my desktop (which has 2 files hidden into it), when I click on it, it creates the 2 files that are bound in it.

Here are some pics to explain it..

Before I click on the file:

After I click the file:

I obviously want it so that when I have the final file and my victim clicks on it, I have him pop up on my rat without the file executing 2 other files. I hope you understood my problem :s

The issue is you're binding it with a .jpg and not another .exe. Instead of binding it to a .jpg why not make a favicon which can be made here, favicon.cc and use the icon as your servers icon and spoof it to a .jpg? This would be an example.

[Your IMG]prettyflowersexe.jpg

Tzesi - August 5, 2013, 4:27 am

I read somewhere that because a crypter uses different algorithms and "methods" most of the time we can't connect to the victims.

How true is that?

Also, the most victims you ever had?

times558 - August 5, 2013, 4:31 am

1. Barely. If you have a good crypter it will work most of the time so no its not very true.
2. I dont know myself because the last time I used RATs was quite a while ago and I stopped now.

How easily can someone find out information on the person who ratted him.

Edit: Can slaves get 'lost'/stolen using a shared ip VPN?

Understalker - August 7, 2013, 4:06 pm

(Aug 7, 2013 03:17 PM)Tzesi Wrote: [\[CITE\]](#) How easily can someone find out information on the person who ratted him.

Edit: Can slaves get 'lost'/stolen using a shared ip VPN?
People who get ratted will not know how to backtrace the RAT, do not worry.

No they cannot unless somehow they get your no-ip pass and use the same port you're using.

Tzesi - August 7, 2013, 4:07 pm

Hmm thread is bugged, thanks for the PM Understalker.

Chills - August 7, 2013, 8:09 pm

Vouch for understalker he helped me out a ton on teamviewer and is a very nice HQ member!
Would recommend dealing with him!

Tzesi - August 7, 2013, 8:23 pm

Oh well after all these answered questions I forgot to vouch about him.

Well, here's my vouch to Understalker.

Understalker - August 7, 2013, 8:49 pm

Thank you for the kind words, offering assistance still! ?

How can I "bypass" the Google Chrome discard thing?

Understalker - August 9, 2013, 10:48 am

(Aug 9, 2013 10:45 AM)Tzesi Wrote: [\[CITE\]](#) How can I "bypass" the Google Chrome discard thing?
You cannot, it will always say that unless it is a known product like Skype for example or has tons of downloads.

Tzesi - August 9, 2013, 11:13 am

Can I use any of the other output extensions on Darkcomet like .scr ?

Understalker - August 9, 2013, 11:21 am

(Aug 9, 2013 11:13 AM)Tzesi Wrote: [\[CITE\]](#) Can I use any of the other output extensions on Darkcomet like .scr ?
No, it will have to be a .exe unless you want it to be a .jar then you will have to purchase jRAT but I personally would not recommend it.

You can also spoof the extensions.

Understalker - August 9, 2013, 11:48 am

(Aug 9, 2013 11:36 AM)Madboyamax Wrote: [\[CITE\]](#) Hi, Norton is playing havoc with DC and even thought ive disabled every option i can find, can't seem to turn the damn thing off enough to stop it blocking DC itself (not the server) from connecting. How would I set it up in a VM and still work, also as I'd imagine that would be safer than turning off my AV every time I want to rat someone.
Currently having to store my files and crypter in a truecrypt volume to stop the AV picking up and deleting them.

Is there a windows emulator that they still run under, as obviously I'd have to pay for a windows VM, and how would port forwarding work?

Many thanks

Max

Send me a PM and I will set you up with it.

hesh - August 9, 2013, 2:10 pm

Hi there.

I'm having a problem with no-ip.

I will register the no-ip host behind anonymous VPN, with the IP set as my disguised one.

I will then run DUC and select the host. After doing that, it reverts the IP to my UK IP. I have tried multiple ways to fix this. When behind the VPN, I ping my DNS and still get my personal UK IP. Not the netherlands one.

Any help?

(on join.me right now: <https://join.me/504-089-871>)

Understalker - August 9, 2013, 2:32 pm

(Aug 11, 2013 07:55 PM)Kermi Wrote: [\[CITE\]](#) So I Downloaded DUC and set up it:
<http://prntscr.com/1kq621>

And, when im going to build the server:
<http://prntscr.com/1kq6sa>

--

The portfoawrding is Good!

<http://prntscr.com/1kq74x>

Need help dont know what to do!

have you forwarded the ports manually? if so, is upnp enabled on your router?

Kermi - August 11, 2013, 8:05 pm

I did some reserach and yes UPNP is enable!

And yes to i portforwarded manually!

.44 Caliber - August 11, 2013, 8:53 pm

(Aug 11, 2013 08:05 PM)Kermi Wrote: [\[CITE\]](#) I did some reserach and yes UPNP is enable!

And yes to i portforwarded manually!

then you dont need upnp if you port forwarded it manually,

Kermi - August 11, 2013, 9:25 pm

I disabled the UpNp and same shit!

Nothing still can connect to the port!

Understalker - August 12, 2013, 12:39 am

(Aug 11, 2013 09:25 PM)Kermi Wrote: [\[CITE\]](#) I disabled the UpNp and same shit!

Nothing still can connect to the port!

Throw me your TV details, did you sign on your No-IP via the DC feature?

Kermi - August 12, 2013, 6:21 am

How do i do that? Sign noip via dc feature?

Understalker - August 12, 2013, 11:13 am

(Aug 12, 2013 06:21 AM)Kermi Wrote: [\[CITE\]](#) How do i do that? Sign noip via dc feature?

What? Go download the DUC from no-ip.com and sign on there.

Tzesi - August 13, 2013, 2:36 pm

Ad companies that won't ban you for running ads on slaves?

Understalker - August 13, 2013, 3:54 pm

(Aug 13, 2013 02:36 PM)Tzesi Wrote: [\[CITE\]](#) Ad companies that won't ban you for running ads on slaves?

I do not do any of that, but I am pretty sure you will not be banned. ?

Kermi - August 13, 2013, 4:49 pm

created another account at No-ip and stil the same cant connect the NOIP ip to the port!

Understalker - August 13, 2013, 4:55 pm

Use Darkcomet, it is free and reliable. ?

(Aug 17, 2013 04:00 PM)VerybigSkid Wrote: [\[CITE\]](#) Hello people at legion i got a realy little Question When i open remote input[immiment monitor] And i move my mouse around his screen will he notice it or not?

[as long if i dont click anything]

As long as you don't click on anything I'm sure you will be fine. There should also be an option for you to remove your mouse/keyboard control. Not sure if Imminent has it though.

Use your no-ip host, make an unencrypted stub with minimalist settings and test it on Anubis. Tell me if that works. ?

Tzesi - August 19, 2013, 5:31 am

Is the "Update Server" DC feature unstable or I just fked up?

2PacShakur96 - August 19, 2013, 5:36 am

im using darkcomet when i crypt the server and try to open it ... it says which program i want to open this file with . Just need help with this as im confused as fuck . All ports are open , test it on myself before crypting . Working fine , is it with my crypter or what ?

n3y4k0 - August 19, 2013, 5:39 am

Well the startup mode in DC is just fucked up. Any software I could use to have a nice and working startup? If you have a free working startup crypter, feel free to share.

Understalker - August 19, 2013, 9:52 am

(Aug 19, 2013 05:39 AM)n3y4k0 Wrote: [\[CITE\]](#) Well the startup mode in DC is just fucked up. Any software I could use to have a nice and working startup? If you have a free working startup crypter, feel free to share.

I cannot recommend any good free crypters, although what I can say is save up for a decent one such as RazorCrypt(\$10 per month) and buy it.

zehhacker - August 19, 2013, 10:02 am

Dear Legion,

Is there a way to use the slaves IP? So that I wont get 'blocked' from all accounts?

coolerfarmer - August 19, 2013, 10:05 am

Hey,

i bought Byte Crypter, but it doesn't really work atm -.-

I use DarkComet. I just created a server without anything (like startup, etc.) All works fine, but when i crypte the File with Byte Crypter, the server doesn't connect to the client. I don'T know why!

Anybody know which settings i have to use for DC and Byte Crypter?
Thanks

2) Why are you save it as a .rar? Save it as a .exe

Snowwy - August 20, 2013, 5:59 pm

(Aug 20, 2013 05:57 PM)Understalker Wrote: [\[CITE\]](#) 1) Sharesend

2) Why are you save it as a .rar? Save it as a .exe Alright cool and yes I did - it has no .rar although I did zip it - anyway I will try again from scratch and see how I go.

When naming the RAT and crypting it - I don't have to add .exe on the end, right? Just what I want the file name to be?

DarkClouds - August 20, 2013, 6:03 pm

Anyway to use a slave as proxy ? i've tried HTTP Proxy with Cybergate but he doesn't works

Understalker - August 20, 2013, 6:11 pm

(Aug 20, 2013 05:59 PM)TheAussie Wrote: [\[CITE\]](#) Alright cool and yes I did - it has no .rar although I did zip it - anyway I will try again from scratch and see how I go.

Yep, there is no need to add a .exe to the end, it will do it itself.

(Aug 20, 2013 06:03 PM)Terabytes™ Wrote: [\[CITE\]](#) Anyway to use a slave as proxy ? i've tried HTTP Proxy with Cybergate but he doesn't works

Yes it is possible, some RATs actually have that feature. Check out Imminent, it might actually have that feature.

DarkClouds - August 20, 2013, 6:15 pm

(Aug 20, 2013 06:11 PM)Understalker Wrote: [\[CITE\]](#) (Aug 20, 2013 06:03 PM)Terabytes™ Wrote:

You know how it working on Cybergate ?

And have you heard something about BackProxy ?

Understalker - August 20, 2013, 6:20 pm

(Aug 20, 2013 06:15 PM)Terabytes™ Wrote: [\[CITE\]](#) You know how it working on Cybergate ?

And have you heard something about BackProxy ?

Cybergate is pretty bugged so I do not recommend it.

What do you mean?

DarkClouds - August 20, 2013, 6:24 pm

(Aug 20, 2013 06:20 PM)Understalker Wrote: [\[CITE\]](#) Cybergate is pretty bugged so I do not recommend it.

What do you mean?

BackProxy is a Reverse proxy software i mean if you know sometimes about it

Snowwy - August 20, 2013, 6:25 pm

After crypting my RAT, is it possible to rename it to something different? Or would it corrupt the

RAT?

Understalker - August 20, 2013, 6:33 pm

(Aug 20, 2013 06:24 PM)Terabytes™ Wrote: [\[CITE\]](#) BackProxy is a Reverse proxy software i mean if you know sometimes about it

Yes I understand, but I will advise you to buy a RAT program that offers what you want.

vindianv - August 20, 2013, 7:09 pm

I have heard that you can put your rat in a picture. Is that possible if so, can I get a guide please? :D

Understalker - August 20, 2013, 7:21 pm

(Aug 20, 2013 07:09 PM)vindianv Wrote: [\[CITE\]](#) I have heard that you can put your rat in a picture. Is that possible if so, can I get a guide please? :D

Not exactly, but you can spoof the extension to a .jpg or .png and so forth.

vindianv - August 20, 2013, 7:27 pm

(Aug 20, 2013 07:21 PM)Understalker Wrote: [\[CITE\]](#) Not exactly, but you can spoof the extension to a .jpg or .png and so forth.

Can you elaborate on that a bit. I tried it with RazerCrypt and it still says application type is a .exe, but in the title it says for example Test.jpg Is that correct?

Snowwy - August 20, 2013, 7:31 pm

My post got lost up there! I'll post it again though!

After crypting my RAT, is it possible to rename it to something different? Or would it corrupt the RAT?

ajx3 - August 20, 2013, 7:41 pm

Hi,

I am new to all of this. With that said, I have ready through all the tutorials regarding DarkComet on this forum as well as confirming all the steps on various videos online.

My port forwarding appears to be working as intend. I actively shut off and re-enable the port on port forwarding to make sure that it is indeed working and that canyouseeme.org can see it.

No-ip DUC is running with 3 check marks.

I am running DarkComet 5.3.1. Everything is running on a VM. After the server is generated, I would a) test it on Sandboxie or b) just double click to infest the VM. In either case, it doesn't work and nothing shows up on DarkComet. If I click it on the VM, the exe will actually disappear.

Can someone suggest what I should do next?

Much appreciated.

Understalker - August 20, 2013, 7:41 pm

I would recommend not changing it, but I have never had the need to change the server name before. I would simply just recommend making a new server to avoid any issues.

You should have received a temporary slave if you set everything up correctly, do you have your no-ip host, ports forwarded, and are you using minimalist settings when testing on anubis?

ajx3 - August 20, 2013, 8:18 pm

(Aug 20, 2013 08:12 PM)Understalker Wrote: [\[CITE\]](#) You should have received a temporary slave if you set everything up correctly, do you have your no-ip host, ports forwarded, and are you using minimalist settings when testing on anubis?

I don't see a temporary slave. That should show up in DarkComet... correct?

PortForward appears to be working as intended on 1604 and DarkComet is listening to that port. No-ip DCU is running with 3 checks. The host in no-ip matches the one on the server.

I am looking on Anubis and am not sure what you mean by the minimalist setting. I pretty much followed everything from here: <https://hackforums.net/showthread.php?tid=2209495> and did not use 'Advanced Submission'.

Understalker - August 20, 2013, 8:27 pm

Sadly, no. They will be mixed with the slaves that were removed too. Although you can check your total number of slaves by going to, Darkcomet RAT > Client Settings > Manage Local DB > Users data > then click refresh data.

Snowwy - August 20, 2013, 11:28 pm

(Aug 20, 2013 11:05 PM)Understalker Wrote: [\[CITE\]](#) Sadly, no. They will be mixed with the slaves that were removed too. now what kind of things can i "bind" my rat to. Could I attach it to a picture, so when the victim opens the picture it gives them the rat?

#Martijn - August 22, 2013, 7:17 am

(Aug 22, 2013 07:09 AM)vindianv Wrote: [\[CITE\]](#) now what kind of things can i "bind" my rat to. Could I attach it to a picture, so when the victim opens the picture it gives them the rat?

Binding your file means that you add something to your exe. So if you bind a picture with your server and you run the server.exe, the server and the picture will open. If you want the .exe extension changed to .jpg, you'll need a spoofer. If you want a good free spoofer, click [Here](#) !

~Huiskesmartijn

vindianv - August 22, 2013, 7:23 am

Thanks, that last bit is what I was not figuring out. I still had it as an .exe and now I have it as a .jpg
<3 Thanks!

Disable all options when you make your server (except startup). And it needs to be pictureexe.jpg, make sure you're using the spoofer!

vindianv - August 22, 2013, 7:49 am

Should I bind with DC or RazerCrypt also I am using RazerCrypt to spoof

Still not working, I think I am going to need someone to guide me through this lol

Understalker, when you are on lemme know if you can team view me and show me how to do this correctly!

Understalker - August 22, 2013, 3:53 pm

Understalker, when you are on lemme know if you can team view me and show me how to do this correctly!

I do not recommend you binding it with a picture as it will corrupt your stub, instead just spoof the ending and and your own icon to it. It will be something like this, pictureexe.jpg as mentioned above.

dekindia - August 22, 2013, 4:40 pm

thx for your help. I'm trying to use cybergate rat using 127.0.0.1 setup but when I double click, nothing happend(I use sandbox). plz help me. again thx.

Mind telling me what settings you're using, not only that but are you using a crypter? If so, you're using minimalist settings on your DC then using the features you want on your CRYPTER correct? What site are you uploading your server on?

ananrulz - August 28, 2013, 5:47 am

Hi, I have port forwarding problems.

I am using Eset Smart Security's Firewall (which I have already turned off) and also turned off windows firewall.

When I am using Darkcomet 5.3.1 It works with 1604 port in UnPn so my darkcomet works here.

I want to test Imminent Monitor but portforwarding does not works with that how do I port forward it.

I had created firewall rules to bypass port as well as bypassing app.

but not working help me out what should I do here ?

Understalker - August 28, 2013, 6:01 am

Nice Service Man Hope it Goes well For you i know where to come if i get stuck

El_Panos - August 28, 2013, 6:17 am

Hello,

I am beginner to all this things, i have tried to setup all above things , i saw several tutorial, but i have still problems and questions.

I would like very much , if you want to answer and help me.

1. I have DarkComet, nVPN for 1 month, no-ip host.

I would like to ask how can i port forward in my nVPN for my DarkComet Rat .

I have an Philips router.

2. I have sign up in no-ip and i have create a host(...no-ip.biz).But when i go in DarkComet in no-ip tab and i write my user name , my host, my password it is not move on. (failed)What can i do to fixed that?

3. When i create my host, should i use my nVPN ip or not?

4. Any recommendations for a FUD Crypter for my DarkComet RAT?

5.Any ways to spread my Rat (FUD JDB, etc..)

That is my questions.

I hope that i will answer to me.

Best Wishes,
Panayotis

1. Your router has nothing to do with it when using a VPN. Anyway, just go to nvpn.net, click on client area and sign in with the details they send to your email. Then click on the portforwarding section and add in the port.

2. When building, enter your No-IP name into the IP/DNS tab. Leave the password as it is its just an annoyance. After that, dont use the No-IP updater in DarkComet as it doesnt work. Just download the No-IP DUC and use that (<http://www.noip.com/downloads.php?page=win>).

3. I think so

4. <https://hackforums.net/showthread.php?tid=3497985>

5. <https://hackforums.net/showthread.php?tid=3329958> and also there is others

El_Panos - August 28, 2013, 7:00 am

Thanks for your answers!

I will try the method you tell me in answer 2. .

I hope to be ok.

Thanks again,
Panayotis

thanks

I believe you're referring to a Reverse Proxy, some RAT's have that feature so you will have to find one with that specific feature.

stupidplayboy - August 28, 2013, 12:43 pm

i m using darkcomet rat
i got password of some slaves
but i can't login in their social accounts, location problem

can i get their ips with reverse sock5 ?
and how i can use their ip in my computer ?

sorry for bad english, try to understand

Understalker - August 28, 2013, 1:17 pm

Not quite understanding you 100%, but what I am trying to say is you will need a RAT that has a Reverse Proxy feature.

Jestar - August 28, 2013, 1:21 pm

Understalker, if your available to help me I would appreciate it.

Understalker - August 28, 2013, 1:34 pm

Fluffy_Raptor - September 1, 2013, 7:52 am

I had a problem with Port Forwarding and spent four days and at least 42 hours investigating and messing with it trying to figure out what was wrong.

Got on Team Viewer with Understalker and he resolved it :D.

We spent a total of 35+ minutes working on it and he was very patience with me even though I had to restart my computer and the Wi-Fi around three times.

We finally resolved it after fiddling around with it.

Great user hope to talk to him again. Can't stress enough how friendly he was.

Thanks ;D

Resolved.

That is the issue then, you need a 5.3.1F download link as after 5.3.1F the owner of DarkComet stopped working on Malicious programs and instead made DarkComet more of a "TeamViewer" type of thing.

ChanceC - September 1, 2013, 10:13 pm

I have port forwarded!

If you could help me please PM! Thanks so much
Did you test it on anubis.iseclab.org? Make sure your stub is unencrypted, if all is well, you will get a test slave.

Lines - September 11, 2013, 5:08 pm

I'm having trouble Portforwarding.. I can't seem to get my 1604 Port to connect with DarkComet 5.1.3F. I have my No-IP Account setup, along with my host. But I've had several people try to help me with this portforwading problem, and noone can.

Understalker - September 11, 2013, 5:09 pm

Are you connected to a wireless connection or your WIFI?

Is your firewall off?

Are you listening to your port?

Lines - September 11, 2013, 5:09 pm

Thanx for great thead and for helping others...

You will always need no-ip.

And yes I would recommend having the DUC open before opening your RAT.

Mutiny - September 13, 2013, 4:40 am

So my router will NOT forward my ports even though it has the section, I've disabled the router firewall and computer firewall I've reset the port to listen to on darkcomet and re-added it and still doesn't work. I've also uninstalled anti-virus and still won't forward the port..

Understalker - September 13, 2013, 8:12 pm

(Sep 13, 2013 04:40 AM)Faladodig Wrote: [\[CITE\]](#) So my router will NOT forward my ports even though it has the section, I've disabled the router firewall and computer firewall I've reset the port to listen to on darkcomet and re-added it and still doesn't work. I've also uninstalled anti-virus and still won't forward the port..

So if I may ask once more, all firewalls/AV's are disabled correct?

You're connected wirelessly, correct?

Third off, have you entered your IPV4 address when portforwarding?

haydrazs - September 13, 2013, 8:12 pm

How do i stop seeing people fap through webcam?

No but really thanks for the help in PM!

What do you mean? Kind of confused me..

~X.x.X~ - September 16, 2013, 12:24 am

i mean in DC there is option "Try to forward automatically (UpNP)".

Understalker - September 16, 2013, 5:57 pm

(Sep 16, 2013 12:24 AM)~X.x.X~ Wrote: [\[CITE\]](#) i mean in DC there is option "Try to forward automatically (UpNP)".

Instead of that.. why not just portforward manually and have a 100% success rate? ?

Mrlickinloly - September 16, 2013, 6:20 pm

I'm really looking for perhaps a guide or something to help me setup a JDB. I have bshades and have it 100% working but what I still need is:

- A FUD crypter
- To setup the JDB
- Hosting site that will allow JDBs

If you can help me with any of this or maybe there is someone with this service or guides to help me that would be great. I really don't know where to start. I have a JDB template I already have in mind for using.

Understalker - September 16, 2013, 6:22 pm

- RazorCrypt
- Buy FoxyJava
- FoxyJava :p

CCHrambo - September 16, 2013, 7:50 pm

I want to start using a RAT tool. I don't know much about RAT setups, but I want to learn. My goal is to setup a RAT that hosts about

5-10 slaves with fast fps screen viewing. I want to do it safely and 100% anonymous so I don't get caught. What RAT would you recommend? Also is it possible to do what I want to do with little to no money?

Understalker - September 16, 2013, 10:09 pm

(Sep 16, 2013 07:50 PM)CCHrambo Wrote: [\[CITE\]](#) I want to start using a RAT tool. I don't know much about RAT setups, but I want to learn. My goal is to setup a RAT that hosts about

Darkcomet / a VPN with portforwarding such as Anon's VPN (\$5/M) or NVPN (\$6/M) is your best bet.

Understalker - September 18, 2013, 7:26 pm

Still offering this service to everyone who is in need of it.

Maniaac - September 19, 2013, 12:25 pm

I will not add you on Skype, however I will help you via PM / TV. Get 10 posts then PM me.

Realing - September 19, 2013, 7:26 pm

Hello, well I got a question. I have a slave already connected to my DC, but I want to create ANOTHER FILE for the slaves to click on, so I think I have to create a new server. If I create a new server, will my old slave still connect to me?

Understalker - September 19, 2013, 7:28 pm

(Sep 19, 2013 07:26 PM)Baby Cheetoz Wrote: [\[CITE\]](#) Hello, well I got a question. I have a slave already connected to my DC, but I want to create ANOTHER FILE for the slaves to click on, so I think I have to create a new server. If I create a new server, will my old slave still connect to me?

That question was kind of confusing, however I will try to answer it in the best way possible.

If you wish to update your server on your slave, there should be an "Upload and Execute" option when you right click your slave. If this isn't what you were asking, please be more clear and specific on what you actually mean.

Realing - September 19, 2013, 7:32 pm

What I meant was I already have a slave connected to my DC, but I want to create a new .exe file

so I can spread it. If I make a new .exe or server, will my old slave still be connected to me? I hope I worded it good this time :D Imfao

Understalker - September 19, 2013, 7:33 pm

Haha, yes that is much better.

To answer your question, yes your slave will still be connected to you, you will not have to worry about that. HOWEVER, please keep in mind that you should update your slave with a new server every two days, or even daily if possible.

tnonrs - September 19, 2013, 8:01 pm

i just ran into a problem....well a couple..firewall and av are both off but my dark comet.exe keeps dissapearing, so i would just slide the one from the zipped folder back into my darkcomet folder and i would get my people back...but then my computer froze and now i can not connect to port 1604...10084 error...how do i fix this?

No, he will have to delete the server from processes. However your stub will hide itself to the place you've told it to go after being opened.

You can spoof the extension to something like, "lolhereismypictureexe.jpg"

(Sep 21, 2013 07:34 PM)Armazedon Wrote: [\[CITE\]](#) So I have set up a port with big problems, but managed to make port be open on canyouseeme.... Then I come back in 5 mins to just to check again, and BAM ? the port is no longer open!!!!

Hello brosepher.

Yes, you must listen to the port via your RAT.

If it shows it is open while you're listening to it, that is good.

My darkcomet keeps playing up and deleting itself when I try to run it. I was all okay until yesterday. I've attempted to run it in admin mode and it says 'Windows cannot access the specified device, path or file. You may not have the appropriate permissions to access the item.

Please help!

fpdalis - September 22, 2013, 6:17 am

Hello again, I build a new server again with darkcomet I bind it with a picture and spoof the extension from Picture.exe to Pictureexe.jpg. The server did connect to the client but when I restart the victim Pc the server didn't connect again.Startup is activated but the server didn't copy himself to the other folder ...

Sorry about my bad English

TheDarkComet - September 22, 2013, 7:05 am

I need help with portforwarding, and setup my RAT (I'm using DarkComet).

And I want to use a tool(Ghost Eye Worm) for the spreading but it don't seem to work so I need help with it to,

Thanks.

HACK3D - September 22, 2013, 7:12 am

Alright I've finally been able to make a RAT that is working perfectly. Now I want to know, is there's a way I can find my rat on the other guy's computer so I can make an exeption in his AV and not have

to decrypt the RAT? My RAT is setup to go in a hidden file so I dunno really what to do. (using darkcomet 5.3.1 F)

SIM-1723889 - September 22, 2013, 9:35 am

any modern rats that ignore NATs and firewalls during connection?

Gucci. - September 22, 2013, 9:38 am

What currently is the fastest evolving RAT software to use right now? What would you recommend I use for Ad Clicking from my slaves? I've used DarkComet in the past but it isn't very stable once I reach 500+ slaves. Would BlackShades be a better alternative at this point?

~X.x.X~ - September 22, 2013, 12:47 pm

Hlo again,

Can u tell me why my router keep changing my local ip i mean it was 192.168.1.2

i just turn off my pc and router and turned on again after some time and then i checked it was 192.168.1.3

what is this???

its creating problem in port forwarding.its keep doing same thing.

should i disable DHCP?

(Sep 22, 2013 04:32 AM)ExoKnight Wrote: [\[CITE\]](#) My darkcomet keeps playing up and deleting itself when I try to run it. I was all okay until yesterday. I've attempted to run it in admin mode and it says 'Windows cannot access the specified device, path or file. You may not have the appropriate permissions to access the item.

Please help!

You have some type of firewall/AV on. Make sure to remove all AV's/Firewalls.

(Sep 22, 2013 06:17 AM)fpdalis Wrote: [\[CITE\]](#) Hello again, I build a new server again with darkcomet I bind it with a picture and spoof the extension from Picture.exe to Pictureexe.jpg. The server did connect to the client but when I restart the victim Pc the server didn't connect again.Startup is activated but the server didn't copy himself to the other folder ...

Sorry about my bad English

Are you sure he just didn't turn on his PC again?

(Sep 22, 2013 07:05 AM)TheDarkComet Wrote: [\[CITE\]](#) I need help with portforwarding, and setup my RAT (I'm using DarkComet).

And I want to use a tool(Ghost Eye Worm) for the spreading but it don't seem to work so I need help with it to,

Thanks.

When you're on throw me a PM with your TV details.

(Sep 22, 2013 07:12 AM)HACK3D Wrote: [\[CITE\]](#) Alright I've finally been able to make a RAT that is working perfectly. Now I want to know, is there's a way I can find my rat on the other guy's computer so I can make an exeption in his AV and not have to decrypt the RAT? My RAT is setup to go in a hidden file so I dunno really what to do. (using darkcomet 5.3.1 F)

You will always have to update your RAT on your slave, I would recommend every 1-2 days.

(Sep 22, 2013 09:35 AM)Ninetyninenights Wrote: [\[CITE\]](#) any modern rats that ignore NATs and firewalls during connection?

What? Just get any decent rat with a crypter and you'll be fine.

(Sep 22, 2013 09:38 AM)Gucci. Wrote: [\[CITE\]](#) What currently is the fastest evolving RAT software to use right now? What would you recommend I use for Ad Clicking from my slaves? I've used DarkComet in the past but it isn't very stable once I reach 500+ slaves. Would BlackShades be a better alternative at this point?

I would recommend either jRAT or BS. It is your choice.

(Sep 22, 2013 12:47 PM)~X.x.X~ Wrote: [\[CITE\]](#) Hlo again,

should i disable DHCP?

No do not disable DHCP, just keep portforwarding everytime it changes. Portforwarding should take 2 minutes maximum.

You will need a JDB that supports .jar.

Instead of making it a .jar make it a .exe then try the JDB again.

radament - September 22, 2013, 2:55 pm

hello , i don't know if you can help in some way but...

i used DC , BS & Cybergate before and was fine , now i purchased legacylink because of his features but i can't figure if i set it well (it has few options to set btw). tried on localhost and works well.

With no-ip seems to be not connecting but i opened port 2048 on my nvpn settings , i started the server too , checked with canyouseeme and it's open , don't know why i can't get anyone to connect to me..

here's an image of it Spoiler ([Click to View](#))

thanks for any help you could give :)

Understalker - September 22, 2013, 2:58 pm

i tried to express my idea in the most detailed way in one pm:

"usually the remote access rat (host) initiates a connection with the remote control module (viewer) directly using its white ip address (eg 91.219.238.56). this feature is called "backconnect"

BUT

there is one big problem that cause some hosts being unreachable for viewer and it is called NAT. Nat is masking several grey ips under its own white one. It is integrated in every router, the most widespread way for the internet access nowadays. and if i dont have the access to the router my backconnect rat seems to be useless as i cant portforward it to a slaves host.

so im looking for a blackhat rat that establishes a connection between host and viewer via 3rd party server (eg hamachi vpn, rdp connection via MS server). Ammyy admin whitehat rat ignoring nats feature is called id-connection.

http://www.ammyy.com/img/ru/Ammyy_NAT_nastroyka_marshrutizatora.gif

I am the only one currently helping in this help desk.

However, I will be more than happy to help you via Teamviewer. ?

(Sep 25, 2013 10:55 AM)HACK3D Wrote: [\[CITE\]](#) what is the best paid rat available. I'd like it to be lifetime, though i dont think there's a lot of rats that are selling by subcriptions.
Don't bother purchasing a RAT. Get a crypter and use Darkcomet for now.

HACK3D - September 25, 2013, 12:58 pm

I have a bigger budget so I can buy my crypter and a rat so which one should I buy ?

Understalker - September 25, 2013, 1:04 pm

(Sep 25, 2013 12:58 PM)HACK3D Wrote: [\[CITE\]](#) I have a bigger budget so I can buy my crypter and a rat so which one should I buy ?

Most paid RAT's already come with a built-in crypter.

I would recommend purchasing jRAT or BShades.

HACK3D - September 25, 2013, 1:14 pm

Does this mean that I shouldn't crypt any jRat/BShades stubs ?

Understalker - September 25, 2013, 1:16 pm

(Sep 25, 2013 01:14 PM)HACK3D Wrote: [\[CITE\]](#) Does this mean that I shouldn't crypt any jRat/BShades stubs ?

For jRAT you will not need to, however I am not 100% sure about Bshades.

Look at the BShades sales thread.

_Fede - September 25, 2013, 1:20 pm

Hi,
I need tips on how to keep a slave for a long time, the slave uses Avira AV.

Thank you for your service :)

Understalker - September 25, 2013, 1:24 pm

(Sep 25, 2013 01:20 PM)_Fede Wrote: [\[CITE\]](#) Hi,
I need tips on how to keep a slave for a long time, the slave uses Avira AV.

Thank you for your service :)

Use a crypted stub and update a new stub to your slave every 1-2 days.

_Fede - September 25, 2013, 1:32 pm

Yes, I'm filling the slave with new crypted server from afternoon, is there a method to "kill" Avira AV, I don't want to remove it, just disable or put my server on the exceptions.

The problem is: I can't do these things when the user is working, can I disable the AV from the shell for example?

Shiva - September 25, 2013, 1:36 pm

Hey,
first nice thread for noobies like me :-D.
I need some help. I have my Server (DarkComet) up and crypted with CubeCrypter.
I spreaded for three weeks trough torrents, YouTube and Omegle but i only got 11 slaves ...
Are there any good tips for (auto) spreading you could give me ?
I want at least a few hundred installs ..

Thx Shiva

Understalker - September 25, 2013, 1:37 pm

No, but there are some RATs that offer this feature I believe.

(Sep 25, 2013 01:36 PM)Shiva Wrote: [\[CITE\]](#) Hey,

Auto spreading? Make a YouTube/uTorrent that interests A LOT of people.

Dæmon - September 25, 2013, 9:26 pm

Do you have a download link to Dark comet? That you wouldn't mind passing along.

(I'm currently living in Mexico and the company I hired for the internet and such says I need to call them to open a port from my modem, plus I'll be using Imminent Monitor RAT)

You cannot portforward via a modem, I'd recommend purchasing a VPN that supports portforwarding such as nVPN.

(Oct 1, 2013 06:54 PM)badlessa Wrote: [\[CITE\]](#) Can you tell me what is the best VPN (no logs, dynamic ip, portforwarding, etc) and the best crypter (FUD with updates) thx.
#s VPN is what you're looking for. I would recommend RazorCrypt as it is very cheap.
\$5/M - \$10/M
Total cost: \$15/M.

(Oct 1, 2013 06:55 PM)G0dOf4ll Wrote: [\[CITE\]](#) Is there any way to set up a free JDB? Maybe point me to a tut or tell me real quick? Thanks.

Yes it is possible, however I do not have a certain tutorial you should look at. I have found some before, just use the Search tool.

Aur3xis - October 2, 2013, 1:37 pm

(Oct 5, 2013 02:28 PM)Adept Wrote: [\[CITE\]](#) Hi i am trying to setup dark comet. I have forwarded my ports. Canyouseeme is working. When testing a server on myself I can connect when using 127.0.0.1, however not when entering my no-ip address. The server is unencrypted and with minimum settings. I have tried to bridge a vmware windowsXP connection to test the server on that but it gives me the following error. without the bridge the server does not connect on the vm either. Spoiler [\(Click to View\)](#)

Any advice much appreciated. ?

Instead of testing it on a VM, test it on Anubis please.

popdogcrush - October 5, 2013, 7:04 pm

Hi there,

I'm having a problem understanding the concept of the Java Drive-By and the Silent Java Drive-By. Could you please answer my questions:

1. Am I right that no JDB will stay FUD forever? Thus, one has to purchase something like FoxyJava to have a constant supply of FUD JDBs?

2. Am I right that the Silent JDB is so rare that it is almost impossible to obtain and those Silent JDB tutorials around here on the forum are actually not silent?

3. If I'm using jRAT, does it have more sense to use JDB? Or, can I somehow take advantage of the java nature of jRAT when infecting people? Or the fact that it is java-based is irrelevant when it comes to infecting people?

Thank you very much in advance. Look forward for your answers.

1. No you're not right.

2. It is rare, however not impossible to obtain. They're patched, well most if not all.

3. You don't need to use a JDB to spread with jRAT.

No problem.

1. You will need a FUD stub as well.
2. You cannot? ?
3. Yes you can, FoxyJava has that option.

III_Nye - October 5, 2013, 11:30 pm

Hello!

Im having problems getting my server to work. I've got my no-ip set up correctly, ports forwarded properly (did port check), and im also using legacylink. I've tried setting up the server tons of different ways and none are working. Ive uploaded them to anibus to test, and I get zero connections. Any idea whats wrong?

edit: also, i am not crypting the servers when i upload to anibus. And I am using nvpn for my port forwarding.

Understalker - October 5, 2013, 11:32 pm

Ask to test it on a friend, if you've everything setup correctly then it should be working properly.

Test it on yourself, via localhost(127.0.0.1) instead.

Could i test crypted files there ?

I have a new question. If on the crypter you tick the box to inject into process. You then would not have to put a startup option as the server would load every time the injected file loads for example explorer.exe Is that correct?

(Oct 6, 2013 04:28 PM)Understalker Wrote: [\[CITE\]](#) Turn it completely off first please. Then try to infect others again.

Ok, ill try that. If it works, should the ones I originally infected show up?

Ok, i did this. However Im still getting the same problem as before; im not showing up in legacylink (i infected myself), yet im showing up in dark comet. As well, nobody else I infected is showing up.

flylow - October 6, 2013, 6:46 pm

Hi!

I've got this problem, i've got a couple of people infected with my servers crypted with DP. But my client does not connect to the servers.

My ports are forwarded and when listening on the client Canyouseeme.org reports that the port is open.

- also checked if port forwarded on a different site using my no-ip adress instead of router ip, still works.

I've got a no-ip set up with the DUC reporting my routers IP for redirection.

Anyone got an idea what could cause this inability to connect?

Using DC 5.3.1

?Jeff ?The ?Killer - October 6, 2013, 7:26 pm

I can't seem to trust any download on hackforums, I don't know why but it's just me. What I do trust is Legion. So I'd like you to link me to a legit darkcomet rat so I could start my adventure.

Thanks for responding.

Mardig.

There are no free crypters and no lifetime crypter that goes for \$15 or less. However RazorCrypt is \$15 for 3 months so you can take a look at that.

popdogcrush - October 10, 2013, 7:10 pm

Hello,

I'm gonna try my luck again here at the helpdesk. So, my question is, can DarkComet 5.3.1f infect a Windows 8 computer? Please, give me more than just yes/no answer.

Thank you.

Understalker - October 10, 2013, 7:14 pm

thank you very much for your quick response :-)

Espio - October 10, 2013, 9:47 pm

edit- i've answered some of my questions.

Tutorial on how to use the "expert" full editor when creating exe? on darkcomet. [Answered]

ex; how to make it on startup? I did it with a crypter but it didn't work. I may have done it wrong?

not show up on task manager if possible?

also, how exactly to infect slaves with a new exe so I can use a "better" version of my exe.

ex; mass downloader and how it works. [answered by me sending them a none working exe and losing all of my installs :l derp]

pretty much I'm infecting 10-20 people a day but I only keep 5 after the day is over because they shut off their computer.

Understalker - October 11, 2013, 3:36 pm

If its on startup it will show on startup so.

You can use the UPDATE feature that nearly all RATs have.

It is because you either, 1) don't have startup enabled.

2) there av's are finding it.

(Oct 20, 2013 05:13 AM)giodark09 Wrote: [\[CITE\]](#) in DarkComet 5.3.1 if I want to update a server to another one that is Fud, I have to do right click on the user and click -> remote edit server

or open the control center (of the user) and click -> update server

what is the difference and what are the results of these two action?

Thanks

I would recommend just upload & executing your new stub instead of updating in case the stub doesn't work.

(Oct 20, 2013 05:57 AM)emregulluoglu Wrote: [\[CITE\]](#) Hi,

I bought LegacyLink few weeks ago, its a super RAT but the remote password doesnt work. Will someone help me please?

PM the owner of the product with your issue regarding the feature/

(Oct 20, 2013 10:20 AM)mardig Wrote: [\[CITE\]](#) Hello I've download darkcomet531 from [this](#) thread and I think it's not working for me. I've closed my Comodo firewall, windows defender and malware bytes, but when I open it, it says this program has been unexpectedly shutdown, windows will close the program and find a solution. Opened darkcomet.exe and that happened. Any help is appreciated. Thanks in advance.

Do you run Windows XP? I've heard several users using XP have had this issue. Nonetheless, I have a fix for it. Throw me a PM.

me through skype?

No, I do not add anyone on Skype for personal reasons. However, I will help you via PM.

MysticZealot - October 21, 2013, 7:11 pm

Hello,

I just decided to come back to the RATting scene and do something I failed to do before - running a RAT in a VM. (Used to have port forwarding issues and such through VM's).

I was wondering if anyone would be willing to help me test my server (RAT) in a sandbox/virtual machine for me just to see if I would be able to get outside connections.

At the moment it is currently not crypted - just want to see if it works first.

Thanks,

-Mystic

If it is not crypted, test it on anubis.iseclab.org

You should receive a temporary slave.

no-ip will only show up if your slaves(connected on a different WAN address) execute your RAT. You could ask your friend to test it out for you.

*OP correct me if I'm wrong

(Oct 23, 2013 03:12 AM)FrankLucas Wrote: [\[CITE\]](#) Hi is their a way I can spread on skype without skype showing the exe icon

On my phone right now but yes all you have to do is spoof the extension.

(Oct 23, 2013 04:17 AM)niethateboy Wrote: [\[CITE\]](#) hi i have a problem with darkcomet when i try to connect with my self it wont show me unless i use 127.0.0.1 but when im using my no-ip It wont show me. i've tryed on anubis and it gives me the same result my port is active firewall is off i dont have an antivirus so what is the problem?
That is how its supposed to be. When trying to infect yourself you use 127.0.0.1 otherwise you use your No-IP host.

FrankLucas - October 23, 2013, 7:11 am

I tried apooofing it.still shows exe icon

Test your stub on Anubis first. Make sure it is unencrypted.

Secondly, check if your port is open on canyouseeme.org.

Jacksons - November 3, 2013, 6:40 am

My port is not opened, says that link. But I really portforwarded it !

fpdalis - November 3, 2013, 8:49 am

Is there a possibility to install a DarkComet server with a rootkit function???

Crysiz - November 3, 2013, 8:52 am

(Jul 17, 2013 07:35 PM)Understalker Wrote: [\[CITE\]](#) Switch to your localhost, then run it on yourself.

Sorry but why should he switch to his loop back address? Seems totally useless to me since it will work almost 99.9% of the times, basically when you want to test a RAT it's mostly because you want to check firewalls and port forwarding.

(Nov 2, 2013 11:46 AM)Understalker Wrote: [\[CITE\]](#) You will need to buy a crypter unless you have coding experience. Sorry to say.

There are other methods to crypt a file.

(Oct 16, 2013 05:29 PM)Understalker Wrote: [\[CITE\]](#) You can use private or shared, doesn't matter. That's not quite true, a shared IP can cause problems if someone else is portforwarding the same port.

Private is the way to go.

Sorry but, I'm sure you're trying to help people but you don't seem to have enough knowledge of this area to actually help people, I've seen a lot of posts in this thread that's actually wrong and can cause problems for the people who ask the questions.

(Nov 3, 2013 09:49 AM)fpdalis Wrote: [\[CITE\]](#) Is there a possibility to install a DarkComet server with a rootkit function???

In version 4 this was added:

- new rootkit function added in edit server (server shield) it hides the file from explorer even if show hidden files is on it will be also hidden from DIR command of MSDOS

It sucks.

(Nov 3, 2013 07:40 AM)jack023 Wrote: [\[CITE\]](#) My port is not opened, says that link. But I really portforwarded it !

It might be your firewall that's blocking it, go to start and write "wf.msc" without the quotes of course. Create an inbound rule for the port you've opened.

This won't affect anything if you've your firewall turned off, but worth giving it a shot though, and also programs/websites that detect open ports aren't always 100% reliable.

You can always just make a test version of your server and run it in a sandbox or a virtual machine to check if it works.

Understalker - November 3, 2013, 11:13 am

(Nov 3, 2013 09:52 AM)Crysiz Wrote: [\[CITE\]](#) Sorry but why should he switch to his loop back address? Seems totally useless to me since it will work almost 99.9% of the times, basically when you want to test a RAT it's mostly because you wan't to check firewalls and port forwarding.

"Yes using a shared VPN may cause problems due to the ports, but why not just pick a port thats not common? The chances of you picking the same port as the other person is very slim. ? "

If you even knew how many that's on the same IP.

"He said it was working with the localhost so why not keep it like that?" Because obviously he can't infect others if he is using 127.0.0.1 in his server.

"That feature doesn't work properly I believe. It is horrible."

Yes and I said that aswell.

"You can make a test version of your server, but why not just upload it to anubis?"

He could do that aswell, never told him not to.

"He can learn, however I do not believe he is looking to waste his time on it."

Waste his time on saving money?

And also, if someone isn't willing to learn why do you think they'd ask?

"I don't care about reputation/ub3r/l33t on this forums. I'm not basing it off that. I'm basing it off the fact you think you know a lot when all you're doing is expanding on my answers. ?"

I'm actually correcting your answers. And also, by expanding your answers I'm pretty sure everyone can agree on that it's not showing anyone that you're better than me, pretty much reversed though.

"Sure, you want a challenge? Throw me a PM. "

I really think that you've already noticed that I'm better than you, and if you really want to try to prove the opposite, why don't you throw me a PM.

And please, try again.

Understalker - November 3, 2013, 1:03 pm

If you want to crypt your server do the following:

- 1) Create a server using minimalist settings.
- 2) Using your crypter, check the features that you'd like then click Crypt or w/e the name is on your Crypter.

There you go.

Have you portforwarded your port/listened to it on Darkcomet?

If so, go to canyouseeme.org to see if your port has successfully portforwarded.

Once you're done with that, please come back to the thread with your answer.

Chopped - November 10, 2013, 1:55 am

Hey , I need help with port forwarding darkcomet rat

It is not working when I go on the open port check tool it says port 1604 is closed . I went on teamviewer with a guy he could not get it either , I have a Technicolor TG587n v3 , this is what it looks like when i'm adding the ports <https://gyazo.com/cf5dc064b6d4191754fc314684b73677>

Get RazorCrypt and use Darkcomet.

CryptorMods - November 10, 2013, 3:24 pm

How do I make it FUD? I always have a problem with this. Also free would be amazing.

Understalker - November 10, 2013, 4:27 pm

(Nov 10, 2013 04:24 PM)CryptorMods Wrote: [\[CITE\]](#) How do I make it FUD? I always have a problem with this. Also free would be amazing.

Purchase RazorCrypt and crypt your stub, make sure you're using minimalist settings.

However, it will cost you around \$10.

darkgyarados - November 10, 2013, 5:59 pm

Is there anyway to run a RAT server on a free VPS? Also what is a HTML Rat?

Understalker - November 10, 2013, 7:03 pm

(Nov 10, 2013 06:59 PM)darkgyarados Wrote: [\[CITE\]](#) Is there anyway to run a RAT server on a free VPS? Also what is a HTML Rat?

It's possible.

A HTTP Rat is a web-based RAT. It also does not require portforwarding.

benison321 - November 10, 2013, 7:57 pm

Thanks

Well how it works is that their AV won't detect your server as a virus if it is FUD.

Kubaa - November 16, 2013, 8:40 pm

Hey,

I am using DARKCOMET and EVER anti virus is turned off

I AM portforwarding correctly (I checked)

The file runs but I get no victims?

I ran it through Anubis and got 1 connection for like 30 seconds but then it went away...

:/ Help please.

hackgod1017 - November 16, 2013, 8:42 pm

This is relating to RATING. But i know that there are spoof extensions to change the extension. Is there a way to change/fake the properties of the .exe so if they look at the spoof extension changed stub.mov it will have the properties of a video as well?

ClaudineMar - November 17, 2013, 11:31 am

Answered above.

shade917 - November 18, 2013, 2:37 pm

I made a thread asking for help but I'll just ask here as well.

I want to create a demo of DarkComet working on virtual machines. The thing is, I don't know how to set that up.

As in I have a Windows 7 VM running DarkComet and I have the stub installed on another Windows 7 VM right now. I am not even getting anything in my DarkComet Client saying that the VM is infected. I set my VM's networking to internal and I don't have no-ip setup but I have the network setting in the DarkComet Client IP/DNS set for 10.0.1.1 and the port is 1604 by default. I can ping both VMs just fine. There is no router or the internet that I am connected to.

VM1 (with darkcomet) IP: 10.0.1.1

VM2 (the victim) IP: 10.0.1.2

Am I missing something or am I doing something wrong here?

Understalker - November 18, 2013, 2:40 pm

To the first comment, test your server on Anubis instead of a VM.

No-IP is your host, that is why it is important.

You need internet access in order to RAT your victim. RAT's aren't an offline type thing lol.

BITDurg1 - November 19, 2013, 3:11 pm

Ive tried to set up Dark Comet and have ratted myself using 127.0.0.1. But I am not sure whether I have forwarded the ports properly. Can you help me out through team viewer and skype? Iam using Windows XP on vm ware and a dlink dsl 2750U router.

shiro07 - November 19, 2013, 4:01 pm

So, i am new to ratting, and this is the first time for me asking something and do believe me i have looked for a solution that i couldn't find.

Till now i was able to get 30+ victims infected with my Darkcomet server, although about 5 of them only are regulars Pinch , the others are all gone, even though some of them didn't even have antiviruses. i'm also using another rat called njrat and was able to infect some of the Darkcomet victims before they disappear, they are still showing in my njrat client but not the Darkcomet, and the njrat's server is quite detectable so i couldn't transfer all the victims to njrat

Also my internet connection is quite shitty, i'm using port 1177 for darkcomet and 1178 for njrat, also i'm using a stupid method through delphi to crypt the Darkcomet server but it's quite effective, maybe this encryption is why i'm losing victims, i don't know, people download the server directly without any kind of binding, and finally the server is compressed with a program called ASpack.

Any suggestions to what might help me are very appreciated, Thank you

Darkcomet is unstable, ?.

Just transfer the slaves over to your DC client again.

Keep in mind, you should update your server onto your slaves every one to two days.

ghost of christmas past - November 26, 2013, 2:40 pm

Hi,

While trying to establish the (TCP) 3-way handshake, in my malware, the connection is then killed.

Host A = botnet control and command server.

Host B = victim running malware.

Host A > TCP/SYN to Host B = sent.

Host B > TCP/SYN-ACK to Host A = yep, sent.

Host A > TCP/SYN-ACK w/ data = no response from Host B.

Aka, connection times out at data transfer; so, the handshake is more like a high-five.

Understalker - November 26, 2013, 2:41 pm

(Nov 26, 2013 03:43 PM)ghost of christmas past Wrote: [\[CITE\]](#) With all victims I try.

It couldn't be due to AV, as the connection starts.

Something else could be blocking the connection. Throw me a PM.

(Nov 26, 2013 03:46 PM)Jalato Wrote: [\[CITE\]](#) What happen if it said cant see your service? that means if i portfoward my rat wont work??

Depends, are you using a VPN?

Also, are you listening to the port on Darkcomet?

Jalato - November 26, 2013, 2:50 pm

Depends, are you using a VPN?

Also, are you listening to the port on Darkcomet?

[/quote]

i dont use vpn and i just got a new router and now it doesnt allow me to portforward stuff and i tried the port for DC.

Note:

my old router allowed me to do this stuff but my new doesnt allow me anymore

Could you help me out on TeamViewer?

this what it said when i test the port : Error: I could not see your service on *9.*5*.*.1*5(Hiding My Ip) on port (1604)

add my skype : Developed.

(Only if you wanna help me out)

Still offering assistance to those who are in need of it.

TooMuchBursty - November 27, 2013, 9:55 pm

If you infect someone on your internet using 127.0.0.1, what happens when he leaves your house?

Understalker - November 27, 2013, 10:31 pm

(Nov 27, 2013 10:55 PM)TooMuchBursty Wrote: [\[CITE\]](#) If you infect someone on your internet using 127.0.0.1, what happens when he leaves your house?

Are you infecting yourself with DC using localhost and asking that? If so, you will still be infected. However if it is someone else then no.

trucity - November 27, 2013, 10:56 pm

Hey Understalker,

I'm trying to infect a specific person that isn't just going to open a .exe file. I'm at the point where my rat looks like "testimgsrc.jpg" and it's FUD (after encryption). But when I zip/rar the file it goes about 40/46.

I want to send the files via e-mail and I think the best way is to send them zipped with a collection of real photos.

Is it my encryption? Or does this method not viable?

Thankyou

Understalker - November 27, 2013, 10:57 pm

Correct, use your No-IP host and you should be fine.

trucity - November 27, 2013, 11:02 pm

(Nov 27, 2013 11:57 PM)Understalker Wrote: [\[CITE\]](#) You didn't spoof it correctly. Have you tried it on yourself?

(infecting yourself)

Works fine in sandbox (without AV) and the server it's is FUD and gained a few slaves.

I'll try sending a test gmail e-mail to see what it picks up. Will also try a different encryption software.

I spoofed the file manually using the windows character map method.

Understalker - November 27, 2013, 11:03 pm

The spoofing method is fucking with its detection rate.

What crypter are you using?

trucity - November 27, 2013, 11:07 pm

Using DataScrambler.

Seems weird that after spoofing the server is still FUD. But zipping it changes that.

Is it spoofing in general, or just that manual method?

Understalker - November 27, 2013, 11:11 pm

Not today, helped too many in TV today and have other things to do.

However, it is not used because it is a similar concept to Teamviewer.

5.3.1F is used for malicious purposes.

fierypk - November 30, 2013, 11:44 pm

If I plan to crypt my stub, when creating the stub what settings do i not include? Like I read that you should not use start up on your stub if you plan to crypt it and instead you should use start up on the

crypted stub

Understalker - November 30, 2013, 11:46 pm

Every setting you want on your server, you do it on your crypter, not on the RAT itself.

Stoned AF - December 1, 2013, 1:42 am

Does Plasma RAT need to be crypted? I ran a scan and it came 3/33. Also, is there any way to bind a RAT executable into like a regular PDF file so that when the victim opens the PDF, the PDF will still normally show up but they will also be infected with the executable?

Understalker - December 1, 2013, 1:45 am

(Dec 1, 2013 02:42 AM)Hammered Wrote: [\[CITE\]](#) Does Plasma RAT need to be crypted? I ran a scan and it came 3/33. Yes it does need to be crypted.

You can do that, I tend to have issues binding a .exe to a .pdf though. However, others such as Business has mentioned that it worked for them so might as well try it.

Stoned AF - December 1, 2013, 1:47 am

What crypter supports Plasma RAT and is good/decent pricing? And what if it isn't crypted? Does it risk just deleting the files from the victim's PC if it's picked up by their antivirus program (the 3 that detected it) ?

Understalker - December 1, 2013, 1:49 am

(Dec 1, 2013 02:47 AM)Hammered Wrote: [\[CITE\]](#) What crypter supports Plasma RAT and is good/decent pricing? And what if it isn't crypted? Does it risk just deleting the files from the victim's PC if it's picked up by their antivirus program (the 3 that detected it) ?

I heard ByteCrypter works for it. KFCWatermelon has mentioned that it should be compatible with most crypters if I read what he said last correctly.

If it isn't crypted then it will be detected by the AV's that detected it when you ran the scan and delete the file thus not letting it infect the victim.

trucity - December 1, 2013, 1:58 am

Sprudel - December 1, 2013, 6:43 am

I also have several questions. I read some of your replies and they 're very helpful.

I already spoke to some guys and got different answers no idea whats 100% correct.

Question 1:

When i crypt my server with a fud crypter and the victim's AV shows no detection and he executes the infected file.

The victim do not delete the file (which he already executed) and he let it saved at the desktop.

After 5 days the infected file is not FUD any more and the victim's AV detects it.

a) What happen with the infected file what the victim still got on his desktop?

b) What happen with the executed file (server?) which is in his startup?

Question 2:

When i got a crypter and want to update my server that it stays FUD. Do I have to do it every 5+- days? Do i have to do it manuel with every victim I have? Or is the update automatically (i dont need to be online) ?

Question 3:

When I ask someone to crypt my server and bind it for example with a .png or .mp3 file:

The file contains 2 files:

-Server.exe
-picture.png or music.mp3

= Total 2 processes

In case he binds his server as well to the file without my knowledge. The file should contain than 3 files:

-Server1.exe (my server)
-picture.png or music.mp3
-Server2.exe (his server)

= Total 3 processes

Am I able to check that out easily how many files are bindet to the output?
I think it should be possible to check

a) On the count of processes opened with 1 file via sandboxie / taskmanager?
b) On the file size. For example the Server1.exe (my server) has a size of 500kb. The size of the picture.png i give him the size is 1.000kb so the output file should be 1.500kb

In case of the crypting service bind server2.exe (his server) size=300kb to the file or maybe a keylogger (i dont know the size of keyloggers maybe 50kb?) there should be a output of 1.800kb

Is this correct what I write?

I would appreciate your answers to my questions. Thanks in advance.

I think it should be possible to check

a) On the count of processes opened with 1 file via sandboxie / taskmanager?

b) On the file size. For example the Server1.exe (my server) has a size of 500kb. The size of the picture.png i give him the size is 1.000kb so the output file should be 1.500kb

In case of the crypting service bind server2.exe (his server) size=300kb to the file or maybe a keylogger (i dont know the size of keyloggers maybe 50kb?) there should be a output of 1.800kb

Is this correct what I write?

I would appreciate your answers to my questions. Thanks in advance.

Question 1)

a) What happen with the infected file what the victim still got on his desktop?
The file gets reported as infected and is removed.

b) What happen with the executed file (server?) which is in his startup?
Same as above.

Question 2)

Code When i got a crypter and want to update my server that it stays FUD. Do I have to do it every 5+- days? Do i have to do it manuel with every victim I have? Or is the update automatically (i dont need to be online) ?

I would recommend updating your server every 1-2 days. And you can upload and execute on multiple victims depending on which RAT you're using.

Question 3)

You confused me on the 3rd question. If you're asking if you can check if something is backdoored, that would be a yes.

Sprudel - December 1, 2013, 9:39 am

Oh so if server is detected by AV the victim is gone if i see this right. Thats really time intense than if you need update the server manual every 2 days. If you forget you lose all victim's.

WOW

About my 3rd question i may wrote it too complicated.

Easy said i want to know if i can find out when i ask someone to crypt my server and he binds his server too which i dont want.

And if the answer is yes how can i find that out?

And about if a file is backdoored would be cool if you also can describe how its possible to check.

Thanks for your answers so far.

Understalker - December 1, 2013, 10:03 am

Not all, in fact some of your slaves wont have AV's to begin with. ?

You'll be just fine, just update it every 2-3 days and you're set.

Tbh, you can't really find out if another thing is binded too it(you can but wont explain here) but you can figure out if it's backdoored more easily.

Throw me a PM and I'll help you the best I can with further questions.

Stoned AF - December 1, 2013, 12:27 pm

Forgot to thank you for your help Understalker, I really appreciate it my friend!

Hey,

Can you help me port-forward & get the DNS? I signed up @ no-ip.org but I don't know how to get the DNS address to input into Plasma RAT.

I also don't know how to port-forward because I am living in an apartment where the internet is shared and don't have access to the router or anything. Hope you can help again man.

Understalker - December 2, 2013, 3:12 am

And yes, their speed is decent.

(Dec 4, 2013 08:27 PM)PyramidXI Wrote: [\[CITE\]](#) Hello. I am using LegacyLink and using verizon with an Actiontec MI424W Rev.E and my ports won't portforward, maybe help can be within teamviewer?

On my phone at the moment.. is that even a router?

Snowwy - December 5, 2013, 4:27 am

Thanks for your help, once again, you're awesome.

Sprudel - December 5, 2013, 7:50 am

is it possible to avoid no-ip ?

i mean, are there also similar services like that? Or another way i can do to not do it with no-ip ?

Understalker - December 5, 2013, 8:30 am

(Dec 5, 2013 08:50 AM)Sprudel Wrote: [\[CITE\]](#) is it possible to avoid no-ip ?

i mean, are there also similar services like that? Or another way i can do to not do it with no-ip ? Yes it is possible. No-IP is just a host.

So you can use other things.

Sprudel - December 5, 2013, 8:33 am

can you maybe explain what other things are possible to use (not home connection)?

Understalker - December 5, 2013, 8:35 am

(Dec 5, 2013 09:33 AM)Sprudel Wrote: [\[CITE\]](#) can you maybe explain what other things are possible to use (not home connection)?

If you have a static IP(home connection) you can use your IP.

Otherwise I can set it up for you when I am home, throw me a PM.

Sprudel - December 5, 2013, 1:12 pm

oh yeah thats why i wrote "(not home connection)" since this is very unsecure.

i just was curious if there are similar services like no-ip (who dont work that close with agency).

Or if you can use a victim for example to make a no-ip service through the victim's IP adress.

Understalker - December 5, 2013, 1:19 pm

(Dec 5, 2013 02:12 PM)Sprudel Wrote: [\[CITE\]](#) oh yeah thats why i wrote "(not home connection)" since this is very unsecure.

Is there a way to rat an android device? I ask this because I know there is antivirus for tablets.

Understalker - December 5, 2013, 5:53 pm

(Dec 5, 2013 06:31 PM)NickChan Wrote: [\[CITE\]](#) Is there a way to rat an android device? I ask this because I know there is antivirus for tablets.

Indeed.

It is called "AndroRAT".

However, it isn't so stable.

Grounded - December 5, 2013, 6:55 pm

What's the best way to getting started with RATs but I'm at an university's internet so I can't portforward. Any suggestions?

Understalker - December 5, 2013, 7:02 pm

(Dec 5, 2013 07:55 PM)Grounded Wrote: [\[CITE\]](#) What's the best way to getting started with RATs but I'm at an university's internet so I can't portforward. Any suggestions?

Get a VPN that supports portforwarding and you're set.

attenister - December 5, 2013, 7:41 pm

Well, firstly I would thank your attention for this tread. I've never seen such almost live help-desk at HF before!

My question is straight and simple, and you may have answered it many times, but indeed... Consider if I have a RAT server generated using any of those free builders available around the forum. Of course, it will be flagged by the dumbest antivirus. What I need to know is if I use one of

those (paid) crypters and send the whole thing to my target, will it blind the RAT from antivirus?

Understalker - December 5, 2013, 7:44 pm

(Dec 5, 2013 08:41 PM)attenister Wrote: [\[CITE\]](#) Well, firstly I would thank your attention for this tread. I've never seen such almost live help-desk at HF before!

Darkcomet.

Never used it.

Darkcomet has tons of features. There are jhst a few that don't work.

Darkcomet isn't very stable, so it cannot necessarily connect to many slaves. (E.g 2000)

Understalker - December 10, 2013, 12:03 pm

Still offering help to those who are in need of it.

Currently the largest RAT help desk on HF. ?

Understalker - December 12, 2013, 12:54 pm

Available to help people with issues via TeamViewer right now if needed.

Aseptic - December 13, 2013, 12:06 pm

Currently I own Bshades R.A.T. but like everyone here knows they are offline for a while already.

I plan to move on some other R.A.T. currently I'm broke so I looking for free one. I don't need some R.A.T. with cool features because I plan to use it for LTC mining. So I need some stable shit for start :)

later I will buy some paid. Which free R.A.T. you would suggest me for this propouse?

Understalker - December 13, 2013, 12:07 pm

Use Darkcomet 5.3.1F and you should be set. However it isn't all that 'stable'.

Aseptic - December 13, 2013, 12:33 pm

Do you have time to help me with portforward via teamviewer? I got stucked on step 1.3 I folow this tut:

<https://hackforums.net/showthread.php?tid=3633110>

Are you connected wirelessly?

Is your firewall off?

Are you listening to your port?

Use your default gateway to get to your router page.

Aseptic - December 13, 2013, 12:35 pm

I have problem with this "Allowing Port through Firewall - Portforwarding Section 1.3" I just don't know how to do it in firewall.. I use stupid windows 8 and I'm not connected wirelessly.

Understalker - December 13, 2013, 12:35 pm

Just turn off firewall completely. Don't keep it on.

Aseptic - December 13, 2013, 12:47 pm

When I make darkcomet server in IP/DNS I should type my IPv4 or my current ip adress or what? :/

Understalker - December 13, 2013, 12:48 pm

(Dec 13, 2013 01:47 PM)Aseptic Wrote: [\[CITE\]](#) When I make darkcomet server in IP/DNS I should type my IPv4 or my current ip adress or what? :/

No, enter your No-IP host.

For example, Aseptic.no-ip.biz

Aseptic - December 13, 2013, 1:00 pm

Nice. I just tested server and it works :) thanks! one small question, is there any way to remove some infos about my slaves, like computer name, ping and that kind of things?

Understalker - December 13, 2013, 1:03 pm

(Dec 13, 2013 02:00 PM)Aseptic Wrote: [\[CITE\]](#) Nice. I just tested server and it works :) thanks! one small question, is there any way to remove some infos about my slaves, like computer name, ping and that kind of things?

What do you mean by remove if I may ask?

XxViRuSMoDzxX - December 13, 2013, 2:27 pm

Rat:Darkcomet

problems:Slaves not connecting

Hey, i am currently using DC as stated above and i am having problems getting slaves to connect. I have my server setup properly and when i test it out with anubis it gets detected, it also detect my computer, but when i give my server o other computers which is crypted using FileGuardian I dont see any of these connections. I am using My No-Ip, and ports are forwarded properly. would appreciate if u check if everything is setup correctly via team viewer. PM for Info please

Understalker - December 13, 2013, 2:39 pm

FileGuardian is corrupting your server then.

Make a DC server using minimalist settings, then use the settings you want on your crypter.

XxViRuSMoDzxX - December 13, 2013, 2:40 pm

(Dec 13, 2013 03:39 PM)Understalker Wrote: [\[CITE\]](#) FileGuardian is corrupting your server then.

this question might have already been asked but what in your guys opinion is the best spreading method :)

Understalker - December 13, 2013, 3:53 pm

(Dec 13, 2013 04:39 PM)Skwillex Wrote: [\[CITE\]](#) How would I go about using sandboxie? I already got it installed.

Right click your stub and click "Run Sandboxied".

(Dec 13, 2013 04:42 PM)Preditor Wrote: [\[CITE\]](#) this question might have already been asked but what in your guys opinion is the best spreading method :)

In my opinion, YouTube spreading is the best way.

blizz3010 - December 14, 2013, 9:25 am

I am currently having troubles with using my RAT. I am currently using Dark Comet. I setup the no-ip site and cannot get it to show up in the user list when i make the stub. I have put port forwarding into my router. However, when I change the stub to localhost I can see the stub in Dark Comet. Any ideas?

overdead - December 14, 2013, 9:36 am

Hey guys I have tried to make a JDB and still am, but I think I need to get a better understanding of them first. The main thing is that people keep saying their JDB is FUD... What component of the JDB is FUD? The jar? Where do I get the jar file if thats the case?

Tell me if I am making my JDB wrong please:

I got a free domain and hoster, I saved the HTML index of the runescape webclient, and I edited the code; <https://gyazo.com/79d028c72388a5255a1670607d03d652>

Now I am going to encrypt the html with iwebtool, save it, then upload it to my website via ftp file manager.

Is this correct? Thanks

Understalker - December 14, 2013, 10:16 am

Some people have issues RATting themselves via No-IP host. If it works via 127.0.0.1 it will work when you infect others with No-IP.

(Dec 14, 2013 10:36 AM)overdead Wrote: [\[CITE\]](#) Hey guys I have tried to make a JDB and still am, but I think I need to get a better understanding of them first. You need to have Darkcomet running while this is going on. Tell me if you get a temporary slave. Re-run it on anubis.

Also delete that anubis link as people can get your IP from there along with your No-IP host.

blizz3010 - December 14, 2013, 11:58 pm

Ok, Im redid it and waiting for the results. Ill tell you when its done. I'll email you the link? is that better cause i don't know how quick youll be on to check the results if its done right.

--

Ok. that worked quick. Yep I got a new user. So, that means its working properly correct?

also can you take the link out of your quote?

If it worked on one person, it will work on the second person.

Samnmamad - December 17, 2013, 8:18 am

hey do you know if the new version of njrat works with datascrambler anyone ?? tested and confirm working ?

Regulus - December 17, 2013, 11:17 am

Anyone might know what this problem is? I have tried to setup jRAT a few times now but there's a problem. When i'm adding a "Socket" and so on there are tons of errors popping up saying "SocketTimeoutException" or something.

I'm portforwarded and my Firewall is off.

Picture: Spoiler ([Click to View](#))

Piodre - December 17, 2013, 11:25 am

General Category Regarding Your Problem (RAT, Port-Forwarding, ETC):

If i click on my own surver i am getting myself as a client in my tool but if i send it to my friend to test it i dont get him as a client? he had antivir of and firewall of

If Problem Is Regarding A RAT, Which RAT?: Darkcomet 5.3

How Can We Contact You? (Skype, Jabber, HF): Skype

Anything Else?: I am using proxVPN to portforward and made a no-ip host.

Thanks in advance

Understalker - December 17, 2013, 11:32 am

woooow fantastic verry nice bro ;)

thanks

GeorgeSmith - December 20, 2013, 4:30 pm

Could you bind a RAT to a .pdf or .doc file and still have the file function normally? And how detectable would it be?

Specifically, would windows have a pop up asking whether the user would like to run an executable when the file is opened? And would most common antivirus software be able to see the file is not behaving the way you would expect a .doc/.pdf to function?

Understalker - December 20, 2013, 9:57 pm

Yes, it is very possible. However, I'd much rather you just spoof the extension to avoid errors. If you want it to be FUD you'd want to buy a PDF exploit.

Space Turtle - December 20, 2013, 10:08 pm

UserUS - December 28, 2013, 10:58 am

I have 2 windows 8 machines on my wireless LAN.

The client I wish to administer (IP 192.168.0.100)

and the server I wish to admin the client from (IP 192.168.0.50)

I've tried building the stub using both localhost (127.0.0.1:23) and the client IP (192.168.0.100:23) and if I run DC admin tool on the client PC I can see it in the user list with either IP setup.

However, the client doesn't show up in the user list of the DC admin tool of my admin PC (IP 192.168.0.50).

I've setup the listen port in the "socket/net" tab to port 23 but still no luck. What am I doing wrong?

Windows defender and firewall are disabled on both systems

Ideally I'd like DC to only be accessible via the LAN (no traffic passing to the internet).

Thanks in advance.

Vampiresa a - December 28, 2013, 2:22 pm

I Contacted you Via PM With a request for a crypt

Understalker - December 28, 2013, 4:06 pm

Hulk Inc - December 29, 2013, 5:58 am

I have no problem setting a rat up and forwarding the ports but i don't see the point in trying to infect someone unless the server is fud? but i have no idea were to start with cryptology and i'm skint at the moment to purchase a crypter, and it's going to be just as hard to find someone that will do it for free so i'd rather learn how to do it myself?

Understalker - December 29, 2013, 6:06 am

Learn to create one yourself? It will take a while..

Regardless, start off by learning a coding language, one such as C#.

Hulk Inc - December 29, 2013, 6:13 am

Could you crypt one for me or you another that won't do it for free i understand why like.

Understalker - December 29, 2013, 6:14 am

I would be able to do it for free, use minimalist settings on Darkcomet.

One crypt per user.

Hulk Inc - December 29, 2013, 6:51 am

what do you require me to do then upload the server to somewhere for you?

Understalker - December 29, 2013, 6:52 am

UserUS - December 29, 2013, 9:48 am

I figured it out and I feel stupid. I'm not sure why but the various guides I read said to use localhost when setting this up for use over a LAN. This didn't work for me. Logically, it seemed like the IP address I should be entering into network setting field when building the stub should be the IP where I want the client traffic to go to. I finally tried this and it worked. In summary:

I have 2 windows 8 machines on my wireless LAN.

The client I wish to administer (IP 192.168.0.100)

and the server I wish to admin the client from (IP 192.168.0.50)

I built the stub using the IP of the PC I want to administer the client from (192.168.0.50) so the executable is running on the .100 PC but is sending the traffic to the .50 PC.

Thanks

Froast - January 1, 2014, 3:44 am

i have router access

but i can't forward my port

can you help me on team viewer??

cherty759 - January 1, 2014, 7:11 am

i have fowarded port 1604 and www.canyouseeme.org says that it is open.

My DUC client is successfully set up and my no-ip info/port number are in my server settings.

when i upload my unencrypted server to anibus or test it out on another laptop (av/firewalls disabled) i get no slaves.

I do get myself as a slave when i use 127.0.0.1 but get nothing when i use my no-ip info in the server setup.

Can anyone help me?

Understalker - January 1, 2014, 6:34 pm

I will answer all questions in a few hours.

Free crypting service will also begin again. ?

Download No-IP and use that as your DNS/IP.

Portforward on your router, turn off your firewall, and listen to the port on Darkcomet.

MrPickles123 - January 3, 2014, 5:13 pm

Hey guys, hopefully you will be able to help me.

So my problem is that when I try to run my server via sandboxie nothing comes up on my darkcomet so I do not know if it is working.

-I am using No-IP and did use it while creating my darkcomet server.

- My firewall is off.

- I did portforward, I am listening to the port on Darkcomet, and did check to see if I portforwarded it correctly (I did)

I cant seem to find out what I am doing wrong....can anyone help me?

Understalker - January 3, 2014, 5:29 pm

Check out RazorCrypt or DataProtector.

SIM-1160431 - January 11, 2014, 11:25 am

Hi guys.

My problem : (using DC5.3)

When i build my server with the Local IP (127.0.0.1) it works perfectly when i run myself the server, i see my computer on the slaves list

When i build my server with the LAN IP (192.168.1.1x) it works perfectly i see my computer on the slaves list

BUT

When i build with my Wan IP (90.xxx.xxx.xxx.) OR my-host.no-ip.biz it doesnt work, i cant see my computer in the slaves list ! And i dont understand why ...

My portforward seems ok with canyouseeme.org : Success: I can see your service on 90.xx.xx.xx on port (1604) Your ISP is not blocking port 1604.

No AV and no FW.

So please, someone have an idea to fix my problem ?

(Sorry for my english i'm french)

Linc0ln - January 11, 2014, 11:40 am

mistake. What do you think?

I've heard great things about it. However I have also heard some rough things about it.

However, if you're in need of a crypter badly and that is your only choice, go for it.

SIM-1160431 - January 11, 2014, 12:01 pm

Ok thanks and if i test it in another computer but connect to the same router it will work ? (with WAN IP and my No-ip ?)

I cant connect to Anubis, seems down, but what's the utility of Anubis ?

Linc0ln - January 11, 2014, 12:02 pm

Hmmm ok, but you can tell me if any crypter can bypass it for 100%?

miles2k6 - January 11, 2014, 12:24 pm

No problem.

In order for the port to be open, you need to have something listening to it.

That is where Darkcomet comes to play.

Linc0ln - January 11, 2014, 12:58 pm

So you can PM where I can get one good crypter?

NaD™ - January 11, 2014, 5:51 pm

Thanks

It could be that your crypter had become detected overtime.

Also could be that Darkcomet is an unstable RAT. ?.

haydrazs - January 17, 2014, 3:40 pm

Buy a VPN that supports portforwarding.

Understalker - February 5, 2014, 9:29 pm

I'd recommend anyone who is looking for a new RAT to check out my signature.

In the mean time, does anyone need help?

Understalker - February 11, 2014, 6:24 pm

<https://hackforums.net/showthread.php?tid=4054919>

PlagueRAT has been released.

SIM-1029685 - February 11, 2014, 9:44 pm

Hey, if I am using DarkComet 5.3.1F and I am going to crypt it I should use on the Server Module the Minimalist "Quick" or Full Editor "Expert".

Any VPN that allows port forward? Not BlackShades, I bought it but it didnt work, it just wouldn't connect.

Also, when adding the port to my gateway, what is the LAN Port? 1604?

Thanks, -Anco-

herbietheman - February 11, 2014, 10:34 pm

What RAT are you using:Dark Comet

Specific features:Doesnt really have specific features i disabled startup.

Any other requests when crypting:N/A

Icon:No need or something you may think of

xVulnerable - February 11, 2014, 10:47 pm

The OP is banned can't you tell? ???

Relanium - February 12, 2014, 8:51 pm

does anyone know of someone who can make a pdf injection/exploit to include rat in pdf?

please PM me.

I'm willing to pay.

Understalker - February 15, 2014, 4:39 pm

(Feb 11, 2014 10:44 PM)-Anco- Wrote: [\[CITE\]](#) Hey, if I am using DarkComet 5.3.1F and I am going to crypt it I should use on the Server Module the Minimalist "Quick" or Full Editor "Expert".

Any VPN that allows port forward? Not BlackShades, I bought it but it didnt work, it just wouldn't connect.

Also, when adding the port to my gateway, what is the LAN Port? 1604?

Thanks, -Anco-
Minimalist settings, definitely.

nVPN is by far the best.

Just repeat the same port you're using.

Understalker - February 20, 2014, 1:21 am

Time I changed this help desk a bit.

All high quality members will be given free crypts, new members can fuck off.

If you need assistance, let me know.

Gamer222 - February 20, 2014, 1:53 am

Hey, i wanted to ask some questions regarding using itself vs vbc/applaunch/svchost with my rat and crypter. As far as i understand, vbc/applaunch/svchost methods provide better runtime bypass. What are the cons of using these methods vs itself? Can i still update my slave every day with refuted stub, and delete the old server if i chose vbc/applaunch/svchost without causing any problems?

Understalker - February 20, 2014, 1:55 am

Not sure what you're trying to say but in all honesty i'd recommend simply just using basic features on your crypter if its from Hackforums.

I'd recommend updating your stub every 2 days.

Gamer222 - February 20, 2014, 2:06 am

(Feb 20, 2014 02:55 AM)Understalker Wrote: [\[CITE\]](#) Not sure what you're trying to say but in all honesty i'd recommend simply just using basic features on your crypter if its from Hackforums.

I'd recommend updating your stub every 2 days. Let me rephrase that. While crypting your server you can choose to inject in: 1. itself (i always used this one, drops your file to appdata or temp, you can see the process name in taskmanager) 2. svchost 3. applaunch 4. vbc.

As far as i understand, using injection methods 2,3 and 4 provide better runtime bypass. Is this correct? What are the negative points of using 2,3,4 methods versus 1? If i chose 2,3,4 can i still update my vics with a new server/delete the old?

Understalker - February 20, 2014, 2:40 am

As long as it is not dropped anywhere, and instead injected, you will be fine.

Saduto - February 20, 2014, 5:45 am

Hey Understalker, Sorry to bother you but will you be able to pm me when you start a crypting service of some sort ? I'm really in need.

Thanks in advanced ?

Harley Quinn - February 20, 2014, 6:59 am

Hello, what works better Darkcomet or njRat for a free rat?

(Mar 9, 2014 02:24 AM)haxcode Wrote: [\[CITE\]](#) i want to learn crypting and making server ud. i have .net experiences. what method do the crypters use to make the server ud/fud ?

I don't cover that, check the .NET section.

complexit1y - April 22, 2014, 8:11 am

Hello, there are some questions i got on darkcomet which seems like no one knows exactly, so here i am :p

1. The registry key on dc doesnt work, does it? Im looking to change sth in there, but its futile, because it doesnt work properly (like i after computer-> system, etc.; there are no subfolders or he loads a bunch off ??? subfolders which are not in the right directory)

2. The file manager "run as admin" doesnt work either, all it does is make a request on the remote desktop, making the screen black, so i wont be able to do anything and then it goes back to normal like nothing happened after a minute.

3. Darkcomet CMD isnt running as administrator? Whenever i input anything for registry keys it

says "access denied"

So yea, to sum it up... im looking for a way to change keys in the registry! Ive spent alot of time researching and i still havent find a way to bypass uac and change some keys in the registry, can you help me out? :,(
ty for even offering this support, much appreciated!!

Understalker - April 22, 2014, 9:40 pm

May be an issue with your crypter.

Make sure your crypter is compatible with the RAT.

Are you using little to no settings on Imminent and all the settings you want on the crypter itself?

Check out Instinct Crypter, probably one of the best crypters on the market.

Slumski - August 12, 2014, 8:48 am

9003 port is up but my rat isnt showing that i have ratted myself using sandboxie i have no antivirus firewall is off etc please add me :D

Use localhost (127.0.0.1) and try ratting yourself.

ogin123 - October 21, 2014, 7:25 pm

what do you mean ? can you add me on skype ive got everything setup but when im running the exe its not showing up ?

Understalker - October 21, 2014, 7:26 pm

(Oct 21, 2014 07:25 PM)ogin123 Wrote: [\[CITE\]](#) what do you mean ? can you add me on skype ive got everything setup but when im running the exe its not showing up ?

For your host (where you enter your NO-IP etc) enter 127.0.0.1

Cyrus - October 21, 2014, 7:28 pm

Goodluck with your helpdesk buddie!

ogin123 - October 21, 2014, 7:30 pm

Yep that worked so what now can i send it to people and it will show up on my screen or i can just use 127.0.0.1

Understalker - October 21, 2014, 7:31 pm

(Oct 21, 2014 07:30 PM)ogin123 Wrote: [\[CITE\]](#) Yep that worked so what now can i send it to people and it will show up on my screen or i can just use 127.0.0.1

You have to send it to your people using your No-IP now, e.g. imafag.no-ip.biz or whatever it is.

127.0.0.1 will only work for things on your network.

ogin123 - October 21, 2014, 7:34 pm

Now when i use my no-ip id it doesnt work but shows its running in sandboxie

Understalker - October 21, 2014, 7:35 pm

(Oct 21, 2014 07:34 PM)ogin123 Wrote: [\[CITE\]](#) Now when i use my no-ip id it doesnt work but shows its running in sandboxie

It will not work for you however when you run it on a user that is outside your network it will work.

Test it on anubis.iseclab.org if its not crypted.

ogin123 - October 21, 2014, 7:42 pm

so it will 100% work if i send it to other people and even when its encrypted?

Understalker - October 21, 2014, 7:45 pm

(Oct 21, 2014 07:42 PM)ogin123 Wrote: [\[CITE\]](#) so it will 100% work if i send it to other people and even when its encrypted?

As long as the crypter does not interfere with your stub, then yes.

ogin123 - October 21, 2014, 7:56 pm

i uploaded the file to the Anubis site and the rat didn't pop up what am i doing wrong ?

Understalker - October 21, 2014, 8:01 pm

(Oct 21, 2014 07:56 PM)ogin123 Wrote: [\[CITE\]](#) i uploaded the file to the Anubis site and the rat didn't pop up what am i doing wrong ?

Something with your settings must be off.

ogin123 - October 21, 2014, 8:04 pm

9003 is on TCP should i do it to TCP/UDP?

Understalker - October 21, 2014, 8:09 pm

(Oct 21, 2014 08:04 PM)ogin123 Wrote: [\[CITE\]](#) 9003 is on TCP should i do it to TCP/UDP?
Why are you using 9003 - I don't know if theres a service running on it already hence fucking it up but try something like 1604 for now.

Both if possible if not then just go with whatever.

ogin123 - October 21, 2014, 8:12 pm

i did 1604 its open but its still not working only localhost is working

Understalker - October 21, 2014, 8:22 pm

(Oct 21, 2014 08:12 PM)ogin123 Wrote: [\[CITE\]](#) i did 1604 its open but its still not working only localhost is working

Did you crypt the server you're testing?

ogin123 - October 21, 2014, 8:23 pm

nope i didnt encrypt anything just a normal server this never used to happen with my old router

Understalker - October 21, 2014, 8:38 pm

(Oct 21, 2014 08:23 PM)ogin123 Wrote: [\[CITE\]](#) nope i didnt encrypt anything just a normal server this never used to happen with my old router

Did you remake the stub using port 1604 lol?

ogin123 - October 21, 2014, 8:43 pm

Yes i used 1604 port and made a new exe

Understalker - October 21, 2014, 8:47 pm

(Oct 21, 2014 08:43 PM)ogin123 Wrote: [\[CITE\]](#) Yes i used 1604 port and made a new exe
Go on canyouseeme.org and see if your port is open please.

ogin123 - October 21, 2014, 11:47 pm

Yes it is open and sorry for the delay

Understalker - October 23, 2014, 2:00 pm

Hey, could you please crypt my server for me?

What RAT are you using: Dark Comet

Specific features: All the regular features such as startup, persistence, etc

Any other requests when crypting: If you can, spoof the server as a jpg

Icon: jpg icon

Rat link: ge.tt/48nD5K32/v/0

Thanks!

mac4you - November 2, 2014, 8:17 am

i am using USB Dongle witch have DHCP enabled , and i connect this with router TP LINK , now i have done already lots of time port forwarding,, but always my (cmd>ipconfig (ip4 adress)) this ip can open the port,, but there is other ip in my pc, i mean <http://www.canyouseeme.org/> here i see there is other ip, but my ipconfig is another ip ?? why ?? so i have no settings here to open the port on public ip, i mean that shows on <http://www.canyouseeme.org/> < so now who can hep me?? please do something

my al firewall is disable , and antivirus are closed ,, with my dongle usb i have used once upon a time it shows the port is open,, but in that case ,, my ipconfig < and <http://www.canyouseeme.org/> this website ip was same , but suddenly it has been changed

>>>Understalker<<< messaged me : text assistance is free, teamviewer assistance is not : is that is called help ? then why you guyz here ?

CreativeFX - November 2, 2014, 1:16 pm

What RAT are you using: Dark Comet

Specific features: All the regular features such as start up, persistence, disable task manager, etc

Any other requests when crypting: Nope

Icon: Netflix icon (gonna say its a netflix/minecraft generator)

HMFRULES - November 2, 2014, 3:42 pm

Thanks Understalker this really helped me, can you PM me a crypter. Thanks In advance.

Hassan Gazi - November 3, 2014, 5:46 am

Hello ?

Can you help me solve my problem?

I made a stub through DC, tested on myself and Anubis, worked perfectly but whenever I tried to use it with some crypter after crypting it, it never worked. All the crypters were free and had different detective ratios ranging from 2/55 to 20/55

Thanks in advance ?

HMFRULES - November 3, 2014, 4:32 pm

I don't receive My slaves at all :/

Understalker - November 3, 2014, 5:07 pm

I will answer everyones questions later when I am home, if its a crypt issue I'm not offering crypts, if you dont explain your problem thoroughly I wont help.

TheLegendaryBeast - November 3, 2014, 5:11 pm

Hey I would like to know if there is a way to crypt your RAT and turn it into a jpg file as I want to spread a pic but if I change the file extension my RAT no longer works. Please PM me the answer if you can help me! :)

monkeyboyctt - November 4, 2014, 2:12 pm

Hi i am using jspy and i got canyouseeme to see a service on the port yesterday but today it is not open? I need help to make sure i port forwarded correctly and that i set up my dns properly. Can you help me Skype monkeyboyctt.

HMFRULES - November 4, 2014, 6:27 pm

Got it working can anyone help me get slaves Pm please. Thanks in advance

picsliamc - November 4, 2014, 8:52 pm

Can you please help me in Port Forwarding ? Please . me have teamviewer I TRY ALL THE BEST I CAN DO but i can't portforwar

HMFRULES - November 5, 2014, 6:22 pm

How can I make the server run when they turn on their pc? Thanks in advance.

mac4you - November 6, 2014, 6:57 am

i am using USB Dongle witch have DHCP enabled , and i connect this with router TP LINK , now i have done already lots of time port forwarding,, but always my (cmd>ipconfig (ip4 adress)) this ip can open the port,, but there is other ip in my pc, i mean <http://www.canyouseeme.org/> here i see there is other ip, but my ipconfig is another ip ?? why ?? so i have no settings here to open the port on public ip, i mean that shows on <http://www.canyouseeme.org/> < so now who can hep me?? please do something

my al firewall is disable , and antivirus are closed ,, with my dongle usb i have used once upon a time it shows the port is open,, but in that case ,, my ipconfig < and <http://www.canyouseeme.org/> this website ip was same , but suddenly it has been changed

HMFRULES - November 6, 2014, 3:39 pm

Anyone know how if someone restarts their PC or turns it off when It turns back on they come back

to my slave list? Thanks in advance.

darkstarz - November 6, 2014, 10:23 pm

If I want to install a presently FUD rat on my PC and I turn off the AV's virus signature update off, can I expect it to remain FUD indefinitely? Thanks.

darkstarz - November 7, 2014, 11:34 am

(Nov 7, 2014 12:24 AM)Lalit Agarwal Wrote: [\[CITE\]](#) Why you will run your stub on your PC?

if you are talking about your slaves PC then it ok, yeah if you turn off the AV's virus signature update off then it will remain FUD. But how will you do so? and he will re-enable it in few days(when he will check the AV).

Welcome :)

Yeah, I meant my own PC (old one). I want to keep the AV on but will stop it from updating it's virus signature. I should just uninstall it altogether but I like the false sense of security ?

Joe Barbaro - November 8, 2014, 8:19 am

A little question for you.

I've set up a virtual machine with Windows 7, it is using a wireless network. I've also hooked it up to a VPN with portforwarding.

1. In my server settings, do I need to point the IP address to the IP of the VPN I'm using?
2. For example I will open port 1337 at my VPN hoster, do I also need to open that port on my router in my own wifi network?

Thanks in advance.

Kind regards,
Joe Barbaro

pow_pow_xd - January 6, 2015, 6:13 pm

could you help me re set up a RAT, i have been having some issues port forwarding and such again with my new router/modem i just got. ill pm you if i dont here from you soon please pm me your skype or something so i can contact you.

Understalker - February 9, 2015, 2:09 am

This is being ed back to the top, it is not Echo approved and will be ran by myself.

Yes, however be sure you don't change your VPN location/change the IP address or you will lose all your slaves. I'd recommend using something like FreeDNS or something of that sort instead.

2. No you do not have to open it on your home router, only your VPN.

SeenAGhost321 - February 9, 2015, 6:00 am

Hello, i need help setting up the portforwarding. Would I be able to add you on skype or something?

Understalker - February 9, 2015, 6:29 am

Sorry no, I can provide help through here, just explain me your problems.

miike.emerald - February 9, 2015, 8:18 am

I'm unsure on how to crypt my rat, is there a free crypter out there worth using?

Understalker - February 9, 2015, 8:19 am

(Feb 9, 2015 09:18 AM)miike.emerald Wrote: [\[CITE\]](#) I'm unsure on how to crypt my rat, is there a free crypter out there worth using?

Most free crypters are trash, check out ones in the marketplace.

Ooze - February 9, 2015, 8:23 am

Love your thread got two questions when I bind my RAT to a file and open in the RAT works and the file opens. But if I try to open it a second time the file doesn't open making it suspicious. Also you said you were offering a cryptic for free. I would love that thanks in advance!

Understalker - February 9, 2015, 8:26 am

(Feb 9, 2015 09:23 AM)C0deZilla Wrote: [\[CITE\]](#) Love your thread got two questions when I bind my RAT to a file and open in the RAT works and the file opens. The file shouldn't even be showing there, you can make an error pop up depending on your RAT and make it sound like its an issue on their end so it moves out the fishiness.

No longer providing crypts.

miike.emerald - February 9, 2015, 9:10 am

If I setup my rat correctly, crypt the file and spread successfully if I then use a vpn will the settings I have used in setup make the stub redundant because of the vpn or will it still work?

Ainan007 - February 9, 2015, 9:34 am

Hey can you crypt my stub?

It's made with NanoCore

Understalker - February 10, 2015, 11:06 pm

(Feb 9, 2015 10:10 AM)miike.emerald Wrote: [\[CITE\]](#) If I setup my rat correctly, crypt the file and spread successfully if I then use a vpn will the settings I have used in setup make the stub redundant because of the vpn or will it still work?

Depends if you're using a FreeDNS or not and if your ports open.

(Feb 9, 2015 10:34 AM)Ainan007 Wrote: [\[CITE\]](#) Hey can you crypt my stub?

I need help. I'm very sure I'm portforwarding right but when I try to check if it's open it won't work. I've even tried using RA4W VPN and it still does not work.

Understalker - February 12, 2015, 8:32 pm

Caged - February 27, 2015, 7:59 pm

`Is it possible you can crypt my server? :3

Understalker - February 27, 2015, 8:04 pm

(Feb 27, 2015 08:59 PM)Caged Wrote: [\[CITE\]](#) `Is it possible you can crypt my server? :3
No sorry I no longer do free crypts.

learnnow - April 2, 2015, 10:14 pm

hi,

i read various RAT and how they are crypt to not be detect. but in none of them. I see how to install without adminsite right. Out of all the RAT out there. which one is best for Installation without administer right, usb sharing, and no port opening(from client side). im pretty sure one RAT has to stand out with the best requirements.

mad respect for providing support on this site.

thank you

TheCockroach - April 4, 2015, 1:57 pm

(Feb 27, 2015 09:04 PM)Understalker Wrote: [\[CITE\]](#) No sorry I no longer do free crypts.
Hello Understalker! I normally wouldn't try to contact you this way, but since I can't PM you yet, and I just purchased a Lifetime of Skype Hacker, was needing to ask you about the serial. I just emailed you as well, to the email listed in the PP transaction. Try to get back with me soon, if at all possible. Thank you, and I apologize for hijacking this post just for this purpose haha! :)
